Sip Studies × Sipopedia Beverage Taxonomy

Guild > academy > subgenre > styles. Source data: data/guilds.json. Beer follows BJCP 2021 categories 1–34.

1. Cask Guild — Fermentation, transformation, and time (138 subgenres, 858 styles)

Grouped by maturation, cellar craft, and cellar-to-service.

1.1 Wine Academy (58 subgenres, 392 styles)

1.1.1 Testable Red
Cabernet Sauvignon · Merlot · Pinot Noir · Syrah/Shiraz · Grenache/Garnacha · Tempranillo · Sangiovese · Nebbiolo · Malbec · Zinfandel/Primitivo · Cabernet Franc · Gamay · Barbera · Mourvèdre/Monastrell

1.1.2 Testable White
Chardonnay · Sauvignon Blanc · Riesling · Pinot Grigio/Gris · Chenin Blanc · Gewürztraminer · Viognier · Albariño · Grüner Veltliner · Sémillon · Torrontés · Assyrtiko

1.1.3 Rosé
Provence rosé · Tavel · Rosado (Navarra) · Rosato · White Zinfandel

1.1.4 Sparkling
Champagne · Crémant · Cava · Prosecco · Franciacorta · Sekt · Pét-nat (ancestral method) · Lambrusco · Moscato d'Asti

1.1.5 Orange (Skin-Contact)
Georgian qvevri (Rkatsiteli) · Friulian Ribolla Gialla · Slovenian (Brda) skin-contact

1.1.6 Fortified
Port (Ruby/Tawny/Vintage) · Sherry (Fino/Manzanilla/Amontillado/Oloroso/PX) · Madeira · Marsala · Vermouth · Vin doux naturel

1.1.7 Dessert
Sauternes · Tokaji Aszú · Icewine/Eiswein · Beerenauslese/TBA · Vin Santo · Recioto · Late harvest

1.1.8 Non-Testable Red › France
Tannat · Petit Verdot · Carignan · Cinsault · Pinot Meunier · Négrette · Mondeuse · Poulsard · Trousseau · Fer Servadou

1.1.9 Non-Testable Red › Italy
Aglianico · Nero d'Avola · Montepulciano · Dolcetto · Corvina · Lagrein · Sagrantino · Nerello Mascalese · Teroldego · Schiava

1.1.10 Non-Testable Red › Spain & Portugal
Mencía · Bobal · Graciano · Prieto Picudo · Touriga Nacional · Touriga Franca · Baga · Castelão

1.1.11 Non-Testable Red › Central & Eastern Europe
Blaufränkisch · Zweigelt · St. Laurent · Kadarka · Plavac Mali · Xinomavro · Agiorgitiko · Fetească Neagră · Mavrud

1.1.12 Non-Testable Red › New World
Carménère (Chile) · País (Chile) · Pinotage (South Africa) · Bonarda (Argentina)

1.1.13 Non-Testable White › France
Marsanne · Roussanne · Melon de Bourgogne · Aligoté · Petit Manseng · Gros Manseng · Savagnin · Picpoul · Clairette · Mauzac

1.1.14 Non-Testable White › Italy
Garganega · Vermentino · Fiano · Greco · Falanghina · Cortese · Arneis · Trebbiano · Verdicchio · Friulano

1.1.15 Non-Testable White › Spain & Portugal
Verdejo · Godello · Macabeo (Viura) · Xarel·lo · Parellada · Palomino · Loureiro · Arinto · Encruzado

1.1.16 Non-Testable White › Central & Eastern Europe
Furmint · Hárslevelű · Welschriesling · Silvaner · Müller-Thurgau · Kerner · Rkatsiteli · Moschofilero · Malagousia

1.1.17 Non-Testable White › Other
Muscat of Alexandria · Colombard · Chasselas · Petite Arvine

1.1.18 Non-Vitis vinifera › Vitis labrusca
Concord · Catawba · Niagara · Isabella · Ives

1.1.19 Non-Vitis vinifera › Vitis riparia & rupestris
Vitis riparia (riverbank grape) · Vitis rupestris (rock grape) · Vitis berlandieri · Mainly rootstock parents — see Rootstocks

1.1.20 Non-Vitis vinifera › Vitis rotundifolia (Muscadine)
Scuppernong · Carlos · Noble · Magnolia

1.1.21 Non-Vitis vinifera › Vitis aestivalis
Norton (Cynthiana)

1.1.22 Non-Vitis vinifera › Interspecific Hybrids
Seyval Blanc · Vidal Blanc · Chambourcin · Baco Noir · Maréchal Foch · Traminette · Marquette · Frontenac · La Crescent

1.1.23 Non-Vitis vinifera › PIWI (Fungus-Resistant)
Regent · Solaris · Johanniter · Souvignier Gris · Cabernet Cortis · Muscaris · Divico

1.1.24 Vine Genetics › Clones
Pinot Noir Dijon 115 · Pinot Noir Dijon 667 · Pinot Noir Dijon 777 · Pinot Noir Pommard (UCD 4) · Pinot Noir Wädenswil (UCD 1A) · Chardonnay Dijon 76 · Chardonnay Dijon 96 · Chardonnay Wente · Cabernet Sauvignon 337 · Sangiovese Grosso (Brunello)

1.1.25 Vine Genetics › Mutations (Bud Sports)
Pinot Gris (from Pinot Noir) · Pinot Blanc · Pinot Meunier (chimera) · Grenache Blanc · Grenache Gris · Gewürztraminer (aromatic Savagnin Rose) · Chardonnay Musqué · Sauvignon Gris

1.1.26 Vine Genetics › Teinturiers (Red-Fleshed)
Alicante Bouschet · Saperavi · Petit Bouschet · Grand Noir de la Calmette · Gamay de Bouze · Rubired

1.1.27 Rootstocks › Riparia & Rupestris Types
Riparia Gloire de Montpellier · Rupestris du Lot (St. George) · 3309 Couderc · 101-14 Millardet et de Grasset · Schwarzmann

1.1.28 Rootstocks › Berlandieri × Riparia
5BB Kober · SO4 · 5C Teleki · 420A Millardet et de Grasset

1.1.29 Rootstocks › Berlandieri × Rupestris
110 Richter · 1103 Paulsen · 140 Ruggeri · 99 Richter

1.1.30 Rootstocks › Nematode-Resistant & Other
Freedom · Harmony · Dog Ridge · Ramsey (Salt Creek) · 1616 Couderc · Own-rooted (ungrafted)

1.1.31 Canopy Management › Training Systems
Single Guyot · Double Guyot · Bilateral cordon (spur-pruned) · Vertical shoot positioning (VSP) · Gobelet (bush vine) · Pergola · Lyre · Scott Henry · Smart-Dyson · Geneva Double Curtain · Sprawl

1.1.32 Canopy Management › Canopy Practices
Cane pruning · Spur pruning · Shoot thinning · Shoot positioning · Leaf removal · Hedging (topping) · Green harvest (crop thinning) · Cover crops

1.1.33 Winemaking Techniques › Red Winemaking
Destemming · Whole-cluster fermentation · Cold soak · Carbonic maceration · Pump-over (remontage) · Punch-down (pigeage) · Délestage (rack & return) · Extended maceration · Saignée · Malolactic conversion

1.1.34 Winemaking Techniques › White & Rosé Winemaking
Whole-bunch pressing · Skin contact · Cold settling (débourbage) · Cool fermentation · Lees aging (sur lie) · Bâtonnage · Direct-press rosé · Blocked malolactic

1.1.35 Winemaking Techniques › Sparkling Methods
Traditional method · Tank (Charmat) method · Ancestral method · Transfer method · Riddling (remuage) · Disgorgement · Dosage · Carbonation

1.1.36 Winemaking Techniques › Fortified & Oxidative
Mutage (fortification during fermentation) · Post-fermentation fortification · Flor (biological aging) · Oxidative aging · Estufagem (Madeira)

1.1.37 Winemaking Techniques › Finishing
Fining · Filtration · Cold stabilization · Blending

1.1.38 Barrel Toasting & Aging › Oak & Other Woods
American white oak (Quercus alba) · French sessile oak (Q. petraea) · French pedunculate oak (Q. robur) · Hungarian oak (Q. petraea) · Oregon oak (Q. garryana) · Mizunara (Q. mongolica, Japan) · Acacia (black locust) · Chestnut (Castanea sativa) · Cherry (Prunus avium) · Amburana (Brazil)

1.1.39 Barrel Toasting & Aging › French Oak Forests
Allier · Tronçais (Allier) · Nevers · Bertranges · Vosges · Limousin (wide grain, Cognac) · Jupilles

1.1.40 Barrel Toasting & Aging › Seasoning
Open-air seasoning (typically 24–36 months) · Kiln-dried staves · Rain & sun leaching of harsh tannins

1.1.41 Barrel Toasting & Aging › Toast Levels

Light toast · Medium toast · Medium-plus toast · Heavy toast · Toasted heads · Untoasted heads · See Spirits Academy: char levels

1.1.42 Barrel Toasting & Aging › Barrel Sizes
Blood tub (~40 L) · Quarter cask (~125 L) · American standard barrel (200 L / 53 gal) · Bordeaux barrique (225 L) · Burgundy pièce (228 L) · Hogshead (~250 L) · Puncheon (~450–500 L) · Sherry butt (~500 L) · Port pipe (~550–650 L) · Foudre / foeder (1,000 L+)

1.1.43 Barrel Toasting & Aging › New vs Used
New oak · First fill · Refill (second fill+) · Neutral oak (3+ uses) · Rejuvenated (re-toasted/re-charred) · Percentage new oak (wine élevage)

1.1.44 Wine-Based Drinks
Sangria · Spritzer · Wine cooler · Mulled wine · Kalimotxo (wine + cola)

1.1.45 Dealcoholized Wine (≤0.5% ABV)
Dealcoholized red · Dealcoholized white · Dealcoholized sparkling · Dealcoholized rosé

1.1.46 Aging Requirements › Rioja (DOCa)
Crianza · 2 yr (1 oak) · Reserva · 3 yr (1 oak, 6 mo btl) · Gran Reserva · 5 yr (2 oak, 2 btl) · White/Rosé Crianza · 18 mo (6 oak) · White/Rosé Reserva · 2 yr (6 oak) · White/Rosé Gran Reserva · 4 yr (6 oak) · Sparkling Reserva · 24 mo lees · Gran Añada sparkling · 36 mo lees

Standards: Barrels: oak of approx. 225 L (not 330 L); continuous barrel time; red Crianza = 2 calendar years; Gran Reserva red = 60 mo total, ≥24 oak + ≥24 bottle; sparkling = tirage to disgorgement. Source: Pliego de condiciones DOCa Rioja (consolidated 15-02-2024), riojawine.com [verified online 2026-10-12]

1.1.47 Aging Requirements › Ribera del Duero (DO)
Crianza · 2 yr (1 oak) · Reserva · 3 yr (1 oak) · Gran Reserva · 5 yr (2 oak)

Standards: Reds; oak barrels ≤330 L; remainder in bottle. Source: Pliego de condiciones DOP Ribera del Duero (DOUE 31-07-2023) [verified online 2026-10-12]

1.1.48 Aging Requirements › Spain: Generic Terms (Ley 24/2003 art. 3, repealed)
Noble · 18 mo · Añejo · 24 mo · Viejo · 36 mo · Crianza red · 2 yr (6 oak) · Reserva red · 3 yr (1 oak) · Gran Reserva red · 5 yr (18 mo oak) · Crianza white/rosé · 18 mo (6 oak) · Reserva white/rosé · 2 yr (6 oak) · Gran Reserva white/rosé · 4 yr (6 oak)

Standards: Historical national minima from Ley 24/2003 art. 3 (oak ≤330 L for Crianza/Reserva/Gran Reserva; ≤600 L for Noble/Añejo/Viejo). Art. 3 was repealed by Ley 6/2015; binding rules now sit in each DO/DOP pliego (often matching or stricter). Source: BOE-A-2003-13864; BOE-A-2015-5288 [verified online 2026-10-12]

1.1.49 Aging Requirements › Cava (DO)
Cava de Guarda · 9 mo · Cava Reserva · 18 mo · Cava Gran Reserva · 30 mo · Cava de Paraje Calificado · 36 mo

Standards: Time on lees in bottle (tirage to disgorgement); Gran Reserva & Paraje: Brut Nature/Extra Brut/Brut only. Source: Pliego DOP Cava; cava.wine categories [verified online 2026-10-12]

1.1.50 Aging Requirements › Sherry (Jerez-Xérès-Sherry)
All Sherry · avg 2+ yr · 12 Years · certified avg · 15 Years · certified avg · VOS · 20+ yr · VORS · 30+ yr

Standards: Average age of the solera/criaderas system; VOS/VORS certified lot by lot. Source: Pliego DOP Jerez (2024); sherry.wine special categories [verified online 2026-10-12]

1.1.51 Aging Requirements › Tuscany
Chianti Classico Riserva · 24 mo (3 btl) · Chianti Classico Gran Selezione · 30 mo (3 btl) · Brunello · 5 yr (2 oak, 4 mo btl) · Brunello Riserva · 6 yr (2 oak, 6 mo btl) · Rosso di Montalcino · release Sep 1 after harvest · Vino Nobile · 2 yr · Vino Nobile Riserva · 3 yr (6 mo btl) · Chianti Riserva · 24 mo (3 btl)

Standards: Chianti Classico clock starts Jan 1 after harvest; Brunello release Jan 1 of 5th year after harvest (Riserva 6th), oak of any size. Chianti DOCG (non-Classico) Riserva: ≥24 mo total, ≥3 mo bottle, clock from Jan 1 after harvest (WSET; consorzio guidance). Sources: Disciplinare Chianti Classico (DM 22-06-2023); Disciplinare Brunello di Montalcino; Disciplinare Vino Nobile; Chianti DOCG disciplinare [verified online 2026-10-12]

1.1.52 Aging Requirements › Piedmont, Veneto & Campania
Barolo · 38 mo (18 wood) · Barolo Riserva · 62 mo (18 wood) · Barbaresco · 26 mo (9 wood) · Barbaresco Riserva · 50 mo (9 wood) · Amarone · 2 yr · Amarone Riserva · 4 yr · Taurasi · 3 yr (12 wood) · Taurasi Riserva · 4 yr (18 wood)

Standards: Barolo/Barbaresco clock from Nov 1 of harvest year; release Jan 1 of 4th (Barolo) / 3rd (Barbaresco) year after harvest. Amarone clock from Jan 1 after harvest (Riserva from Nov 1). Sources: Disciplinari Barolo, Barbaresco (masaf.gov.it), Amarone (consorziovalpolicella.it), Taurasi [verified online 2026-10-12]

1.1.53 Aging Requirements › Italian Traditional-Method
Franciacorta · 18 mo lees · Franciacorta Satèn/Rosé · 24 mo lees · Franciacorta Millesimato · 30 mo lees · Franciacorta Riserva · 60 mo lees · Trento DOC · 15 mo lees · Trento Riserva · 36 mo lees

Standards: Riserva requires vintage on label. Sources: Disciplinare Franciacorta DOCG (07-05-2024); Disciplinare Trento DOC [verified online 2026-10-12]

1.1.54 Aging Requirements › Champagne & Crémant

Champagne NV · 15 mo from tirage · Champagne Vintage · 36 mo from tirage · Champagne NV lees · 12 mo · Crémant · 9 mo lees (12 mo to consumer) · Crémant du Jura · 12 mo before release

Standards: Champagne minimums from tirage date (cahier des charges AOC Champagne, INAO). Crémant AOC (e.g. Alsace, Bourgogne, Loire): ≥9 mo on lees in bottle; many also require ≥12 mo élevage from tirage before consumer release. Sources: INAO cahiers Crémant d'Alsace / de Bourgogne / de Loire; Crémant du Jura cahier [verified online 2026-10-12]

1.1.55 Aging Requirements › Jura & Vins Doux Naturels

Vin Jaune · 6 yr 3 mo (60 mo under voile) · Banyuls Grand Cru · 30 mo wood · Rivesaltes Ambré/Tuilé · to Aug 31, 2nd yr · Rivesaltes Hors d'Âge · 5 yr

Standards: Vin Jaune: release from January of 7th year, ≥60 months in oak under flor (voile). Sources: Cahiers des charges Côtes du Jura / Château-Chalon, Banyuls Grand Cru, Rivesaltes (INAO) [verified online 2026-10-12]

1.1.56 Aging Requirements › Port (IVDP)

Vintage · bottled by Jul 30, yr 3 · LBV · bottled yr 4–6 · Colheita · 7+ yr wood · Tawny Reserve · IVDP panel · Tawny 10/20/30/40/50/80 Years · indicated age

Standards: Vintage: approved year 2; LBV: approved year 4, bottled by Dec 31 of year 6. Indicated-age Tawny/White and Reserve are IVDP special categories (sensory/style approval, not a guaranteed arithmetic age of every component). Source: IVDP Categorias Especiais / Special Categories [verified online 2026-10-12]

1.1.57 Aging Requirements › Madeira (IVBAM)

Colheita · 5+ yr wood · Frasqueira · 20+ yr wood · 5/10/15/20/30/40/50 Years · indicated age

Standards: Frasqueira: single harvest, recommended variety, canteiro aging. Indicated-age ladder (5–50+) is an IVBAM category matched to organoleptic character (Portaria / IVBAM rules), not necessarily the arithmetic age of every lot. Sources: IVBAM; Portaria 39/2015 [verified online 2026-10-12]

1.1.58 Aging Requirements › Central Europe

Tokaji Aszú · 18 mo wood, release yr 3 · Tokaji Eszencia · no fixed minimum · Sekt Austria · 9 mo lees (6 mo Charmat) · Sekt Austria Reserve · 18 mo lees · Sekt Austria Große Reserve · 36 mo lees · Germany · no general aging minimum

Standards: Tokaj: release not before Jan 1 of 3rd year after harvest (Tokaj PDO specification, EU OJ C/2026/1380). Austrian PDO: Sekt Austria / Reserve / Große Reserve per Sektbezeichnungsverordnung (Klassik no longer permitted for new labels); Reserve & Große Reserve = traditional method only. Source: RIS Sektbezeichnungsverordnung; austrianwine.com [verified online 2026-10-12]

1.2 Beer Academy (47 subgenres, 220 styles)

1.2.1 1 Standard American Beer

American Light Lager · American Lager · Cream Ale · American Wheat Beer

1.2.2 2 International Lager

International Pale Lager · International Amber Lager · International Dark Lager

1.2.3 3 Czech Lager

Czech Pale Lager · Czech Premium Pale Lager · Czech Amber Lager · Czech Dark Lager

1.2.4 4 Pale Malty European Lager

Munich Helles · Festbier · Helles Bock

1.2.5 5 Pale Bitter European Beer

German Leichtbier · Kölsch · German Helles Exportbier · German Pils

1.2.6 6 Amber Malty European Lager

Märzen · Rauchbier · Dunkles Bock

1.2.7 7 Amber Bitter European Beer

Vienna Lager · Altbier

1.2.8 8 Dark European Lager

Munich Dunkel · Schwarzbier

1.2.9 9 Strong European Beer

Doppelbock · Eisbock · Baltic Porter

1.2.10 10 German Wheat Beer

Weissbier · Dunkles Weissbier · Weizenbock

1.2.11 11 British Bitter

Ordinary Bitter · Best Bitter · Strong Bitter

1.2.12 12 Pale Commonwealth Beer

British Golden Ale · Australian Sparkling Ale · English IPA

1.2.13 13 Brown British Beer

Dark Mild · British Brown Ale · English Porter

1.2.14 14 Scottish Ale

Scottish Light · Scottish Heavy · Scottish Export

1.2.15 15 Irish Beer
Irish Red Ale · Irish Stout · Irish Extra Stout

1.2.16 16 Dark British Beer
Sweet Stout · Oatmeal Stout · Tropical Stout · Foreign Extra Stout

1.2.17 17 Strong British Ale
British Strong Ale · Old Ale · Wee Heavy · English Barley Wine

1.2.18 18 Pale American Ale
Blonde Ale · American Pale Ale

1.2.19 19 Amber and Brown American Beer
American Amber Ale · California Common · American Brown Ale

1.2.20 20 American Porter and Stout
American Porter · American Stout · Imperial Stout

1.2.21 21 IPA
American IPA · Specialty IPA: Belgian IPA · Specialty IPA: Black IPA · Specialty IPA: Brown IPA · Specialty IPA: Red IPA · Specialty IPA: Rye IPA · Specialty IPA: White IPA · Specialty IPA: Brut IPA · Hazy IPA

1.2.22 22 Strong American Ale
Double IPA · American Strong Ale · American Barleywine · Wheatwine

1.2.23 23 European Sour Ale
Berliner Weisse · Flanders Red Ale · Oud Bruin · Lambic · Gueuze · Fruit Lambic · Gose

1.2.24 24 Belgian Ale
Witbier · Belgian Pale Ale · Bière de Garde

1.2.25 25 Strong Belgian Ale
Belgian Blond Ale · Saison · Belgian Golden Strong Ale

1.2.26 26 Monastic Ale
Trappist Single · Belgian Dubbel · Belgian Tripel · Belgian Dark Strong Ale

1.2.27 27 Historical Beer
Kellerbier · Kentucky Common · Lichtenhainer · London Brown Ale · Piwo Grodziskie · Pre-Prohibition Lager · Pre-Prohibition Porter · Roggenbier · Sahti

1.2.28 28 American Wild Ale
Brett Beer · Mixed-Fermentation Sour Beer · Wild Specialty Beer · Straight Sour Beer

1.2.29 29 Fruit Beer
Fruit Beer · Fruit and Spice Beer · Specialty Fruit Beer · Grape Ale

1.2.30 30 Spiced Beer
Spice, Herb, or Vegetable Beer · Autumn Seasonal Beer · Winter Seasonal Beer · Specialty Spice Beer

1.2.31 31 Alternative Fermentables Beer
Alternative Grain Beer · Alternative Sugar Beer

1.2.32 32 Smoked Beer
Classic Style Smoked Beer · Specialty Smoked Beer

1.2.33 33 Wood Beer
Wood-Aged Beer · Specialty Wood-Aged Beer

1.2.34 34 Specialty Beer
Commercial Specialty Beer · Mixed-Style Beer · Experimental Beer

1.2.35 Barrel Toasting & Aging › Barrel-Aged & Wood Beers
Bourbon barrel-aged imperial stout · Barrel-aged barleywine · Foeder-fermented beer · Wine-barrel sour · Brettanomyces aged in oak · Lambic in oak foudres · See Wine Academy: oak, toast, sizes

1.2.36 Flavored Malt & Hard Seltzer (outside BJCP)
Hard seltzer · Flavored malt beverage · Malt liquor · Hard root beer/soda · Hard tea

1.2.37 NA & Low-Alcohol Beer (outside BJCP)
Non-alcoholic lager (≤0.5% ABV) · Non-alcoholic IPA · Non-alcoholic stout · Radler/shandy

1.2.38 Cultivation & Raw Materials › Malts
Pilsner malt · Pale ale malt · Maris Otter · Vienna malt · Munich malt · Wheat malt · Rye malt · Crystal/caramel malts · Chocolate malt · Black (patent) malt · Roasted barley · Smoked malt · Acidulated malt

1.2.39 Cultivation & Raw Materials › Hops: US & Southern Hemisphere

Cascade · Centennial · Citra · Mosaic · Simcoe · Amarillo · Chinook · Galaxy (Australia) · Nelson Sauvin (NZ) · Motueka (NZ)

1.2.40 Cultivation & Raw Materials › Hops: European
Saaz · Hallertauer Mittelfrüh · Tettnanger · Spalter · East Kent Goldings · Fuggle · Styrian Golding

1.2.41 Science › Yeast & Microbes
Ale yeast (S. cerevisiae) · Lager yeast (S. pastorianus) · Kveik · Belgian/Saison yeast · Hefeweizen yeast · Brettanomyces · Lactobacillus · Pediococcus

1.2.42 Science › Water Profiles
Burton-on-Trent (high sulfate) · Pilsen (very soft) · Munich (carbonate) · Dublin (carbonate) · London · Dortmund · Vienna · Sulfate-to-chloride ratio

1.2.43 Production › Brewing Process
Malting (steep, germinate, kiln) · Milling · Mashing · Lautering · Sparging · Boil · Whirlpool · Wort chilling · Fermentation · Lagering/conditioning · Packaging

1.2.44 Techniques › Mash Methods
Single infusion · Step infusion · Single decoction · Double decoction · Triple decoction · Cereal mash · Protein rest · Saccharification rest

1.2.45 Techniques › Hopping Techniques
Bittering addition · Flavor/aroma addition · Whirlpool hop stand · Dry hopping · Biotransformation · First wort hopping · CO2 hop extract

1.2.46 Science › Measurements
Original gravity (OG) · Final gravity (FG) · ABV · IBU · SRM color · EBC color · Apparent attenuation · Degrees Plato

1.2.47 Aging Requirements › Aging Requirements
No legal aging minimums for beer · BJCP is a style guide, not law

Standards: US/EU beer style names (including barrel-aged styles) carry no legally mandated aging periods; BJCP and brewery trade guides are voluntary style references, not statute [verified online 2026-10-12]

1.3 Spirits Academy **(33 subgenres, 246 styles)**

1.3.1 American Whiskey
Bourbon · Straight Bourbon · Bottled-in-Bond · Tennessee Whiskey · Rye Whiskey · Wheat Whiskey · Corn Whiskey · American Single Malt

1.3.2 Scotch Whisky
Speyside · Highland · Lowland · Islay · Campbeltown · Islands (Highland sub-region) · Single Malt · Blended Malt · Single Grain · Blended Scotch

1.3.3 Irish Whiskey
Single Pot Still · Single Malt · Single Grain · Blended

1.3.4 Japanese Whisky
Single Malt · Blended · Grain

1.3.5 Other Whisk(e)y
Canadian Whisky · Indian Single Malt · Taiwanese Single Malt · Welsh Whisky

1.3.6 Gin
London Dry · Plymouth · Old Tom · Genever (Jenever) · Navy Strength · Contemporary/New Western · Sloe Gin (liqueur)

1.3.7 Rum
Light/White · Gold · Dark · Overproof · Spiced · Rhum Agricole (AOC Martinique) · Cachaça · Jamaican pot-still · Demerara (Guyana)

1.3.8 Agave
Tequila Blanco · Tequila Joven · Tequila Reposado · Tequila Añejo · Tequila Extra Añejo · Mezcal (Joven/Reposado/Añejo) · Mezcal Ancestral · Mezcal Artesanal · Raicilla · Sotol (Dasylirion) · Bacanora

1.3.9 Brandy
Cognac VS · Cognac VSOP · Cognac XO · Armagnac · Brandy de Jerez · Pisco (Peru/Chile) · Calvados · Grappa · Eau-de-vie (Kirsch/Poire Williams) · American brandy

1.3.10 Vodka
Grain vodka · Potato vodka · Grape vodka · Flavored vodka

1.3.11 Liqueurs
Amaro · Orange liqueur (Triple sec/Curaçao) · Herbal (Chartreuse/Bénédictine) · Anise (Pastis/Ouzo/Sambuca/Absinthe) · Coffee liqueur · Cream liqueur · Nut liqueur (Amaretto/Frangelico) · Fruit liqueur (Limoncello/Crème de cassis)

1.3.12 Asian Spirits

Baijiu: Strong aroma (nongxiang) · Baijiu: Light aroma (qingxiang) · Baijiu: Sauce aroma (jiangxiang) · Baijiu: Rice aroma (mixiang) · Shochu (honkaku) · Awamori · Soju · Arrack

1.3.13 Barrel Toasting & Aging › Char Levels
#1 char (light) · #2 char · #3 char (common for bourbon) · #4 char (alligator) · Toast + char (two-step) · See Wine Academy: oak, forests, sizes

1.3.14 Barrel Toasting & Aging › Cask Finishes
Ex-bourbon · Oloroso sherry · Pedro Ximénez (PX) sherry · Fino/Amontillado sherry · Port (ruby/tawny) · Madeira · Sauternes · Red wine · Rum cask · Cognac cask · Beer/stout cask

1.3.15 Barrel Toasting & Aging › Maturation Systems
Solera (criaderas y solera) · Angel's share (evaporation) · Dunnage warehouse · Rickhouse (rackhouse) · Palletized warehouse · Tropical maturation · Bottled-in-Bond (≥4 years, US)

1.3.16 Barrel Toasting & Aging › Agave Aging (NOM-006)
Tequila Reposado (≥2 months in oak) · Tequila Añejo (≥1 year, ≤600 L oak) · Tequila Extra Añejo (≥3 years, ≤600 L oak) · Cristalino (aged, then filtered)

1.3.17 Other Regional Spirits
Aquavit (akvavit) · Rakı · Arak · Pálinka · Slivovitz (šljivovica) · Singani · Feni

1.3.18 Cocktails (IBA) › The Unforgettables
Old Fashioned · Manhattan · Dry Martini · Negroni · Daiquiri · Whiskey Sour · Sidecar · Sazerac · Boulevardier · Martinez

1.3.19 Cocktails (IBA) › Contemporary Classics
Margarita · Mojito · Cosmopolitan · Moscow Mule · Mai Tai · Piña Colada · Bloody Mary · Caipirinha · Mimosa · French 75

1.3.20 Cocktails (IBA) › New Era Drinks
Espresso Martini · Spritz Veneziano · Penicillin · Paper Plane · Tommy's Margarita · Naked and Famous

1.3.21 Zero-Proof
Virgin cocktails (mocktails) · Non-alcoholic gin alternatives · Non-alcoholic whiskey alternatives · Non-alcoholic aperitif/bitter alternatives · Shrub-based drinks

1.3.22 Cultivation & Raw Materials › Raw Materials
Corn · Rye · Malted barley · Wheat · Sugarcane juice · Molasses · Grapes/wine · Apples & pears · Blue agave (A. tequilana Weber) · Potatoes · Sorghum · Rice

1.3.23 Cultivation & Raw Materials › Mash Bills
Bourbon (≥51% corn) · Rye whiskey (≥51% rye) · High-rye bourbon · Wheated bourbon · Single malt (100% malted barley) · Four-grain

1.3.24 Production › Fermentation
Sweet mash · Sour mash (backset) · Wash (distiller's beer) · Open vs closed fermenters · Dunder (Jamaican rum) · Solid-state fermentation (baijiu)

1.3.25 Production › Distillation
Pot still · Column (Coffey) still · Hybrid still · Alembic charentais · Double distillation · Triple distillation · Doubler/thumper · Heads (foreshots) · Hearts · Tails (feints) · Reflux · Proof & ABV

1.3.26 Production › Agave Production
Jimador harvest (coa) · Piñas · Earthen pit oven (mezcal) · Masonry horno · Autoclave · Diffuser (difusor) · Tahona (stone wheel) · Roller mill · Copper & clay pot stills

1.3.27 Techniques › Finishing & Bottling
Proofing (dilution) · Chill filtration · Non-chill filtered · Cask strength · Blending (vatting) · Caramel color (E150a) · See Barrel Toasting & Aging

1.3.28 Aging Requirements › Tequila (NOM-006)
Blanco/Plata · no aging (may rest <2 mo) · Joven/Oro · blend or abocado · Reposado · 2+ mo oak · Añejo · 1+ yr oak ≤600 L · Extra Añejo · 3+ yr oak ≤600 L

Standards: Blanco/Plata: no abocante, may mature <2 months in oak/encino (§4.36.1). Joven/Oro: blanco blended with reposado/añejo/extra añejo, or blanco mellowed with permitted abocado ingredients (§4.36.2). Aged classes: oak or holm-oak (encino), direct contact. Reposado has NO vessel-size limit and no legal upper bound (the popular '2–12 months' reflects that ≥1 yr in ≤600 L qualifies as Añejo). Source: NOM-006-SCFI-2012 §4.36 (DOF 13-12-2012) [verified online 2026-10-12]

1.3.29 Aging Requirements › Mezcal (NOM-070)
Blanco/Joven · no aging · Madurado en vidrio · 12+ mo glass · Reposado · 2–12 mo wood · Añejo · 12+ mo wood <1,000 L

Standards: Blanco o Joven: colorless, no post-distillation treatment [partially verified — secondary sources; NOM-070 text not retrieved]. Others — Source: NOM-070-SCFI-2016 (DOF 23-02-2017) [verified online 2026-10-12]

1.3.30 Aging Requirements › Whisk(e)y
Scotch · 3 yr oak ≤700 L · Japanese (JSLMA) · 3 yr wood ≤700 L · Irish · 3 yr wood · Canadian · 3 yr small wood · US Straight · 2 yr new charred oak · US age statement · required under 4 yr · Bottled-in-Bond · 4 yr, 100 proof · Bourbon · no

minimum (unless straight)

Standards: Scotch: Scotch Whisky Regulations 2009; Japanese: JSLMA standard (mandatory for members from Apr 1 2024); Irish: Irish Whiskey Act 1980 §1(3)(b) (wooden casks, ≥3 yr in Ireland/NI); Canadian: Food and Drug Regulations B.02.023 (≥3 yr small wood for whisky sold in Canada, except Bourbon/Tennessee); age claims: B.02.020(2)–(3). US: 27 CFR 5.74 & 5.88 [verified online 2026-10-12]

1.3.31 Aging Requirements › Grape & Fruit Brandy

Cognac VS · 2 yr · Cognac VSOP · 4 yr · Cognac Napoléon · 6 yr · Cognac XO · 10 yr · Cognac XXO · 14 yr · Armagnac VS · 1 yr · Armagnac VSOP · 4 yr · Armagnac XO · 10 yr · Calvados Fine · 2 yr · Calvados Vieux/Réserve · 3 yr · Calvados VSOP · 4 yr · Calvados XO · 6 yr

Standards: Age = youngest eau-de-vie, oak only. Cognac: BNIC/cahier des charges (arrêté 08-11-2018). Armagnac XO: BNIA raised minimum from 6 to 10 yr effective 1 Apr 2018 (aligned with Cognac XO); VS/VSOP/Napoléon per BNIA age accounts. Calvados: IDAC/cahier labels. Sources: BNIC; BNIA; INAO [verified online 2026-10-12]

1.3.32 Aging Requirements › Other Brandy & Pomace

Brandy de Jerez Solera · 6+ mo avg · Brandy de Jerez Solera Reserva · 1+ yr avg · Brandy de Jerez Solera Gran Reserva · 3+ yr avg · Pisco (Peru) · 3 mo rest, no wood · Grappa Invecchiata/Vecchia · 12 mo wood · Grappa Riserva/Stravecchia · 18 mo wood

Standards: Brandy de Jerez: average age in criaderas y solera (pliego IG Brandy de Jerez, MAPA/Consejo Regulador). Pisco: rest ≥3 months in glass, stainless steel or other neutral vessel (Reglamento DO Pisco). Grappa IG: invecchiata/vecchia ≥12 mo wood; riserva/stravecchia ≥18 mo wood under fiscal warehouse (disciplinare Grappa IG / Gazzetta Ufficiale) [verified online 2026-10-12]

1.3.33 Aging Requirements › Rum (Martinique AOC)

Élevé sous bois · 12 mo oak · Vieux · 3 yr oak <650 L · VO · 3 yr · VSOP · 4 yr · XO · 6 yr · Jamaica Rum GI · no age minimum · Barbados · no GI age minimum

Standards: Martinique: continuous aging; cahier des charges AOC Rhum de la Martinique (INAO). Jamaica Rum GI: permits unaged rum or rum aged in approved wood ≤250 L in Jamaica; age statement = youngest component (JIPO/BSJ GI docs). Barbados: no adopted rum GI age floor as of verification date [verified online 2026-10-12]

2. Steep Guild — Leaf, seed, culture, and extraction (64 subgenres, 415 styles)

Grouped by extraction, infusion, sensory calibration, and ritual.

2.1 Coffee Academy (30 subgenres, 208 styles)

2.1.1 Species

Arabica (Coffea arabica) · Robusta (Coffea canephora) · Liberica · Excelsa

2.1.2 Processing

Washed (wet) · Natural (dry) · Honey (pulped natural) · Wet-hulled (Giling Basah) · Anaerobic fermentation · Carbonic maceration

2.1.3 Roast Level

Light (cinnamon/New England) · Medium (City/American) · Medium-dark (Full City) · Dark (Vienna/French/Italian)

2.1.4 Espresso Drinks

Espresso · Ristretto · Lungo · Americano · Macchiato · Cortado · Flat white · Cappuccino · Latte · Mocha · Affogato

2.1.5 Brew Methods

Pour-over (V60/Chemex/Kalita) · French press · AeroPress · Moka pot · Siphon · Drip (batch brew) · Turkish (cezve) · Cold brew · Cold drip (Kyoto) · Phin (Vietnamese)

2.1.6 Barrel Toasting & Aging › Barrel-Aged Coffee

Green beans rested in bourbon barrels · Rum barrel-aged beans · Wine barrel-aged beans · Whiskey barrel-aged cold brew

2.1.7 Decaffeination

Swiss Water Process · CO2 (supercritical) process · Ethyl acetate (sugarcane) process · Methylene chloride (direct/indirect) process

2.1.8 Coffee Formats

Whole bean · Ground · Instant (freeze-dried) · Instant (spray-dried) · Single-serve pods/capsules · Coffee concentrate · Drip bags

2.1.9 Iced & Blended Drinks

Iced coffee · Iced latte · Nitro cold brew · Frappé (Greek) · Blended iced coffee (frappuccino-style) · Espresso tonic · Dalgona coffee · Shakerato

2.1.10 Cultivation & Raw Materials › Arabica Varieties

Typica · Bourbon · Caturra · Catuaí · Mundo Novo · Geisha (Gesha) · SL28 · SL34 · Pacamara · Maragogype · Villa Sarchi · Pink Bourbon

2.1.11 Cultivation & Raw Materials › Hybrids & Resistant Cultivars
Timor Hybrid · Catimor · Sarchimor · Castillo · Colombia · Ruiru 11 · Batian · Marsellesa · Obatã · Starmaya (F1 hybrid)

2.1.12 Cultivation & Raw Materials › Ethiopian Landraces
Ethiopian heirloom landraces · JARC 74110 · JARC 74112 · Kurume · Wolisho

2.1.13 Cultivation & Raw Materials › Robusta & Other Species
Robusta (C. canephora) clones · Conilon (Brazil) · Liberica · Excelsa (C. liberica var. dewevrei)

2.1.14 Cultivation & Raw Materials › Growing Conditions
Altitude (masl) · Shade-grown · Full sun · Agroforestry · Volcanic soils · Distinct dry season · Coffee belt (tropics)

2.1.15 Cultivation & Raw Materials › Origins: Africa & Arabia
Ethiopia (Yirgacheffe, Sidama, Guji) · Kenya (Nyeri, Kirinyaga) · Rwanda · Burundi · Uganda · Tanzania · Yemen

2.1.16 Cultivation & Raw Materials › Origins: Latin America
Colombia · Brazil · Guatemala · Costa Rica · Honduras · El Salvador · Panama · Peru · Mexico · Nicaragua · Bolivia

2.1.17 Cultivation & Raw Materials › Origins: Asia-Pacific
Sumatra · Java · Sulawesi · Papua New Guinea · India (Monsooned Malabar) · Vietnam · Yunnan · Hawaii (Kona)

2.1.18 Production › Harvest
Selective hand-picking · Strip picking · Mechanical harvesting · Ripeness sorting · Float sorting

2.1.19 Production › Wet Processing Steps
Pulping · Fermentation (dry or underwater) · Washing · Mechanical demucilaging · Drying

2.1.20 Production › Honey Grades
White honey · Yellow honey · Red honey · Black honey

2.1.21 Production › Experimental Processing
Anaerobic natural · Anaerobic washed · Carbonic maceration · Lactic process · Yeast-inoculated · Thermal shock · Co-fermented (infused) · Double fermentation

2.1.22 Production › Drying
Patio drying · Raised (African) beds · Mechanical dryers (guardiolas) · Target moisture 10–12% · Resting (reposo)

2.1.23 Quality & Standards › Milling & Grading
Hulling (parchment removal) · Polishing · Density sorting · Optical color sorting · Screen size grading · SCA specialty grade · Primary defects (black, sour, fungus) · Secondary defects (broken, insect, quakers)

2.1.24 Science › Roast Chemistry
Drying phase · Maillard reactions · Caramelization · Strecker degradation · Chlorogenic acid breakdown · CO2 degassing

2.1.25 Techniques › Roast Profile
Charge temperature · Turning point · Rate of rise (RoR) · First crack · Development time ratio · Second crack · Agtron color

2.1.26 Science › Extraction & Strength
Extraction yield (18–22%) · Total dissolved solids (TDS) · SCA brewing control chart · Brew ratio (~1:15–1:18) · Refractometer

2.1.27 Techniques › Brewing Variables
Grind size · Water temperature (90–96 °C) · Contact time · Agitation · Bypass · Espresso ratio (~1:2) · Pressure (~9 bar)

2.1.28 Science › Water for Coffee
SCA water standard (TDS ~150 mg/L) · Calcium hardness · Alkalinity (~40 mg/L) · pH ~7 · Chlorine-free

2.1.29 Quality & Standards › Cupping Protocol
SCA cupping form · Fragrance/aroma · Flavor · Aftertaste · Acidity · Body · Balance · Uniformity · Clean cup · Sweetness · Overall · Specialty = 80+ points

2.1.30 Quality & Standards › Flavor Wheel (SCA/WCR)
Fruity · Floral · Sweet · Nutty/cocoa · Spices · Roasted · Green/vegetative · Sour/fermented · Other (papery, chemical)

2.2 Tea Academy **(24 subgenres, 154 styles)**

2.2.1 White Tea
Silver Needle (Bai Hao Yin Zhen) · White Peony (Bai Mu Dan) · Shou Mei · Darjeeling white

2.2.2 Yellow Tea
Junshan Yinzhen · Meng Ding Huang Ya · Huoshan Huang Ya

2.2.3 Green Tea
Longjing (Dragon Well) · Bi Luo Chun · Gunpowder · Sencha · Gyokuro · Matcha · Hojicha · Genmaicha · Bancha

2.2.4 Oolong Tea
Tieguanyin · Da Hong Pao (Wuyi rock) · Dong Ding · Alishan high-mountain · Oriental Beauty · Dan Cong

2.2.5 Black Tea
Assam · Darjeeling · Ceylon · Keemun · Dian Hong (Yunnan) · Lapsang Souchong · English Breakfast blend · Earl Grey

2.2.6 Dark Tea
Sheng (raw) pu-erh · Shou (ripe) pu-erh · Liu Bao · Fu Zhuan (Anhua brick)

2.2.7 Herbal Tisanes
Rooibos · Honeybush · Chamomile · Peppermint · Hibiscus · Ginger · Lemongrass

2.2.8 Scented & Blended
Jasmine tea · Earl Grey (bergamot) · Lychee black · Rose black · Osmanthus oolong · Chai spice blend

2.2.9 Tea Drinks
Iced tea · Sweet tea (US South) · Milk tea · Chai latte · Matcha latte · London fog · Arnold Palmer (tea + lemonade)

2.2.10 Tea Formats
Loose leaf · Tea bags · Pyramid sachets · Compressed cakes/bricks · Powdered (matcha/instant) · RTD bottled tea

2.2.11 Cultivation & Raw Materials › Tea Plant Varieties
Camellia sinensis var. sinensis · Camellia sinensis var. assamica · Cambod (hybrid type)

2.2.12 Cultivation & Raw Materials › Notable Cultivars
Yabukita · Okumidori · Saemidori · Asatsuyu · Fuding Da Bai · Tieguanyin · Jin Xuan (TTES #12) · Qing Xin · Rou Gui · Shui Xian · Longjing #43 · AV2 (Darjeeling clone)

2.2.13 Cultivation & Raw Materials › Growing Regions
China (Fujian, Yunnan, Zhejiang, Anhui) · India (Darjeeling, Assam, Nilgiri) · Sri Lanka (Nuwara Eliya, Uva, Dimbula) · Japan (Shizuoka, Uji, Kagoshima) · Taiwan (Alishan, Nantou) · Kenya · Nepal (Ilam) · Vietnam

2.2.14 Cultivation & Raw Materials › Growing Practices
Elevation · Shading (kabuse, tencha) · Seasonal flushes (first, second, autumn) · Plucking table pruning · Organic/biodynamic · Old-tree (gushu) gardens

2.2.15 Cultivation & Raw Materials › Plucking Standards
Bud only · One bud, one leaf · One bud, two leaves · One bud, three leaves · Mature leaves (oolong, dark tea)

2.2.16 Production › Processing Steps
Withering · Bruising/shaking (oolong) · Rolling · Oxidation · Kill-green (sha qing) · Drying/firing · Sorting · Roasting

2.2.17 Production › Kill-Green Methods
Pan-firing (wok) · Steaming (Japan) · Baking · Sun-drying (pu-erh maocha)

2.2.18 Production › Process by Tea Type
White: wither + dry · Yellow: kill-green + yellowing (men huang) · Green: kill-green + roll + dry · Oolong: partial oxidation · Black: full oxidation · Dark: heaping (wo dui) / aging

2.2.19 Production › Post-Processing
Compression (cakes, bricks) · Aging · Re-roasting · Scenting (jasmine) · Blending

2.2.20 Production › Japanese Processing
Aracha (crude tea) · Asamushi (light steam) · Fukamushi (deep steam) · Tencha (for matcha) · Stone-milling · Gyokuro shading (~3 weeks) · Hojicha roasting · Kukicha (stems) · Shiage (refining)

2.2.21 Production › Orthodox vs CTC
Orthodox rolling · CTC (crush, tear, curl) · Rotorvane · Fannings · Dust

2.2.22 Quality & Standards › Leaf Grades
OP (Orange Pekoe) · FOP · GFOP · TGFOP · FTGFOP · SFTGFOP · BOP (Broken OP) · Fannings · Dust · CTC grades (BP, PD)

2.2.23 Techniques › Brewing Methods
Western teapot · Gongfu cha (gaiwan, Yixing) · Grandpa style · Kyusu (Japanese) · Cold brew · Matcha whisking (chasen)

2.2.24 Techniques › Brewing Parameters
White/green ~70–85 °C · Oolong ~85–95 °C · Black/dark ~95–100 °C · Western ~2–3 g per 250 mL · Gongfu ~5–7 g per 100 mL · Multiple infusions · Soft water

2.3 Kombucha Academy **(10 subgenres, 53 styles)**

2.3.1 Culture & Fermentation
SCOBY (bacterial cellulose pellicle) · Starter liquid (backslopping) · Primary fermentation (F1) · Secondary fermentation (F2, bottle conditioning)

2.3.2 Base Teas
Black tea kombucha · Green tea kombucha · Oolong kombucha · White tea kombucha · Herbal/rooibos-base kombucha

2.3.3 Kombucha Styles

Original/plain · Fruit-flavored · Ginger · Botanical/herbal · Hard kombucha (>0.5% ABV)

2.3.4 Related Cultures
Jun (green tea and honey) · Kombucha vinegar

2.3.5 Science › SCOBY Microbes
Komagataeibacter xylinus · Acetobacter · Gluconobacter · Brettanomyces (Dekkera) · Zygosaccharomyces · Saccharomyces · Schizosaccharomyces · Lactobacillus (variable)

2.3.6 Science › SCOBY Biology
Bacterial cellulose pellicle · Yeast invertase splits sucrose · Yeast make ethanol · Bacteria oxidize ethanol to acetic acid · Gluconic & glucuronic acids

2.3.7 Production › Brewing Process
Sweet tea base (~50–100 g sugar/L) · Starter liquid (~10–20%) · Initial pH ≤4.6 · F1: 7–14 days at ~20–29 °C · Finished pH ~2.5–3.5 · F2: flavor & bottle · Refrigerate

2.3.8 Quality & Standards › Alcohol Control
Below 0.5% ABV = non-alcoholic (US TTB) · Hard kombucha ≥0.5% (TTB-regulated) · ABV lab testing · Cold chain · Yeast management

2.3.9 Techniques › Flavoring & Carbonation
Fruit juice · Whole fruit · Herbs & botanicals · Ginger · Bottle conditioning · Forced carbonation (kegging)

2.3.10 Quality & Standards › Quality & Safety
Mold (fuzzy, dry spots) · Kahm yeast · Fruit flies · Vinegar eels · Over-acidification · Food-safe vessels (no leaded glaze)

3. Source Guild — Origin, nourishment, and custody (41 subgenres, 267 styles)

Grouped by foundational ingredients, safe processing, freshness, and custody.

3.1 Water Academy (11 subgenres, 54 styles)

3.1.1 Spring Water
Natural spring · Artesian spring · Glacier/icecap water

3.1.2 Mineral Water
Low-mineral (<500 mg/L TDS) · Medium-mineral · High-mineral (>1500 mg/L TDS) · Naturally carbonated mineral

3.1.3 Sparkling Water
Carbonated (added CO2) · Seltzer

3.1.4 Purified Water
Distilled · Reverse osmosis · Deionized

3.1.5 Functional Water
Alkaline (ionized) · Electrolyte-enhanced · Flavored/infused · Hydrogen water

3.1.6 Tap & Treated
Municipal tap water · Private well water · Carbon-filtered · Boiled (point-of-use) · UV-treated

3.1.7 Cultivation & Raw Materials › Sources & Hydrogeology
Confined aquifers · Unconfined aquifers · Springs · Artesian wells · Surface water (lakes, rivers) · Glacial melt · Desalination

3.1.8 Production › Treatment
Coagulation & flocculation · Sedimentation · Sand filtration · Activated carbon · Reverse osmosis · Ion exchange (softening) · UV disinfection · Ozonation · Chlorination/chloramination · Remineralization

3.1.9 Science › Water Chemistry
TDS (mg/L) · Hardness (Ca, Mg) · Alkalinity (bicarbonate) · pH · Sodium · Silica · Nitrate · Conductivity

3.1.10 Quality & Standards › Standards
US EPA (Safe Drinking Water Act) · US FDA bottled water (21 CFR 165.110) · EU Natural Mineral Water Directive · WHO drinking-water guidelines

3.1.11 Techniques › Water for Beverages
SCA coffee water standard · Tea (soft, low-mineral) · Brewing water profiles (see Beer Academy) · Ice quality

3.2 Juice Academy (11 subgenres, 76 styles)

3.2.1 Product Types (FDA)
100% juice · Juice from concentrate · Nectar · Juice drink/cocktail · Smoothie · Lemonade · Limeade · Fruit punch

3.2.2 Processing

Not-from-concentrate (NFC) · Fresh-squeezed (unpasteurized, warning label) · Flash-pasteurized · Cold-pressed (HPP) · Frozen concentrate

3.2.3 Citrus
Orange · Grapefruit · Lemon · Lime · Tangerine/mandarin · Blood orange

3.2.4 Pome & Stone Fruit
Apple (cloudy/clear) · Pear · Tart cherry · Peach nectar · Apricot nectar

3.2.5 Berry & Grape
Concord grape · Cranberry · Pomegranate · Blueberry · Açaí · Elderberry

3.2.6 Tropical
Pineapple · Mango · Passion fruit · Guava · Papaya · Coconut water

3.2.7 Vegetable
Tomato · Carrot · Beet · Celery · Green juice (kale/spinach/cucumber) · Mixed vegetable juice

3.2.8 Cultivation & Raw Materials › Juice Fruit Varieties
Valencia orange · Hamlin orange · Pera orange (Brazil) · Gala apple · Fuji apple · Honeycrisp apple · Concord grape · Niagara grape · Wonderful pomegranate · Kent mango · Alphonso mango · MD2 pineapple

3.2.9 Production › Extraction
Washing & sorting · Citrus extractors (JBT/FMC, Brown) · Hydraulic press · Belt press · Rack-and-cloth press · Decanter centrifuge · Enzymatic maceration (pectinase) · Cold-press

3.2.10 Production › Processing
Clarification & fining · Deaeration · HTST pasteurization · Hot-fill · HPP (~600 MPa) · Evaporation (concentrate) · Aroma recovery · Aseptic storage

3.2.11 Quality & Standards › Quality & Regulation
Brix · Brix/acid ratio · FDA Juice HACCP (5-log reduction) · Unpasteurized warning label · Patulin limits (apple) · % juice labeling (21 CFR 101.30)

3.3 Milk Academy **(19 subgenres, 137 styles)**

3.3.1 Fat Level: Whole, 2%, 1%, Skim
Whole milk (≥3.25% milkfat) · Reduced-fat milk (2%) · Low-fat milk (1%) · Fat-free/skim milk (<0.5%)

Standards: Whole milk: 21 CFR 131.110

3.3.2 Cream & Cream Products › Fluid Creams
Half-and-half (10.5–18% fat) · Light (coffee) cream (18–30%) · Light whipping cream (30–36%) · Heavy cream (≥36%) · Whipping cream (30–36%, not std.) · Whipped cream (aerosol)

Standards: Half-and-half: §131.180; Light (coffee) cream: §131.155; Light whipping cream: §131.157; Heavy cream: §131.150

3.3.3 Cream & Cream Products › Cultured Creams
Sour cream · Acidified sour cream · Sour half-and-half · Acidified sour half-and-half · Crème fraîche

Standards: Sour cream: §131.160; Acidified sour cream: §131.162; Sour half-and-half: §131.185; Acidified sour half-and-half: §131.187

3.3.4 Cream & Cream Products › International & Dry Creams
Single cream (UK, ≥18%) · Double cream (UK, ≥48%) · Clotted cream (UK, ≥55%) · Dry cream

Standards: Dry cream: §131.149

3.3.5 Concentrated & Dry
Evaporated milk · Sweetened condensed milk · Concentrated milk · Nonfat dry milk · Dry whole milk

Standards: Evaporated milk: §131.130; Sweetened condensed milk: §131.120; Concentrated milk: §131.115; Nonfat dry milk: §131.125; Dry whole milk: §131.147

3.3.6 Cultured & Acidified Milks
Cultured buttermilk · Acidified milk · Drinkable yogurt (yogurt base) · See Fermented Academy: kefir, kumis · See Regional Academy: lassi, ayran, doogh

Standards: Cultured buttermilk: §131.112; Acidified milk: §131.111; Drinkable yogurt: §131.200

3.3.7 Flavored Milks
Chocolate milk · Strawberry milk · Vanilla milk · Banana milk · Coffee milk · Eggnog · Milkshake

Standards: Eggnog: §131.170

3.3.8 Processing
Raw (unpasteurized) · Pasteurized (HTST) · Vat (low-temperature) pasteurized · Ultra-pasteurized · UHT (aseptic, shelf-stable) · Homogenized · Non-homogenized (cream-top) · Lactose-free · A2 milk · Ultra-filtered (high-protein) · Organic (USDA NOP) · Grass-fed · Vitamin A & D fortified

3.3.9 By Species
Cow · Goat · Sheep · Water buffalo · Camel · Yak · Donkey · Mare

3.3.10 Plant Milks
Oat · Almond · Soy · Rice · Coconut · Cashew · Pea · Hemp · Macadamia · Flax · Hazelnut · Pistachio

3.3.11 Creamers
Dairy coffee creamer (half-and-half based) · Non-dairy creamer (liquid) · Non-dairy creamer (powder) · Oat creamer · Almond creamer · Coconut creamer

3.3.12 Cultivation & Raw Materials › Dairy Cattle Breeds
Holstein-Friesian · Jersey · Guernsey · Brown Swiss · Ayrshire · Milking Shorthorn · Normande · Montbéliarde · Gir · Sahiwal

3.3.13 Cultivation & Raw Materials › Goat & Sheep Breeds
Saanen · Alpine · Nubian · LaMancha · Nigerian Dwarf · East Friesian (sheep) · Lacaune (sheep) · Awassi (sheep)

3.3.14 Cultivation & Raw Materials › Farming & Feeding
Pasture-based (grass-fed) · Total mixed ration (TMR) · Silage · Hay · Free-stall housing · USDA organic (≥120 grazing days)

3.3.15 Production › Milking
Herringbone parlor · Parallel parlor · Rotary parlor · Robotic milking (AMS) · Teat dipping · Somatic cell count (SCC) · Bulk tank cooling (≤7 °C / 45 °F)

3.3.16 Science › Milk Components
Water (~87%) · Fat (~3.5–4%) · Protein (~3.3%) · Casein (~80% of protein) · Whey proteins (~20%) · Lactose (~4.8%) · Minerals (Ca, P) · A1 vs A2 β-casein · Fat globules

3.3.17 Production › Processing Steps
Receiving & testing · Clarification · Separation (cream/skim) · Standardization · Homogenization · HTST (72 °C / 15 s) · Ultra-pasteurization (≥138 °C / 2 s) · UHT aseptic · ESL (extended shelf life) · Microfiltration

3.3.18 Quality & Standards › Grading & Regulation
Grade A (Pasteurized Milk Ordinance) · Manufacturing grade (Grade B) · Antibiotic residue testing · Bacteria count limits · Raw milk sales (state law)

3.3.19 Production › Plant Milk Production
Soaking · Wet milling · Enzymatic hydrolysis (oat) · Filtering/decanting · Fortification (Ca, D, B12) · Homogenization · UHT

4. Energy Guild — Evidence, function, and stewardship (26 subgenres, 131 styles)

Grouped by health, supplements, protein systems, and energy formulations.

4.1 Health Academy (9 subgenres, 44 styles)

4.1.1 Hydration & Electrolytes
Oral rehydration solution (WHO ORS) · Isotonic sports drinks · Hypotonic electrolyte drinks · Electrolyte powders/tablets

4.1.2 Gut Health
Probiotic shots · Prebiotic/fiber drinks · Apple cider vinegar drinks

4.1.3 Functional Wellness
Vitamin-enhanced water · Collagen drinks · Ginger/turmeric shots · Golden milk (turmeric latte) · Mushroom elixirs (reishi/chaga)

4.1.4 Relaxation & Sleep
Magnesium drinks · L-theanine drinks · Melatonin drinks · Adaptogenic drinks (ashwagandha)

4.1.5 Medical Nutrition
Oral nutritional supplements · Diabetes-specific formulas · Infant formula · Thickened liquids (IDDSI levels 1–4)

4.1.6 Science › Electrolyte Science
Sodium · Potassium · Chloride · Magnesium · Calcium · Osmolality (hypo/iso/hypertonic) · Glucose-sodium co-transport (SGLT1)

4.1.7 Cultivation & Raw Materials › Functional Ingredients
Probiotic strains (Lactobacillus, Bifidobacterium) · Prebiotic fibers (inulin, FOS) · Collagen peptides · Ashwagandha · Curcumin (turmeric) · Ginger · Acetic acid (vinegar)

4.1.8 Quality & Standards › Regulation
Conventional food vs dietary supplement (DSHEA) · Structure/function claims · FDA health claims · Supplement Facts vs Nutrition Facts · Medical foods

4.1.9 Science › Evidence Levels
Meta-analyses & systematic reviews · Randomized controlled trials · Observational studies · Mechanistic & animal studies · Expert opinion

4.2 Protein Academy (9 subgenres, 47 styles)

4.2.1 Dairy Proteins
Whey protein concentrate · Whey protein isolate · Hydrolyzed whey · Micellar casein · Milk protein isolate

4.2.2 Plant Proteins
Pea · Soy isolate · Brown rice · Hemp · Pumpkin seed · Blended plant protein

4.2.3 Other Proteins
Egg white protein · Collagen peptides · Beef protein isolate

4.2.4 Formats
Powder (mix-in) · Ready-to-drink (RTD) shake · Clear whey isolate drinks · Protein coffee · High-protein ultra-filtered milk · Meal replacement shake

4.2.5 Use Cases
Post-workout recovery · Mass gainer · Weight management · Overnight (casein)

4.2.6 Production › Protein Processing
Microfiltration · Ultrafiltration · Ion exchange · Enzymatic hydrolysis · Spray drying · Instantizing (lecithin) · Concentrate (WPC 34–80%) · Isolate (≥90% protein)

4.2.7 Science › Protein Quality Science
PDCAAS · DIAAS · Leucine content · Essential amino acids · Fast (whey) vs slow (casein) digestion · Branched-chain amino acids

4.2.8 Techniques › Formulation
Heat stability (UHT RTD) · Emulsifiers & stabilizers · Sweeteners · Flavor masking · Protein per serving

4.2.9 Quality & Standards › Regulation & Testing
FDA protein claims (good/excellent source) · Supplement vs conventional food · NSF Certified for Sport · Informed Sport

4.3 Energy Academy (8 subgenres, 40 styles)

4.3.1 Energy Drinks
Standard energy drink · Sugar-free/zero · Energy shots · Fitness/performance energy · Natural/organic energy

4.3.2 Caffeine Sources
Caffeine anhydrous · Guarana · Green coffee extract · Green tea extract · Guayusa · Kola nut

4.3.3 Pre-Workout
Stimulant pre-workout · Stim-free (pump) pre-workout · Beta-alanine · Creatine monohydrate · L-citrulline

4.3.4 RTD Caffeinated
Canned cold brew · Nitro coffee · RTD tea · Caffeinated sparkling water

4.3.5 Focus & Nootropic
Caffeine + L-theanine · Citicoline/Alpha-GPC drinks · Lion's mane drinks

4.3.6 Science › Caffeine Science
Adenosine receptor antagonism · Half-life (~3–7 h) · ~80 mg per 250 mL can · FDA: ~400 mg/day healthy adults · EFSA: 200 mg single dose · CYP1A2 metabolism

4.3.7 Cultivation & Raw Materials › Other Ingredients
Taurine · B vitamins · Glucuronolactone · Ginseng · L-carnitine · Sugar vs non-nutritive sweeteners · Electrolytes

4.3.8 Quality & Standards › Regulation
Beverage vs supplement labeling · Caffeine disclosure · EU 'high caffeine content' label (>150 mg/L) · Restrictions on sales to minors (some countries)

5. Culture Guild — Carbonation, living systems, and what comes next (35 subgenres, 222 styles)

Grouped by living systems, carbonation, place, and shared traditions.

5.1 Carbonated Academy (10 subgenres, 61 styles)

5.1.1 Classic Soda Styles
Cola · Lemon-lime · Root beer · Ginger ale (dry/golden) · Cream soda · Orange soda · Grape soda · Pepper-style soda · Birch beer · Sarsaparilla

5.1.2 Mixers & Tonics
Tonic water · Club soda · Bitter lemon · Ginger beer (soft)

5.1.3 Modern Sodas
Prebiotic soda · Probiotic soda · Craft cane-sugar soda · Diet/zero-sugar soda · Italian soda · Sparkling juice

5.1.4 Cordials & Squashes
Squash (UK fruit concentrate) · Cordial · Drinking vinegar (shrub syrup) · Soda syrup

5.1.5 Carbonation Methods
Forced carbonation (CO2) · Natural carbonation (bottle-conditioned) · Nitrogenation (nitro) · Post-mix (fountain) · Pre-mix (bottle/can)

5.1.6 Science › Carbonation Science
CO2 solubility (Henry's law) · Volumes of CO2 · Soda ~2.5–4 volumes · Temperature & pressure · Carbonic acid · Nucleation & bubble retention

5.1.7 Production › Syrup Making
Simple syrup · Flavor concentrates & emulsions · Throw ratio (e.g. 1:5) · Brix targets · Batch mixing · Bag-in-box (post-mix)

5.1.8 Cultivation & Raw Materials › Sweeteners
Sucrose (cane sugar) · HFCS 55 · Aspartame · Sucralose · Acesulfame K · Stevia (Reb M) · Monk fruit · Erythritol · Allulose

5.1.9 Cultivation & Raw Materials › Acids & Preservatives
Phosphoric acid (colas) · Citric acid · Malic acid · Tartaric acid · Sodium benzoate · Potassium sorbate

5.1.10 Production › Packaging
Glass bottle · Aluminum can · PET bottle · Fountain (post-mix) · Keg

5.2 Fermented Academy (17 subgenres, 107 styles)

5.2.1 Sake Grades (Tokutei Meishoshu)
Junmai Daiginjo · Daiginjo · Junmai Ginjo · Ginjo · Tokubetsu Junmai · Tokubetsu Honjozo · Junmai · Honjozo

5.2.2 Sake Styles
Futsushu (table sake) · Nigori · Namazake · Genshu · Koshu (aged) · Taruzake · Sparkling sake · Kimoto · Yamahai

5.2.3 Cider
Modern/standard cider · Heritage cider · English cider · French cidre (Normandy/Brittany) · Spanish sidra (Asturias/Basque) · Ice cider (cidre de glace) · Hopped cider

5.2.4 Perry
Modern perry · Traditional perry (perry-pear varieties)

5.2.5 Mead
Traditional mead (dry/semi-sweet/sweet) · Melomel (fruit) · Cyser (apple) · Pyment (grape) · Metheglin (spice) · Braggot (malt) · Sack mead · Hydromel (session)

5.2.6 Barrel Toasting & Aging › Barrel & Wood Aging
Taruzake (Japanese cedar, sugi) · Barrel-aged cider (ex-bourbon/rum) · Normandy/Asturian cider in oak vats · Barrel-aged mead · See Wine Academy: oak, toast, sizes

5.2.7 Fermented Milks
Milk kefir · Kumis (mare's milk) · Drinkable yogurt · Lactobacillus fermented milk drink

5.2.8 Grain & Rice Ferments
Kvass · Boza · Amazake · Makgeolli · Chicha de jora

5.2.9 Plant & Fruit Ferments
Water kefir (tibicos) · Tepache · Pulque · Ginger beer (ginger bug) · Palm wine

5.2.10 Science › Kefir Microbiology
Kefir grains (kefiran matrix) · Lactobacillus kefiranofaciens · Lactococcus · Leuconostoc · Yeasts (Saccharomyces, Kluyveromyces) · Water kefir grains (dextran)

5.2.11 Science › Koji & Aspergillus
Aspergillus oryzae (yellow koji) · Aspergillus luchuensis (black koji, awamori) · Aspergillus sojae · Koji making (seikiku) · Saccharification

5.2.12 Cultivation & Raw Materials › Sake Rice & Polishing
Yamada Nishiki · Omachi · Gohyakumangoku · Miyama Nishiki · Seimaibuai (polishing ratio) · Daiginjo ≤50% · Ginjo ≤60% · Shinpaku (starchy heart)

5.2.13 Production › Sake Brewing Process
Washing & soaking · Steaming · Koji making · Shubo/moto (yeast starter) · Sandan shikomi (3-stage addition) · Moromi (main mash) · Multiple parallel fermentation · Pressing (jōsō) · Filtration · Hi-ire (pasteurization) · Aging

5.2.14 Techniques › Moto (Starter) Methods
Sokujō-moto · Kimoto · Yamahai-moto · Bodaimoto

5.2.15 Production › Cider Making

Sweet apples · Sharp apples · Bittersweet apples · Bittersharp apples · Milling & pressing · Wild vs cultured yeast · Keeving · Malolactic fermentation · Traditional method (cider) · Back-sweetening

5.2.16 Production › Mead Making
Honey varietals · Must preparation · Staggered nutrient additions (SNA) · Yeast selection · Degassing · Aging · Stabilize & back-sweeten

5.2.17 Aging Requirements › Sake & Cider Aging
Sake · no legal aging minimum · Koshu (aged sake) · informal/trade term · Cider & perry · no legal aging minimum

Standards: Japan National Tax Agency tokutei meishoshu standards define grade by polishing ratio and process, not aging time. BJCP cider/mead guidelines are style guides, not law [verified online 2026-10-12]

5.3 Regional Academy **(8 subgenres, 54 styles)**

5.3.1 Latin America
Horchata (Mexican rice) · Agua fresca · Chicha morada · Yerba mate · Tereré · Champurrado · Atole · Tejate · Aguapanela

5.3.2 Asia
Bubble tea (boba) · Masala chai · Lassi · Thai iced tea · Vietnamese iced coffee (cà phê sữa đá) · Hong Kong milk tea · Teh tarik · Sikhye · Barley tea (mugicha/boricha)

5.3.3 Middle East & Africa
Ayran · Doogh · Jallab · Sahlab · Moroccan mint tea · Qahwa (Arabic coffee) · Bissap/karkadé (hibiscus) · Sobia · Tamarind drink

5.3.4 Europe
Horchata de chufa (Valencia) · Kompot · Sbiten · Elderflower cordial · Mulled wine (Glühwein)

5.3.5 North America
Egg cream (New York) · Switchel (New England) · Sweet apple cider (unfiltered) · Root beer float · Hot chocolate

5.3.6 Caribbean & Pacific
Sorrel (Jamaica) · Mauby · Sea moss drink · Peanut punch · Kava (Fiji/Vanuatu/Tonga)

5.3.7 Techniques › Preparation: Americas
Mate: gourd & bombilla · Tereré: cold water/juice infusion · Horchata: soaked rice & cinnamon · Chicha de jora: malted corn ferment · Chicha morada: purple corn boil · Atole: masa cooked in water/milk

5.3.8 Techniques › Preparation: Asia & Beyond
Boba: tapioca pearls boiled & sugared · Masala chai: tea simmered with milk & spices · Teh tarik: 'pulled' between vessels · Thai tea: cloth-filter brew · Cà phê sữa đá: phin drip on condensed milk · Horchata de chufa: tiger nuts macerated

Glossary

Reviewed definitions only; entries flagged “needs review” in data/definitions.json are omitted here.

Cabernet Sauvignon — Red wine grape of Bordeaux origin, a natural cross of Cabernet Franc and Sauvignon Blanc; thick-skinned and tannic, widely planted worldwide.

Merlot — Red wine grape from Bordeaux, softer and earlier-ripening than Cabernet Sauvignon; a major blending partner on Bordeaux's Right Bank.

Pinot Noir — Thin-skinned red grape of Burgundy, also a core Champagne grape; known for light-to-medium body and sensitivity to site.

Syrah/Shiraz — Red grape from the northern Rhône (Syrah), called Shiraz in Australia; deeply colored with peppery, dark-fruit character.

Grenache/Garnacha — Warm-climate red grape (Garnacha in Spain), central to Southern Rhône blends and Priorat.

Tempranillo — Spain's leading red grape, the backbone of Rioja and Ribera del Duero (where it is called Tinto Fino).

Sangiovese — Italy's most planted red grape and the base of Chianti, Brunello di Montalcino and Vino Nobile.

Nebbiolo — Late-ripening, high-tannin, high-acid red grape of Piedmont, used for Barolo and Barbaresco.

Malbec — Red grape originally from southwest France (Cahors), now best known from Argentina.

Zinfandel/Primitivo — Red grape genetically identical to Croatian Tribidrag; known as Zinfandel in California and Primitivo in Puglia.

Cabernet Franc — Red grape from Bordeaux and the Loire; a parent of Cabernet Sauvignon and Merlot.

Gamay — Red grape of Beaujolais, making light, fruity reds.

Barbera — High-acid, low-tannin red grape of Piedmont, Italy (e.g. Barbera d'Asti, Barbera d'Alba).

Mourvèdre/Monastrell — Late-ripening red grape of Spain (Monastrell) and southern France (Mourvèdre, e.g. Bandol).

Chardonnay — White grape of Burgundy and Champagne; flexible in style from lean and unoaked to rich and barrel-fermented.

Sauvignon Blanc — Aromatic white grape from the Loire and Bordeaux, typically high in acidity with herbaceous or citrus aromas.

Riesling — Aromatic white grape most associated with Germany and Alsace; high acidity, made from bone-dry to very sweet.

Pinot Grigio/Gris — Grey-pink-skinned mutation of Pinot Noir; called Pinot Grigio in Italy and Pinot Gris in France.

Chenin Blanc — High-acid white grape of the Loire Valley, made dry, sweet and sparkling; also important in South Africa.

Gewürztraminer — Very aromatic, pink-skinned white grape (an aromatic form of Savagnin), notable in Alsace.

Viognier — Aromatic white grape of the northern Rhône (Condrieu).

Albariño — Aromatic, high-acid white grape of Rías Baixas (Spain), called Alvarinho in Portugal.

Grüner Veltliner — Austria's signature white grape, often with peppery notes.

Sémillon — White grape of Bordeaux, the main grape of Sauternes and prone to noble rot.

Torrontés — Aromatic white grape and Argentina's signature white.

Assyrtiko — High-acid white grape originally from the Greek island of Santorini, making mineral, dry whites.

Provence rosé — Pale dry rosé from Provence, France's largest rosé-producing region.

Tavel — Rhône appellation that makes only rosé.

Rosado (Navarra) — Spanish rosé tradition of Navarra, typically made from Garnacha.

Rosato — Italian term for rosé.

White Zinfandel — Off-dry pink wine from Zinfandel, popularized in California in the 1970s–80s.

Champagne — Traditional-method sparkling wine from the Champagne AOC in France.

Crémant — French traditional-method sparkling wine made outside Champagne (e.g. Alsace, Loire, Burgundy, Jura).

Cava — Spanish traditional-method sparkling wine (DO Cava), mostly from Catalonia.

Prosecco — Italian sparkling wine from Glera grapes, usually made by the tank method.

Franciacorta — Traditional-method sparkling wine DOCG from Lombardy, Italy. It is made mainly from Chardonnay and Pinot Noir.

Sekt — German and Austrian term for sparkling wine.

Pét-nat (ancestral method) — 'Pétillant naturel', a sparkling wine made by the ancestral method.

Lambrusco — Family of red grapes and frizzante wines from Emilia-Romagna.

Moscato d'Asti — Lightly sparkling, sweet, low-alcohol wine from Moscato Bianco grapes in Piedmont.

Georgian qvevri (Rkatsiteli) — Georgian tradition of fermenting and aging wine, often with skins, in large buried clay vessels (qvevri). It is on UNESCO's intangible-heritage list.

Friulian Ribolla Gialla — White grape of Friuli and Slovenia (Rebula), often made in skin-contact amber styles.

Slovenian (Brda) skin-contact — Amber or orange wines from Goriška Brda, Slovenia, made from white grapes macerated on their skins.

Port (Ruby/Tawny/Vintage) — Fortified wine from the Douro Valley, Portugal. Ruby styles keep fresh fruit, Tawny styles are aged oxidatively in wood, and Vintage Port comes from a single declared year.

Sherry (Fino/Manzanilla/Amontillado/Oloroso/PX) — Fortified wines from the Jerez area of Andalusia, aged in soleras. Fino and Manzanilla age under flor, Oloroso ages oxidatively, Amontillado does both, and PX is sweet.

Madeira — Fortified wine from the Portuguese island of Madeira. It is aged with heat and oxygen, making it very long-lived.

Marsala — Fortified wine from western Sicily, made dry to sweet in several aging categories.

Vermouth — Aromatized wine flavored with botanicals, traditionally including wormwood.

Vin doux naturel — French fortified sweet wine made by mutage (adding spirit during fermentation), e.g. Banyuls.

Sauternes — Sweet white Bordeaux wine from Sémillon and Sauvignon Blanc affected by noble rot.

Tokaji Aszú — Hungarian sweet wine made by adding botrytized (aszú) berries to base wine or must.

Icewine/Eiswein — Sweet wine made from grapes frozen naturally on the vine and pressed while frozen.

Beerenauslese/TBA — German/Austrian Prädikat levels for sweet wines from individually selected overripe berries, often affected by noble rot. Trockenbeerenauslese (TBA) uses shriveled, raisined berries and is the sweeter of the two.

Vin Santo — Tuscan dessert wine made from dried grapes and aged in small casks (caratelli).

Recioto — Sweet wine of the Veneto made from dried grapes (appassimento), e.g. Recioto della Valpolicella.

Late harvest — Grapes picked later than normal for higher sugar, used to make sweeter wines.

Tannat — Very tannic red grape of Madiran, France, and Uruguay's signature grape.

Petit Verdot — Late-ripening red Bordeaux grape, used in small amounts for color and tannin.

Carignan — Late-ripening, high-acid, high-tannin red grape (Cariñena/Mazuelo in Spain). It is common in southern France, Priorat and Sardinia.

Cinsault — Heat-tolerant red grape of southern France, used widely in rosé and light reds. It is a parent of Pinotage.

Pinot Meunier — Red grape related to Pinot Noir, with downy leaves. It is one of Champagne's three main grapes.

Négrette — Red grape of Fronton, southwest France.

Mondeuse — Red grape of Savoie, France.

Poulsard — Pale-skinned red grape of the Jura (also called Ploussard).

Trousseau — Red grape of the Jura, also grown in Portugal as Bastardo.

Fer Servadou — Red grape of southwest France (e.g. Marcillac), also called Mansois or Braucol.

Aglianico — Tannic southern Italian red grape used for Taurasi and Aglianico del Vulture.

Nero d'Avola — Sicily's leading red grape.

Montepulciano — Red grape widely planted in central Italy (e.g. Montepulciano d'Abruzzo). It is not related to the Tuscan town of Montepulciano.

Dolcetto — Early-ripening red grape of Piedmont, making soft, fruity reds for early drinking.

Corvina — Main red grape of Valpolicella, Bardolino and Amarone.

Lagrein — Red grape of Alto Adige, Italy.

Sagrantino — Very tannic red grape of Montefalco, Umbria.

Nerello Mascalese — Red grape of Etna, Sicily, making pale, perfumed reds.

Teroldego — Red grape of Trentino, Italy.

Schiava — Red grape of Alto Adige (Vernatsch, Trollinger), making light reds.

Mencía — Red grape of northwest Spain (Bierzo, Ribeira Sacra), identical to Portugal's Jaen.

Bobal — Red grape of Utiel-Requena in Valencia, Spain. It is deeply colored and used for reds and rosés.

Graciano — Red grape of Rioja, used in small amounts for acidity, color and aroma.

Prieto Picudo — Red grape of León, Spain.

Touriga Nacional — Portuguese red grape, a key Port and Douro variety.

Touriga Franca — Widely planted Port and Douro red grape.

Baga — Thick-skinned, high-acid, tannic red grape of Bairrada, Portugal. It is also used for sparkling wine.

Castelão — Widely planted red grape of southern Portugal, also called Periquita.

Blaufränkisch — Central European red grape, Austria's leading red in Burgenland and called Kékfrankos in Hungary. It typically makes peppery, dark-fruited, fresh reds.

Zweigelt — Austria's most planted red grape, a cross of Blaufränkisch and St. Laurent.

St. Laurent — Austrian red grape related to the Pinot family, a parent of Zweigelt.

Kadarka — Red grape of Hungary and the Balkans, traditionally used in Bikavér.

Plavac Mali — Croatian red grape of the Dalmatian coast, an offspring of Tribidrag (Zinfandel).

Xinomavro — High-acid, tannic red grape of Naoussa, northern Greece.

Agiorgitiko — Red grape of Nemea in the Peloponnese, Greece. It makes soft, fruity reds as well as rosés.

Fetească Neagră — Indigenous red grape of Romania and Moldova.

Mavrud — Indigenous red grape of Bulgaria (Thracian Valley).

Carménère (Chile) — Red Bordeaux grape that is now rare in France. It survived in Chile, where it was long mistaken for Merlot until identified in 1994.

País (Chile) — Historic red grape of Chile, brought by Spanish settlers (Listán Prieto in Spain).

Pinotage (South Africa) — South African red cross of Pinot Noir and Cinsault (then called Hermitage), created in 1925.

Bonarda (Argentina) — Argentina's widely planted red Bonarda, identified as Douce Noir (Corbeau) from Savoie. It is not the same as Italian Bonarda.

Marsanne — White grape of the northern Rhône (Hermitage, Saint-Joseph), often blended with Roussanne.

Roussanne — Aromatic white grape of the northern Rhône, often blended with Marsanne.

Melon de Bourgogne — White grape of Muscadet in the western Loire, often aged on its lees (sur lie).

Aligoté — White grape of Burgundy, typically high in acidity. It is used for Bourgogne Aligoté and, traditionally, for the Kir cocktail.

Petit Manseng — White grape of Jurançon with small, thick-skinned berries, used for sweet and dry wines.

Gros Manseng — White grape of southwest France (Jurançon, Gascony), used for dry and sweet wines.

Savagnin — Jura white grape used for Vin Jaune. It is the same variety as Traminer.

Picpoul — Grape of the Languedoc, best known for high-acid Picpoul de Pinet whites.

Clairette — White grape of southern France, used for Clairette de Die sparkling wine and in Rhône blends.

Mauzac — White grape of Gaillac and Limoux, used in Blanquette de Limoux.

Garganega — Main white grape of Soave, Veneto.

Vermentino — White grape of Sardinia, Liguria and Provence (Rolle).

Fiano — White grape of Campania, Italy, best known for Fiano di Avellino.

Greco — White grape of Campania, Italy (e.g. Greco di Tufo).

Falanghina — Ancient white grape of Campania, Italy.

Cortese — White grape of Piedmont, used for Gavi.

Arneis — White grape of Roero in Piedmont, Italy, making aromatic, medium-bodied dry whites.

Trebbiano — Family of high-yield white Italian grapes (Ugni Blanc in France).

Verdicchio — White grape of the Marche, Italy.

Friulano — White grape of Friuli, Italy, formerly called Tocai Friulano (identical to Sauvignonasse).

Verdejo — White grape of Rueda, Spain.

Godello — White grape of northwest Spain (Valdeorras, Bierzo).

Macabeo (Viura) — White grape of Spain (called Viura in Rioja), one of the classic Cava grapes.

Xarel·lo — Catalan white grape, one of the three traditional Cava grapes.

Parellada — White Catalan grape, one of the three traditional Cava grapes.

Palomino — White grape that makes most Sherry.

Loureiro — Aromatic white grape of Vinho Verde, Portugal.

Arinto — Portuguese white grape that keeps high acidity even in warm climates. It is important in Bucelas and Vinho Verde (as Pedernã).

Encruzado — White grape of the Dão region, Portugal, used for structured dry whites.

Furmint — High-acid white grape that is the main variety of Tokaji.

Hárslevelű — Hungarian white grape, the second main grape of Tokaji.

Welschriesling — Central European white grape (Graševina, Olaszrizling), unrelated to Riesling.

Silvaner — White grape grown mainly in Franken and Rheinhessen, Germany, and in Alsace (Sylvaner).

Müller-Thurgau — White cross of Riesling and Madeleine Royale, bred in Geisenheim in 1882. It is high-yielding and early-ripening.

Kerner — German white cross of Trollinger (Schiava) and Riesling.

Rkatsiteli — High-acid white grape of Georgia, widely planted across the former USSR.

Moschofilero — Pink-skinned aromatic Greek grape of Mantinia, Peloponnese.

Malagousia — Aromatic Greek white grape revived from near-extinction in the late 20th century.

Muscat of Alexandria — Ancient aromatic white Muscat grape, used for wine, table grapes and raisins.

Colombard — White grape of southwest France, used for Cognac and Armagnac distillation and for fresh whites such as Côtes de Gascogne.

Chasselas — White grape most associated with Switzerland (Fendant in Valais). It makes delicate, low-acid dry whites.

Petite Arvine — White grape of the Valais, Switzerland.

Concord — Vitis labrusca-derived American grape with 'foxy' flavor, widely used for juice.

Catawba — American pink-red grape of Vitis labrusca heritage. It was historically important for 19th-century Ohio sparkling wine.

Niagara — White American grape of labrusca type, used for sweet wine and juice.

Isabella — American hybrid grape of Vitis labrusca origin, with 'foxy' flavor.

Ives — American red grape of labrusca type, historically used in the eastern US.

Vitis riparia (riverbank grape) — North American vine species, cold-hardy and phylloxera-resistant, used as a rootstock parent.

Vitis rupestris (rock grape) — North American vine species, deep-rooting, used as a rootstock parent.

Vitis berlandieri — North American vine species native to Texas, valued as a rootstock parent for lime tolerance.

Mainly rootstock parents — see Rootstocks — These American Vitis species are used mainly as parents of phylloxera-resistant rootstocks, not for wine; see the Rootstocks group.

Scuppernong — Bronze muscadine (Vitis rotundifolia) variety, the original muscadine named in North Carolina.

Carlos — Bronze-skinned muscadine (Vitis rotundifolia) variety grown in the southeastern US for wine and juice.

Noble — Spanish legal aging term (Ley 24/2003) for wine aged at least 18 months in total.

Magnolia — Bronze-skinned muscadine variety grown in the southeastern US.

Norton (Cynthiana) — Native American red grape (Vitis aestivalis lineage), Missouri's state grape.

Seyval Blanc — French-American hybrid white grape grown in England, New York and Canada.

Vidal Blanc — French-American hybrid white grape, widely used for Canadian icewine.

Chambourcin — French-American hybrid red grape, popular in the eastern US for its disease resistance and deep color.

Baco Noir — French-American hybrid red grape bred by François Baco from Folle Blanche and a Vitis riparia. It is grown in cool climates such as Ontario and New York.

Maréchal Foch — French-American hybrid red grape suited to cool climates.

Traminette — Hybrid white grape from Gewürztraminer parentage, bred in the US.

Marquette — Cold-hardy red hybrid grape from the University of Minnesota, a grandchild of Pinot Noir.

Frontenac — Cold-hardy red hybrid grape from the University of Minnesota.

La Crescent — Cold-hardy white hybrid grape from the University of Minnesota, with apricot-citrus aromas.

Regent — German fungus-resistant (PIWI) red grape bred at Geilweilerhof.

Solaris — Early-ripening German fungus-resistant (PIWI) white grape, suited to very cool climates.

Johanniter — German fungus-resistant (PIWI) white grape bred at Freiburg with Riesling as a parent.

Souvignier Gris — German fungus-resistant (PIWI) white grape bred at Freiburg.

Cabernet Cortis — German fungus-resistant (PIWI) red grape bred at Freiburg with Cabernet Sauvignon as a parent.

Muscaris — German fungus-resistant (PIWI) aromatic white grape with Solaris and Muscat parentage.

Divico — Swiss fungus-resistant red grape bred by Agroscope, with Gamaret as a parent.

Pinot Noir Dijon 115 — Widely planted Burgundian 'Dijon' clone of Pinot Noir.

Pinot Noir Dijon 667 — Burgundian 'Dijon' clone of Pinot Noir with small clusters.

Pinot Noir Dijon 777 — Burgundian 'Dijon' clone of Pinot Noir, known for deep color and dark fruit.

Pinot Noir Pommard (UCD 4) — Pinot Noir selection from Burgundy distributed by UC Davis, important in Oregon and California.

Pinot Noir Wädenswil (UCD 1A) — Swiss-origin Pinot Noir selection distributed by UC Davis.

Chardonnay Dijon 76 — One of the Burgundian 'Dijon' clones of Chardonnay, selected in France and widely planted in Oregon and elsewhere.

Chardonnay Dijon 96 — A Burgundian 'Dijon' clone of Chardonnay, used for still and sparkling wine.

Chardonnay Wente — The Wente selection, the historic Chardonnay clonal lineage behind much of California's Chardonnay. It is known for small, uneven ('hen and chicken') berries.

Cabernet Sauvignon 337 — A widely planted French certified clone of Cabernet Sauvignon. It is known for small clusters and concentrated fruit.

Sangiovese Grosso (Brunello) — Local name for the Sangiovese biotype used for Brunello di Montalcino.

Pinot Gris (from Pinot Noir) — Pink-grey-skinned color mutation of Pinot Noir.

Pinot Blanc — White mutation of Pinot Noir, grown in Alsace, Italy (Pinot Bianco) and Germany (Weissburgunder).

Pinot Meunier (chimera) — Meunier is a periclinal chimera: its outer cell layer carries a mutation that the inner tissue of Pinot Noir lacks.

Grenache Blanc — White-skinned form of Grenache, used in the Rhône, Roussillon and Spain.

Grenache Gris — Grey-pink-skinned form of Grenache, notable in Roussillon.

Gewürztraminer (aromatic Savagnin Rose) — Very aromatic, pink-skinned white grape (an aromatic form of Savagnin), notable in Alsace.

Chardonnay Musqué — Aromatic, Muscat-scented clonal variants of Chardonnay.

Sauvignon Gris — Pink-skinned mutation of Sauvignon Blanc.

Alicante Bouschet — Teinturier (red-fleshed) grape bred from Petit Bouschet and Grenache.

Saperavi — Teinturier red grape of Georgia, deeply colored.

Petit Bouschet — Teinturier red grape bred by Louis Bouschet from Aramon and Teinturier du Cher. It is a parent of Alicante Bouschet.

Grand Noir de la Calmette — Teinturier red grape bred by Henri Bouschet.

Gamay de Bouze — Teinturier (red-fleshed) mutation of Gamay.

Rubired — Californian teinturier hybrid grape, used for color and juice.

Riparia Gloire de Montpellier — Pure Vitis riparia rootstock selection. Low vigor and early ripening, suited to fertile soils.

Rupestris du Lot (St. George) — Vitis rupestris rootstock, deep-rooting and vigorous.

3309 Couderc — Rootstock from a Vitis riparia × V. rupestris cross. Moderately low in vigor and widely used in cool, deep, well-watered soils; it handles drought and lime poorly.

101-14 Millardet et de Grasset — Rootstock from a Vitis riparia × V. rupestris cross, bred in France in the 1880s. It is low-vigor and advances ripening, suited to fertile, moist soils, but it tolerates little drought or lime.

Schwarzmann — Rootstock from a Vitis riparia × V. rupestris cross with some nematode tolerance.

5BB Kober — Rootstock from a Vitis berlandieri × V. riparia cross, selected by Kober in Austria. It is vigorous and lime-tolerant.

SO4 — Rootstock from a Vitis berlandieri × V. riparia cross (Selection Oppenheim 4).

5C Teleki — Rootstock from a Vitis berlandieri × V. riparia cross, selected in Hungary. Moderate vigor and early ripening.

420A Millardet et de Grasset — Rootstock from a Vitis berlandieri × V. riparia cross. Low vigor, lime-tolerant and slow to establish; common in Champagne and Burgundy.

110 Richter — Rootstock from a Vitis berlandieri × V. rupestris cross. It is vigorous and drought-tolerant, widely used in dry Mediterranean vineyards.

1103 Paulsen — Rootstock from a Vitis berlandieri × V. rupestris cross, bred in Sicily. It is vigorous and tolerates drought and moderate salinity.

140 Ruggeri — Rootstock from a Vitis berlandieri × V. rupestris cross, bred in Sicily. It is very vigorous and tolerates drought and limestone soils.

99 Richter — Rootstock from a Vitis berlandieri × V. rupestris cross. Vigorous and drought-tolerant, used in warm regions.

Freedom — Nematode-resistant rootstock with Vitis champinii in its parentage, used in California.

Harmony — Nematode-resistant rootstock used in California.

Dog Ridge — Vigorous rootstock selection of Vitis champinii, tolerant of nematodes and drought.

Ramsey (Salt Creek) — Very vigorous Vitis champinii rootstock, tolerant of nematodes, drought and salinity.

1616 Couderc — Rootstock bred in France from a Vitis solonis × V. riparia cross. It is low-vigor and tolerates wet and somewhat saline soils.

Own-rooted (ungrafted) — A vine growing on its own roots rather than grafted onto a rootstock.

Single Guyot — Cane-pruning system that keeps one cane plus a renewal spur.

Double Guyot — Cane-pruning system that keeps two canes, one trained each way along the wire.

Bilateral cordon (spur-pruned) — Vine training in which a permanent arm (cordon) extends in two directions along a wire. Short spurs on the cordon are pruned each winter.

Vertical shoot positioning (VSP) — Trellis system where shoots are trained upward in a narrow vertical curtain.

Gobelet (bush vine) — Free-standing vine trained without wires into a goblet shape, common in hot, dry regions.

Pergola — Overhead trellis system, traditional in parts of Italy and northwest Spain.

Lyre — Divided-canopy trellis shaped like a U or lyre.

Scott Henry — Divided vertical trellis with upper shoots trained up and lower shoots trained down.

Smart-Dyson — Divided vertical trellis with upward and downward shoots, devised by Richard Smart and John Dyson.

Geneva Double Curtain — Divided-canopy trellis developed at Geneva, New York, with two hanging curtains of shoots.

Sprawl — Training with little shoot positioning, letting the canopy hang freely.

Cane pruning — Winter pruning that keeps one or two of last year's canes and ties them along the wire to bear the new crop. The Guyot system is an example.

Spur pruning — Winter pruning of last year's canes down to short spurs on a permanent cordon.

Shoot thinning — Removing excess or poorly placed shoots early in the season.

Shoot positioning — Training the season's new shoots into place on the trellis.

Leaf removal — Removing leaves around the grape clusters to improve air flow and sun exposure.

Hedging (topping) — Trimming the tops and sides of the vine canopy during the growing season.

Green harvest (crop thinning) — Removing some unripe bunches to reduce yield and concentrate the rest.

Cover crops — Plants grown between vine rows to manage soil erosion, structure, water and vine vigor.

Destemming — Separating grape berries from their stems before crushing or fermentation.

Whole-cluster fermentation — Fermenting red grapes with their stems still attached.

Cold soak — Holding crushed red grapes cold before fermentation to extract color and aroma.

Carbonic maceration — Whole, uncrushed grapes ferment inside a CO2-filled vessel, giving fruity, low-tannin reds (as in Beaujolais).

Pump-over (remontage) — Pumping fermenting red wine from the bottom of the tank over the skin cap to extract color and tannin.

Punch-down (pigeage) — Pushing the floating skin cap down into fermenting red wine to extract color and tannin.

Délestage (rack & return) — Draining fermenting red juice off the skins into another tank, then pouring it back over the cap to extract gently.

Extended maceration — Leaving red wine on its skins after fermentation ends to change tannin texture.

Saignée — Bleeding off juice from a red-wine tank early to make rosé and concentrate the remaining red.

Malolactic conversion — Bacterial conversion of malic acid into lactic acid, softening a wine's acidity.

Whole-bunch pressing — Pressing whole clusters without crushing, giving cleaner, lower-phenolic juice.

Skin contact — Leaving juice in contact with grape skins; for white grapes this makes 'orange' or amber wine.

Cold settling (débourbage) — Letting freshly pressed white juice rest cold so solids settle out before fermentation.

Cool fermentation — Fermenting at low temperatures (often around 10–16 °C for whites) to keep fresh, fruity aromas.

Lees aging (sur lie) — Leaving wine in contact with its spent yeast after fermentation to build texture and flavor.

Bâtonnage — Stirring the lees (spent yeast) back into a wine during aging to add texture.

Direct-press rosé — Rosé made by pressing red grapes right away, giving brief skin contact and pale color.

Blocked malolactic — Preventing malolactic fermentation (for example by cold, sulfur dioxide or filtration) so the wine keeps its sharper malic acidity.

Traditional method — Sparkling method in which the second fermentation happens in the bottle sold (as in Champagne and Cava).

Tank (Charmat) method — Sparkling method with the second fermentation in a pressurized tank (common for Prosecco).

Ancestral method — Sparkling method where wine is bottled before primary fermentation finishes, trapping its CO2.

Transfer method — Sparkling method with second fermentation in bottle, after which the wine is transferred to a tank, filtered and rebottled.

Riddling (remuage) — Gradually turning and tilting sparkling-wine bottles so sediment collects in the neck before disgorgement.

Disgorgement — Removing the frozen plug of yeast sediment from a traditional-method sparkling wine bottle.

Dosage — Sugar-and-wine mixture added after disgorgement, setting a sparkling wine's sweetness level.

Carbonation — Presence of dissolved CO2, which makes wine sparkling. It comes either from a second fermentation or from injected gas.

Mutage (fortification during fermentation) — Stopping fermentation by adding grape spirit, leaving natural sugar (used for Port and vins doux naturels).

Post-fermentation fortification — Adding spirit after fermentation has finished, leaving a dry base that may be sweetened later. Sherry is the classic example.

Flor (biological aging) — A layer of yeast on the surface of Fino and Manzanilla Sherry that protects the wine from oxidation.

Oxidative aging — Aging with deliberate oxygen contact, giving nutty, dried-fruit flavors (e.g. Oloroso, tawny Port).

Estufagem (Madeira) — Madeira method of heating wine in tanks (estufas) to speed up aging.

Fining — Adding an agent (such as bentonite or egg white) that binds and removes haze or harsh compounds.

Filtration — Passing wine through a filter medium to remove yeast, bacteria or haze before bottling.

Cold stabilization — Chilling wine so tartrate crystals form and can be removed before bottling.

Blending — Combining wines from different grapes, vineyards, vessels or vintages to build balance and a consistent style.

American white oak (Quercus alba) — The main American barrel oak. Its staves are usually sawn rather than split, and it typically gives stronger vanilla and coconut notes than French oak.

French sessile oak (Q. petraea) — European oak species with tighter grain and more aromatic compounds, widely preferred for wine barrels.

French pedunculate oak (Q. robur) — European oak species, more porous and higher in tannin than sessile oak. It is traditionally preferred for spirits such as Cognac.

Hungarian oak (Q. petraea) — Sessile oak from Hungary's forests (e.g. Zemplén), used for barrels.

Oregon oak (Q. garryana) — Oak native to the Pacific Northwest, sometimes used for wine barrels.

Mizunara (Q. mongolica, Japan) — Japanese oak used for whisky casks. It is porous and hard to work, and is associated with sandalwood and incense aromas.

Acacia (black locust) — Wood of the black locust tree (Robinia pseudoacacia), sometimes used for white-wine barrels. It is commonly described as giving floral notes with little oak-style spice.

Chestnut (Castanea sativa) — Sweet chestnut wood, historically used for barrels in Italy and France. It is porous and low in aromatic compounds, so it allows oxygen exchange.

Cherry (Prunus avium) — Cherry wood, occasionally used for casks. It is commonly described as oxidizing wine faster and adding fruity, lightly sweet notes.

Amburana (Brazil) — Brazilian hardwood (Amburana cearensis) used for casks, especially for cachaça. It gives strong sweet-spice aromas often compared to cinnamon.

Allier — French département whose forests (including Tronçais) supply tight-grained sessile oak prized for wine barrels.

Tronçais (Allier) — Famous oak forest in the Allier, France, planted under Colbert, with tight-grained oak.

Nevers — Oak forests of the Nièvre, France, known for fine-grained oak.

Bertranges — Oak forest in the Nièvre, France, known for fine-grained sessile oak for barrels.

Vosges — Oak forests of the Vosges mountains, France, used for barrels.

Limousin (wide grain, Cognac) — Oak forests near Limoges, France, with wide-grained, tannic oak traditionally used for Cognac.

Jupilles — Oak forest in the Sarthe, France, used for barrels.

Open-air seasoning (typically 24–36 months) — Drying barrel staves outdoors so rain and sun leach harsh tannins before coopering.

Kiln-dried staves — Barrel staves dried quickly in kilns rather than seasoned outdoors.

Rain & sun leaching of harsh tannins — The effect of outdoor seasoning on staves: weather washes out bitter tannins and starts breaking down wood compounds.

Light toast — Barrel interior toasted briefly, keeping fresh wood character and less roasted flavor.

Medium toast — Middle toast level for barrels, balancing fresh oak with vanilla and toasty notes.

Medium-plus toast — Toast level between medium and heavy, giving more caramel and spice.

Heavy toast — Barrel interior toasted long and hot, giving roasted, smoky, coffee-like flavors.

Toasted heads — Barrel ends (heads) toasted like the staves, adding more toast flavor.

Untoasted heads — Barrel heads left untoasted, keeping more raw-wood character.

See Spirits Academy: char levels — Cross-reference: barrel char levels (#1–#4) are covered in the Spirits Academy.

Blood tub (~40 L) — Very small cask of about 40 litres. Its high wood-to-liquid ratio speeds wood extraction.

Quarter cask (~125 L) — Small cask that speeds up spirit maturation.

American standard barrel (200 L / 53 gal) — The common 53-gallon (~200 L) American oak barrel.

Bordeaux barrique (225 L) — Standard 225 L Bordeaux barrel.

Burgundy pièce (228 L) — Standard 228 L Burgundy barrel.

Hogshead (~250 L) — Cask of around 250 L, often rebuilt from bourbon barrels.

Puncheon (~450–500 L) — Large cask used for wine, rum and whisky.

Sherry butt (~500 L) — Traditional Sherry cask of around 500 L, often reused to age whisky.

Port pipe (~550–650 L) — Traditional Douro cask, used for Port and later often for whisky finishing.

Foudre / foeder (1,000 L+) — Large wooden vat, often over 1,000 L. Its low wood-to-liquid ratio gives little oak flavor.

New oak — A barrel used for the first time, giving the most oak flavor and tannin.

First fill — A cask used for the first time after its previous contents (e.g. first-fill ex-bourbon), giving more flavor than refill casks.

Refill (second fill+) — A cask reused after its first fill, giving less flavor each time.

Neutral oak (3+ uses) — Barrels used several times that now give little oak flavor but still allow slow oxygen exchange.

Rejuvenated (re-toasted/re-charred) — A used cask that has been scraped and re-toasted or re-charred to restore some of its flavor.

Percentage new oak (wine élevage) — Share of a wine aged in brand-new barrels, which controls how much oak flavor it gets.

Sangria — Spanish punch of wine, fruit, sweetener and often brandy.

Spritzer — Wine mixed with sparkling water.

Wine cooler — Wine-based drink mixed with fruit juice, sugar and carbonation.

Mulled wine — Wine heated with spices, sugar and often citrus.

Kalimotxo (wine + cola) — Basque drink of red wine mixed with cola, roughly half and half.

Dealcoholized red — Red wine made normally, then with most alcohol removed (e.g. by vacuum distillation or membranes). It is labeled non-alcoholic at or below 0.5% ABV.

Dealcoholized white — White wine with most alcohol removed after fermentation, typically to 0.5% ABV or less.

Dealcoholized sparkling — Sparkling wine with alcohol removed and carbonation restored, typically to 0.5% ABV or less.

Dealcoholized rosé — Rosé wine with most alcohol removed after fermentation, typically to 0.5% ABV or less.

Crianza · 2 yr (1 oak) — Crianza: official/legal aging category. Requirement: 2 yr (1 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Reserva · 3 yr (1 oak, 6 mo btl) — Reserva: official/legal aging category. Requirement: 3 yr (1 oak, 6 mo btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Gran Reserva · 5 yr (2 oak, 2 btl) — Gran Reserva: official/legal aging category. Requirement: 5 yr (2 oak, 2 btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

White/Rosé Crianza · 18 mo (6 oak) — White/Rosé Crianza: official/legal aging category. Requirement: 18 mo (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

White/Rosé Reserva · 2 yr (6 oak) — White/Rosé Reserva: official/legal aging category. Requirement: 2 yr (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

White/Rosé Gran Reserva · 4 yr (6 oak) — White/Rosé Gran Reserva: official/legal aging category. Requirement: 4 yr (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Sparkling Reserva · 24 mo lees — Sparkling Reserva: official/legal aging category. Requirement: 24 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Gran Añada sparkling · 36 mo lees — Gran Añada sparkling: official/legal aging category. Requirement: 36 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Reserva · 3 yr (1 oak) — Reserva: official/legal aging category. Requirement: 3 yr (1 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Gran Reserva · 5 yr (2 oak) — Gran Reserva: official/legal aging category. Requirement: 5 yr (2 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Noble · 18 mo — Spanish legal aging term (Ley 24/2003) for wine aged at least 18 months in total. Requirement: 18 mo.

Añejo · 24 mo — Añejo: official/legal aging category. Requirement: 24 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Viejo · 36 mo — Viejo: official/legal aging category. Requirement: 36 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Crianza red · 2 yr (6 oak) — Crianza red: official/legal aging category. Requirement: 2 yr (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Reserva red · 3 yr (1 oak) — Reserva red: official/legal aging category. Requirement: 3 yr (1 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Gran Reserva red · 5 yr (18 mo oak) — Gran Reserva red: official/legal aging category. Requirement: 5 yr (18 mo oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Crianza white/rosé · 18 mo (6 oak) — Crianza white/rosé: official/legal aging category. Requirement: 18 mo (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Reserva white/rosé · 2 yr (6 oak) — Reserva white/rosé: official/legal aging category. Requirement: 2 yr (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Gran Reserva white/rosé · 4 yr (6 oak) — Gran Reserva white/rosé: official/legal aging category. Requirement: 4 yr (6 oak). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Cava de Guarda · 9 mo — Cava de Guarda: official/legal aging category. Requirement: 9 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Cava Reserva · 18 mo — Cava Reserva: official/legal aging category. Requirement: 18 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Cava Gran Reserva · 30 mo — Cava Gran Reserva: official/legal aging category. Requirement: 30 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Cava de Paraje Calificado · 36 mo — Cava de Paraje Calificado: official/legal aging category. Requirement: 36 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

All Sherry · avg 2+ yr — All Sherry: official/legal aging category. Requirement: avg 2+ yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

12 Years · certified avg — 12 Years: official/legal aging category. Requirement: certified avg. Times are minimums unless stated; see facts for barrel/bottle detail and source.

15 Years · certified avg — 15 Years: official/legal aging category. Requirement: certified avg. Times are minimums unless stated; see facts for barrel/bottle detail and source.

VOS · 20+ yr — VOS: official/legal aging category. Requirement: 20+ yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

VORS · 30+ yr — VORS: official/legal aging category. Requirement: 30+ yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Chianti Classico Riserva · 24 mo (3 btl) — Chianti Classico Riserva: official/legal aging category. Requirement: 24 mo (3 btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Chianti Classico Gran Selezione · 30 mo (3 btl) — Chianti Classico Gran Selezione: official/legal aging category. Requirement: 30 mo (3 btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Brunello · 5 yr (2 oak, 4 mo btl) — Brunello: official/legal aging category. Requirement: 5 yr (2 oak, 4 mo btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Brunello Riserva · 6 yr (2 oak, 6 mo btl) — Brunello Riserva: official/legal aging category. Requirement: 6 yr (2 oak, 6 mo btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Rosso di Montalcino · release Sep 1 after harvest — Rosso di Montalcino: official/legal aging category. Requirement: release Sep 1 after harvest. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Vino Nobile · 2 yr — Vino Nobile: official/legal aging category. Requirement: 2 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Vino Nobile Riserva · 3 yr (6 mo btl) — Vino Nobile Riserva: official/legal aging category. Requirement: 3 yr (6 mo btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Chianti Riserva · 24 mo (3 btl) — Chianti Riserva: official/legal aging category. Requirement: 24 mo (3 btl). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Barolo · 38 mo (18 wood) — Barolo: official/legal aging category. Requirement: 38 mo (18 wood). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Barolo Riserva · 62 mo (18 wood) — Barolo Riserva: official/legal aging category. Requirement: 62 mo (18 wood). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Barbaresco · 26 mo (9 wood) — Barbaresco: official/legal aging category. Requirement: 26 mo (9 wood). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Barbaresco Riserva · 50 mo (9 wood) — Barbaresco Riserva: official/legal aging category. Requirement: 50 mo (9 wood). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Amarone · 2 yr — Amarone: official/legal aging category. Requirement: 2 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Amarone Riserva · 4 yr — Amarone Riserva: official/legal aging category. Requirement: 4 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Taurasi · 3 yr (12 wood) — Taurasi: official/legal aging category. Requirement: 3 yr (12 wood). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Taurasi Riserva · 4 yr (18 wood) — Taurasi Riserva: official/legal aging category. Requirement: 4 yr (18 wood). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Franciacorta · 18 mo lees — Traditional-method sparkling wine DOCG from Lombardy, Italy. It is made mainly from Chardonnay and Pinot Noir. Requirement: 18 mo lees.

Franciacorta Satèn/Rosé · 24 mo lees — Franciacorta Satèn/Rosé: official/legal aging category. Requirement: 24 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Franciacorta Millesimato · 30 mo lees — Franciacorta Millesimato: official/legal aging category. Requirement: 30 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Franciacorta Riserva · 60 mo lees — Franciacorta Riserva: official/legal aging category. Requirement: 60 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Trento DOC · 15 mo lees — Trento DOC: official/legal aging category. Requirement: 15 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Trento Riserva · 36 mo lees — Trento Riserva: official/legal aging category. Requirement: 36 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Champagne NV · 15 mo from tirage — Champagne NV: official/legal aging category. Requirement: 15 mo from tirage. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Champagne Vintage · 36 mo from tirage — Champagne Vintage: official/legal aging category. Requirement: 36 mo from tirage. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Champagne NV lees · 12 mo — Champagne NV lees: official/legal aging category. Requirement: 12 mo. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Crémant · 9 mo lees (12 mo to consumer) — French traditional-method sparkling wine made outside Champagne (e.g. Alsace, Loire, Burgundy, Jura). Requirement: 9 mo lees (12 mo to consumer).

Crémant du Jura · 12 mo before release — Crémant du Jura: official/legal aging category. Requirement: 12 mo before release. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Vin Jaune · 6 yr 3 mo (60 mo under voile) — Vin Jaune: official/legal aging category. Requirement: 6 yr 3 mo (60 mo under voile). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Banyuls Grand Cru · 30 mo wood — Banyuls Grand Cru: official/legal aging category. Requirement: 30 mo wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Rivesaltes Ambré/Tuilé · to Aug 31, 2nd yr — Rivesaltes Ambré/Tuilé: official/legal aging category. Requirement: to Aug 31, 2nd yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Rivesaltes Hors d'Âge · 5 yr — Rivesaltes Hors d'Âge: official/legal aging category. Requirement: 5 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Vintage · bottled by Jul 30, yr 3 — Vintage: official/legal aging category. Requirement: bottled by Jul 30, yr 3. Times are minimums unless stated; see facts for barrel/bottle detail and source.

LBV · bottled yr 4–6 — LBV: official/legal aging category. Requirement: bottled yr 4–6. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Colheita · 7+ yr wood — Colheita: official/legal aging category. Requirement: 7+ yr wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Tawny Reserve · IVDP panel — Tawny Reserve: official/legal aging category. Requirement: IVDP panel. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Tawny 10/20/30/40/50/80 Years · indicated age — Tawny 10/20/30/40/50/80 Years: official/legal aging category. Requirement: indicated age. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Colheita · 5+ yr wood — Colheita: official/legal aging category. Requirement: 5+ yr wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Frasqueira · 20+ yr wood — Frasqueira: official/legal aging category. Requirement: 20+ yr wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

5/10/15/20/30/40/50 Years · indicated age — 5/10/15/20/30/40/50 Years: official/legal aging category. Requirement: indicated age. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Tokaji Aszú · 18 mo wood, release yr 3 — Hungarian sweet wine made by adding botrytized (aszú) berries to base wine or must. Requirement: 18 mo wood, release yr 3.

Tokaji Eszencia · no fixed minimum — Tokaji Eszencia: official/legal aging category. Requirement: no fixed minimum. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Sekt Austria · 9 mo lees (6 mo Charmat) — Sekt Austria: official/legal aging category. Requirement: 9 mo lees (6 mo Charmat). Times are minimums unless stated; see facts for barrel/bottle detail and source.

Sekt Austria Reserve · 18 mo lees — Sekt Austria Reserve: official/legal aging category. Requirement: 18 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Sekt Austria Große Reserve · 36 mo lees — Sekt Austria Große Reserve: official/legal aging category. Requirement: 36 mo lees. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Germany · no general aging minimum — Germany: official/legal aging category. Requirement: no general aging minimum. Times are minimums unless stated; see facts for barrel/bottle detail and source.

American Light Lager — American Light Lager is a beer style in BJCP 2021 Style Guidelines category 1 Standard American Beer.

American Lager — American Lager is a beer style in BJCP 2021 Style Guidelines category 1 Standard American Beer.

Cream Ale — Cream Ale is a beer style in BJCP 2021 Style Guidelines category 1 Standard American Beer.

American Wheat Beer — American Wheat Beer is a beer style in BJCP 2021 Style Guidelines category 1 Standard American Beer.

International Pale Lager — International Pale Lager is a beer style in BJCP 2021 Style Guidelines category 2 International Lager.

International Amber Lager — International Amber Lager is a beer style in BJCP 2021 Style Guidelines category 2 International Lager.

International Dark Lager — International Dark Lager is a beer style in BJCP 2021 Style Guidelines category 2 International Lager.

Czech Pale Lager — Czech Pale Lager is a beer style in BJCP 2021 Style Guidelines category 3 Czech Lager.

Czech Premium Pale Lager — Czech Premium Pale Lager is a beer style in BJCP 2021 Style Guidelines category 3 Czech Lager.

Czech Amber Lager — Czech Amber Lager is a beer style in BJCP 2021 Style Guidelines category 3 Czech Lager.

Czech Dark Lager — Czech Dark Lager is a beer style in BJCP 2021 Style Guidelines category 3 Czech Lager.

Munich Helles — Munich Helles is a beer style in BJCP 2021 Style Guidelines category 4 Pale Malty European Lager.

Festbier — Festbier is a beer style in BJCP 2021 Style Guidelines category 4 Pale Malty European Lager.

Helles Bock — Helles Bock is a beer style in BJCP 2021 Style Guidelines category 4 Pale Malty European Lager.

German Leichtbier — German Leichtbier is a beer style in BJCP 2021 Style Guidelines category 5 Pale Bitter European Beer.

Kölsch — Pale, clean, top-fermented beer from Cologne.

German Helles Exportbier — German Helles Exportbier is a beer style in BJCP 2021 Style Guidelines category 5 Pale Bitter European Beer.

German Pils — German Pils is a beer style in BJCP 2021 Style Guidelines category 5 Pale Bitter European Beer.

Märzen — Märzen is a beer style in BJCP 2021 Style Guidelines category 6 Amber Malty European Lager.

Rauchbier — Rauchbier is a beer style in BJCP 2021 Style Guidelines category 6 Amber Malty European Lager.

Dunkles Bock — Dunkles Bock is a beer style in BJCP 2021 Style Guidelines category 6 Amber Malty European Lager.

Vienna Lager — Vienna Lager is a beer style in BJCP 2021 Style Guidelines category 7 Amber Bitter European Beer.

Altbier — Altbier is a beer style in BJCP 2021 Style Guidelines category 7 Amber Bitter European Beer.

Munich Dunkel — Munich Dunkel is a beer style in BJCP 2021 Style Guidelines category 8 Dark European Lager.

Schwarzbier — Schwarzbier is a beer style in BJCP 2021 Style Guidelines category 8 Dark European Lager.

Doppelbock — Doppelbock is a beer style in BJCP 2021 Style Guidelines category 9 Strong European Beer.

Eisbock — Eisbock is a beer style in BJCP 2021 Style Guidelines category 9 Strong European Beer.

Baltic Porter — Baltic Porter is a beer style in BJCP 2021 Style Guidelines category 9 Strong European Beer.

Weissbier — Bavarian wheat beer with banana and clove yeast character.

Dunkles Weissbier — Dunkles Weissbier is a beer style in BJCP 2021 Style Guidelines category 10 German Wheat Beer.

Weizenbock — Weizenbock is a beer style in BJCP 2021 Style Guidelines category 10 German Wheat Beer.

Ordinary Bitter — Ordinary Bitter is a beer style in BJCP 2021 Style Guidelines category 11 British Bitter.

Best Bitter — Best Bitter is a beer style in BJCP 2021 Style Guidelines category 11 British Bitter.

Strong Bitter — Strong Bitter is a beer style in BJCP 2021 Style Guidelines category 11 British Bitter.

British Golden Ale — British Golden Ale is a beer style in BJCP 2021 Style Guidelines category 12 Pale Commonwealth Beer.

Australian Sparkling Ale — Australian Sparkling Ale is a beer style in BJCP 2021 Style Guidelines category 12 Pale Commonwealth Beer.

English IPA — English IPA is a beer style in BJCP 2021 Style Guidelines category 12 Pale Commonwealth Beer.

Dark Mild — Dark Mild is a beer style in BJCP 2021 Style Guidelines category 13 Brown British Beer.

British Brown Ale — British Brown Ale is a beer style in BJCP 2021 Style Guidelines category 13 Brown British Beer.

English Porter — English Porter is a beer style in BJCP 2021 Style Guidelines category 13 Brown British Beer.

Scottish Light — Scottish Light is a beer style in BJCP 2021 Style Guidelines category 14 Scottish Ale.

Scottish Heavy — Scottish Heavy is a beer style in BJCP 2021 Style Guidelines category 14 Scottish Ale.

Scottish Export — Scottish Export is a beer style in BJCP 2021 Style Guidelines category 14 Scottish Ale.

Irish Red Ale — Irish Red Ale is a beer style in BJCP 2021 Style Guidelines category 15 Irish Beer.

Irish Stout — Irish Stout is a beer style in BJCP 2021 Style Guidelines category 15 Irish Beer.

Irish Extra Stout — Irish Extra Stout is a beer style in BJCP 2021 Style Guidelines category 15 Irish Beer.

Sweet Stout — Sweet Stout is a beer style in BJCP 2021 Style Guidelines category 16 Dark British Beer.

Oatmeal Stout — Oatmeal Stout is a beer style in BJCP 2021 Style Guidelines category 16 Dark British Beer.

Tropical Stout — Tropical Stout is a beer style in BJCP 2021 Style Guidelines category 16 Dark British Beer.

Foreign Extra Stout — Foreign Extra Stout is a beer style in BJCP 2021 Style Guidelines category 16 Dark British Beer.
British Strong Ale — British Strong Ale is a beer style in BJCP 2021 Style Guidelines category 17 Strong British Ale.
Old Ale — Old Ale is a beer style in BJCP 2021 Style Guidelines category 17 Strong British Ale.
Wee Heavy — Wee Heavy is a beer style in BJCP 2021 Style Guidelines category 17 Strong British Ale.
English Barley Wine — English Barley Wine is a beer style in BJCP 2021 Style Guidelines category 17 Strong British Ale.
Blonde Ale — Blonde Ale is a beer style in BJCP 2021 Style Guidelines category 18 Pale American Ale.
American Pale Ale — American Pale Ale is a beer style in BJCP 2021 Style Guidelines category 18 Pale American Ale.
American Amber Ale — American Amber Ale is a beer style in BJCP 2021 Style Guidelines category 19 Amber and Brown American Beer.
California Common — California Common is a beer style in BJCP 2021 Style Guidelines category 19 Amber and Brown American Beer.
American Brown Ale — American Brown Ale is a beer style in BJCP 2021 Style Guidelines category 19 Amber and Brown American Beer.
American Porter — American Porter is a beer style in BJCP 2021 Style Guidelines category 20 American Porter and Stout.
American Stout — American Stout is a beer style in BJCP 2021 Style Guidelines category 20 American Porter and Stout.
Imperial Stout — Strong, dark, intensely roasty stout.
American IPA — American IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: Belgian IPA — Specialty IPA: Belgian IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: Black IPA — Specialty IPA: Black IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: Brown IPA — Specialty IPA: Brown IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: Red IPA — Specialty IPA: Red IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: Rye IPA — Specialty IPA: Rye IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: White IPA — Specialty IPA: White IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Specialty IPA: Brut IPA — Specialty IPA: Brut IPA is a beer style in BJCP 2021 Style Guidelines category 21 IPA.
Hazy IPA — IPA style with high haze and juicy hop aroma and low perceived bitterness (BJCP 21C).
Double IPA — Double IPA is a beer style in BJCP 2021 Style Guidelines category 22 Strong American Ale.
American Strong Ale — American Strong Ale is a beer style in BJCP 2021 Style Guidelines category 22 Strong American Ale.
American Barleywine — American Barleywine is a beer style in BJCP 2021 Style Guidelines category 22 Strong American Ale.
Wheatwine — Wheatwine is a beer style in BJCP 2021 Style Guidelines category 22 Strong American Ale.
Berliner Weisse — Light, tart German wheat beer of low alcohol.
Flanders Red Ale — Flanders Red Ale is a beer style in BJCP 2021 Style Guidelines category 23 European Sour Ale.
Oud Bruin — Oud Bruin is a beer style in BJCP 2021 Style Guidelines category 23 European Sour Ale.
Lambic — Spontaneously fermented Belgian wheat beer from the Brussels area, aged in wood.
Gueuze — Blend of young and old lambic, refermented in the bottle.
Fruit Lambic — Fruit Lambic is a beer style in BJCP 2021 Style Guidelines category 23 European Sour Ale.
Gose — Tart German wheat beer made with salt and coriander.
Witbier — Witbier is a beer style in BJCP 2021 Style Guidelines category 24 Belgian Ale.
Belgian Pale Ale — Belgian Pale Ale is a beer style in BJCP 2021 Style Guidelines category 24 Belgian Ale.
Bière de Garde — Bière de Garde is a beer style in BJCP 2021 Style Guidelines category 24 Belgian Ale.
Belgian Blond Ale — Belgian Blond Ale is a beer style in BJCP 2021 Style Guidelines category 25 Strong Belgian Ale.
Saison — Belgian farmhouse-style pale ale, highly attenuated and often spicy (BJCP 25B).
Belgian Golden Strong Ale — Belgian Golden Strong Ale is a beer style in BJCP 2021 Style Guidelines category 25 Strong Belgian Ale.
Trappist Single — Trappist Single is a beer style in BJCP 2021 Style Guidelines category 26 Monastic Ale.
Belgian Dubbel — Belgian Dubbel is a beer style in BJCP 2021 Style Guidelines category 26 Monastic Ale.
Belgian Tripel — Belgian Tripel is a beer style in BJCP 2021 Style Guidelines category 26 Monastic Ale.
Belgian Dark Strong Ale — Belgian Dark Strong Ale is a beer style in BJCP 2021 Style Guidelines category 26 Monastic Ale.
Kellerbier — Kellerbier is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.
Kentucky Common — Kentucky Common is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.
Lichtenhainer — Lichtenhainer is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.
London Brown Ale — London Brown Ale is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.
Piwo Grodziskie — Piwo Grodziskie is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.
Pre-Prohibition Lager — Pre-Prohibition Lager is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.
Pre-Prohibition Porter — Pre-Prohibition Porter is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.

Roggenbier — Roggenbier is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.

Sahti — Sahti is a beer style in BJCP 2021 Style Guidelines category 27 Historical Beer.

Brett Beer — Brett Beer is a beer style in BJCP 2021 Style Guidelines category 28 American Wild Ale.

Mixed-Fermentation Sour Beer — Mixed-Fermentation Sour Beer is a beer style in BJCP 2021 Style Guidelines category 28 American Wild Ale.

Wild Specialty Beer — Wild Specialty Beer is a beer style in BJCP 2021 Style Guidelines category 28 American Wild Ale.

Straight Sour Beer — Straight Sour Beer is a beer style in BJCP 2021 Style Guidelines category 28 American Wild Ale.

Fruit Beer — Fruit Beer is a beer style in BJCP 2021 Style Guidelines category 29 Fruit Beer.

Fruit and Spice Beer — Fruit and Spice Beer is a beer style in BJCP 2021 Style Guidelines category 29 Fruit Beer.

Specialty Fruit Beer — Specialty Fruit Beer is a beer style in BJCP 2021 Style Guidelines category 29 Fruit Beer.

Grape Ale — Grape Ale is a beer style in BJCP 2021 Style Guidelines category 29 Fruit Beer.

Spice, Herb, or Vegetable Beer — Spice, Herb, or Vegetable Beer is a beer style in BJCP 2021 Style Guidelines category 30 Spiced Beer.

Autumn Seasonal Beer — Autumn Seasonal Beer is a beer style in BJCP 2021 Style Guidelines category 30 Spiced Beer.

Winter Seasonal Beer — Winter Seasonal Beer is a beer style in BJCP 2021 Style Guidelines category 30 Spiced Beer.

Specialty Spice Beer — Specialty Spice Beer is a beer style in BJCP 2021 Style Guidelines category 30 Spiced Beer.

Alternative Grain Beer — Alternative Grain Beer is a beer style in BJCP 2021 Style Guidelines category 31 Alternative Fermentables Beer.

Alternative Sugar Beer — Alternative Sugar Beer is a beer style in BJCP 2021 Style Guidelines category 31 Alternative Fermentables Beer.

Classic Style Smoked Beer — Classic Style Smoked Beer is a beer style in BJCP 2021 Style Guidelines category 32 Smoked Beer.

Specialty Smoked Beer — Specialty Smoked Beer is a beer style in BJCP 2021 Style Guidelines category 32 Smoked Beer.

Wood-Aged Beer — Wood-Aged Beer is a beer style in BJCP 2021 Style Guidelines category 33 Wood Beer.

Specialty Wood-Aged Beer — Specialty Wood-Aged Beer is a beer style in BJCP 2021 Style Guidelines category 33 Wood Beer.

Commercial Specialty Beer — Commercial Specialty Beer is a beer style in BJCP 2021 Style Guidelines category 34 Specialty Beer.

Mixed-Style Beer — Mixed-Style Beer is a beer style in BJCP 2021 Style Guidelines category 34 Specialty Beer.

Experimental Beer — Experimental Beer is a beer style in BJCP 2021 Style Guidelines category 34 Specialty Beer.

Bourbon barrel-aged imperial stout — Imperial stout matured in used bourbon barrels, picking up vanilla, oak and spirit notes.

Barrel-aged barleywine — Strong barleywine matured in wooden barrels, often ex-spirits casks.

Foeder-fermented beer — Beer fermented or aged in large wooden vats (foeders), often with mixed cultures.

Wine-barrel sour — Sour beer matured in used wine barrels.

Brettanomyces aged in oak — Beer matured in wood with Brettanomyces yeast, which slowly adds dry, funky, fruity character.

Lambic in oak foudres — Lambic fermented and aged in large oak vats, where resident microbes add to its character.

See Wine Academy: oak, toast, sizes — Cross-reference: oak species, toast levels and barrel sizes are covered in the Wine Academy.

Hard seltzer — Carbonated alcoholic water with flavoring, typically about 4–6% ABV, made from fermented sugar or malt.

Flavored malt beverage — US category of malt-based alcoholic drinks with added flavors; many 'hard' seltzers and teas fall in it.

Malt liquor — US term for strong, often adjunct-heavy lagers; legal definitions vary by state.

Hard root beer/soda — Alcoholic versions of soft drinks, often made as flavored malt beverages.

Hard tea — Alcoholic iced-tea drink, usually a flavored malt beverage.

Non-alcoholic lager (≤0.5% ABV) — Lager with no more than 0.5% ABV, made by dealcoholization or restricted fermentation.

Non-alcoholic IPA — IPA made with little or no alcohol, through dealcoholization or limited fermentation.

Non-alcoholic stout — Stout brewed or treated to contain at most about 0.5% ABV.

Radler/shandy — Beer mixed with lemonade or citrus soda.

Pilsner malt — Very pale base malt used for pale lagers.

Pale ale malt — Base malt kilned slightly more than pilsner malt, common in British and American ales.

Maris Otter — Traditional British two-row barley variety prized for pale ale malt.

Vienna malt — Lightly kilned malt with a toasty, malty character, used in Vienna lager and Märzen.

Munich malt — Kilned base malt that is darker than pilsner malt and gives a rich, bready flavor.

Wheat malt — Malted wheat, which adds protein for body and head retention.

Rye malt — Malted rye, adding spicy flavor; it can make the mash sticky.

Crystal/caramel malts — Malts stewed to crystallize sugars inside the grain, adding sweetness, body and caramel color.
Chocolate malt — Dark roasted malt that gives chocolate and coffee flavors.
Black (patent) malt — Very dark malt roasted at high temperature, used for color and sharp roast flavor.
Roasted barley — Unmalted barley roasted dark, giving the dry, coffee-like flavor of Irish stout.
Smoked malt — Malt dried over smoke (beechwood for Rauchbier, peat for some Scotch-style beers).
Acidulated malt — Malt coated with lactic acid, used in small amounts to lower mash pH (common under the German Reinheitsgebot).
Cascade — US hop released in 1972 with grapefruit and floral aroma; defined American Pale Ale.
Centennial — US hop with floral and citrus character, sometimes called a 'super Cascade'.
Citra — US aroma hop released in 2007, with strong tropical-fruit and citrus aroma.
Mosaic — US aroma hop with blueberry, tropical and pine notes.
Simcoe — US hop with pine and passion-fruit character.
Amarillo — US aroma hop with orange and citrus character.
Chinook — US dual-purpose hop with pine, resin and grapefruit character.
Galaxy (Australia) — Australian aroma hop with intense passion-fruit and citrus aroma.
Nelson Sauvin (NZ) — New Zealand hop known for white-wine and gooseberry aromas.
Motueka (NZ) — New Zealand aroma hop with lime and citrus character.
Saaz — Czech noble hop with mild, spicy aroma, classic in Czech pale lagers.
Hallertauer Mittelfrüh — Traditional German noble hop from the Hallertau, with mild floral-spicy aroma.
Tettnanger — German noble aroma hop from Tettnang.
Spalter — German noble-type aroma hop from Spalt, with mild, spicy aroma.
East Kent Goldings — Classic English aroma hop with soft, earthy, honeyed character.
Fuggle — Traditional English aroma hop with earthy, woody character.
Styrian Golding — Slovenian hop, genetically Fuggle-derived, with earthy, spicy aroma.
Ale yeast (S. cerevisiae) — Top-fermenting yeast working at warmer temperatures, often producing fruity esters.
Lager yeast (S. pastorianus) — Bottom-fermenting yeast that works at cool temperatures and gives clean flavors.
Kveik — Traditional Norwegian farmhouse ale yeasts that ferment cleanly at unusually high temperatures.
Belgian/Saison yeast — Ale yeast strains that give spicy, peppery and fruity character and often ferment very dry.
Hefeweizen yeast — Weizen ale yeast that produces banana-like (isoamyl acetate) and clove-like (4-vinyl guaiacol) aromas.
Brettanomyces — Wild yeast genus giving 'funky', earthy or fruity flavors; prized in some beers, a fault in most wines.
Lactobacillus — Lactic acid bacteria used to sour beers such as Berliner Weisse and Gose.
Pediococcus — Lactic acid bacteria used in sour beers such as lambic; it can produce diacetyl.
Burton-on-Trent (high sulfate) — English brewing town whose hard, sulfate-rich water accentuates hop bitterness in pale ales.
Pilsen (very soft) — Plzeň's very soft, low-mineral water, key to Czech pale lager.
Munich (carbonate) — Munich's carbonate-rich water suits dark, malty lagers such as Dunkel.
Dublin (carbonate) — Dublin's water is high in carbonate, which suits dark, roasty beers such as stout.
London — London's water is high in carbonate, historically suited to porters and brown beers.
Dortmund — German brewing city with moderately hard water, associated with the Dortmunder Export style.
Vienna — Vienna's water, associated with the Vienna lager style.
Sulfate-to-chloride ratio — Brewing-water balance: more sulfate sharpens hop bitterness, more chloride emphasizes malt fullness.
Malting (steep, germinate, kiln) — Turning grain into malt by soaking it, letting it sprout, then drying it in a kiln to develop enzymes and flavor.
Milling — Crushing malt to expose the starch while keeping husks intact for lautering.
Mashing — Steeping crushed malt in hot water so enzymes convert starch into fermentable sugars.
Lautering — Separating the sweet wort from spent grain after mashing.
Sparging — Rinsing the grain bed with hot water to collect remaining sugars.
Boil — Boiling the wort to sterilize it, isomerize hop acids and drive off unwanted compounds.
Whirlpool — Swirling hot wort after the boil to collect solids in the center; hops added here give aroma.
Wort chilling — Rapidly cooling boiled wort to fermentation temperature.
Fermentation — Yeast converting wort sugars into alcohol and CO2, also producing flavor compounds.
Lagering/conditioning — Cold maturation of beer after fermentation to clarify and smooth it.
Packaging — Putting finished beer into bottles, cans or kegs while limiting oxygen pickup.
Single infusion — Mash held at one temperature rest.
Step infusion — Mash raised through several temperature rests by heating or by adding hot water.
Single decoction — Mash method in which part of the mash is boiled once and returned to raise the temperature.

Double decoction — Mash method in which part of the mash is boiled and returned twice to raise the temperature.

Triple decoction — Mash method in which part of the mash is boiled and returned three times to step up temperature.

Cereal mash — Cooking unmalted grains such as corn or rice so their starch can be converted in the mash.

Protein rest — Mash rest at about 45–55 °C, meant to break down proteins; with modern well-modified malts it is often skipped.

Saccharification rest — Mash rest at about 62–72 °C, where amylase enzymes convert starch into sugars.

Bittering addition — Hops added early in the boil, so alpha acids isomerize and give bitterness.

Flavor/aroma addition — Hops added late in the boil, or after it, to keep their volatile aromas.

Whirlpool hop stand — Hops steeped in hot wort after the boil, below boiling, to extract aroma.

Dry hopping — Adding hops after the boil, usually during or after fermentation, for aroma without much bitterness.

Biotransformation — Chemical changes to hop aroma compounds caused by active yeast, e.g. when dry hopping during fermentation.

First wort hopping — Adding hops to the kettle as the wort is collected, before the boil.

CO2 hop extract — Hop resins extracted with supercritical CO2, used for consistent bittering.

Original gravity (OG) — Density of wort before fermentation, indicating its sugar content.

Final gravity (FG) — Density of beer after fermentation; the drop from OG shows how much sugar was fermented.

ABV — Alcohol by volume: the percentage of a drink's volume that is ethanol.

IBU — International Bitterness Units, a lab measure of iso-alpha acids that indicates beer bitterness.

SRM color — Standard Reference Method, the US scale for beer color.

EBC color — European Brewery Convention scale for beer and malt color.

Apparent attenuation — Percentage of the original gravity consumed by fermentation, as measured by a hydrometer.

Degrees Plato — Measure of wort or beer density expressed as percent sugar by weight.

No legal aging minimums for beer — No legal aging minimums for beer.

BJCP is a style guide, not law — BJCP is a style guide, not law.

Bourbon — US whiskey made from at least 51% corn and aged in new charred oak containers.

Straight Bourbon — Bourbon aged at least 2 years in new charred oak with no added coloring or flavoring.

Bottled-in-Bond — US designation: one distiller, one season, aged at least 4 years in a bonded warehouse, bottled at 100 proof.

Tennessee Whiskey — Whiskey made in Tennessee meeting bourbon rules; most is filtered through maple charcoal (Lincoln County Process).

Rye Whiskey — US whiskey made from at least 51% rye and aged in new charred oak.

Wheat Whiskey — US whiskey made from at least 51% wheat.

Corn Whiskey — US whiskey from at least 80% corn. If aged, it must be in used or uncharred new oak.

American Single Malt — US whiskey made from 100% malted barley at one distillery. The TTB recognized it as a formal category in 2024.

Speyside — Scotch whisky region along the River Spey, with the most distilleries.

Highland — The largest Scotch whisky region by area.

Lowland — Scotch whisky region in southern Scotland, historically triple-distilled.

Islay — Scotch whisky region on the island of Islay, known for peated malts.

Campbeltown — Scotch whisky region on the Kintyre peninsula.

Islands (Highland sub-region) — Scotch whiskies from the islands other than Islay (e.g. Skye, Orkney, Mull, Jura, Arran), grouped under the Highland region.

Single Malt — Malt whisky from 100% malted barley produced at a single distillery.

Blended Malt — Blend of single malts from more than one distillery, with no grain whisky.

Single Grain — Grain whisky from a single distillery.

Blended Scotch — Blend of malt and grain Scotch whiskies.

Single Pot Still — Irish whiskey from malted and unmalted barley, distilled in pot stills at one distillery.

Blended — A blend of malt (or pot still) whisky with grain whisky.

Grain — Whisky made from grains other than, or in addition to, malted barley, usually in column stills.

Canadian Whisky — Whisky made and aged in Canada for at least 3 years in small wood, often from blended grains.

Indian Single Malt — Malt whisky made in India, where warm climates speed up maturation.

Taiwanese Single Malt — Malt whisky made in Taiwan, matured quickly in a subtropical climate.

Welsh Whisky — Whisky distilled in Wales.

London Dry — Gin style with all flavor from redistillation with botanicals and no added flavoring after distillation (sugar strictly limited).

Plymouth — Gin made in Plymouth, England; it formerly had its own geographical indication.

Old Tom — Lightly sweetened historical gin style.

Genever (Jenever) — Dutch and Belgian juniper spirit based on malt wine, the forerunner of gin.

Navy Strength — Gin or rum bottled at about 57% ABV (100 UK proof).

Contemporary/New Western — Gin styles where juniper is less dominant and other botanicals lead.
Sloe Gin (liqueur) — Gin-based liqueur flavored with sloe berries.
Light/White — Unaged or lightly aged, often filtered, clear rum.
Gold — Lightly aged or colored rum, between white and dark.
Dark — Rum with deep color from longer aging, added caramel or molasses.
Overproof — Spirit bottled well above standard strength.
Spiced — Rum flavored with spices such as vanilla and cinnamon.
Rhum Agricole (AOC Martinique) — Rum distilled from fresh sugarcane juice rather than molasses.
Cachaça — Brazilian spirit distilled from fermented fresh sugarcane juice.
Jamaican pot-still — Jamaican rum made in pot stills, often very high in esters.
Demerara (Guyana) — Rum from Guyana, notably made on historic wooden stills.
Tequila Blanco — Unaged (or rested under 2 months) tequila; see Tequila aging rules (NOM-006).
Tequila Joven — Blend of blanco tequila with aged tequila, or blanco mellowed with permitted additives (abocado).
Tequila Reposado — Tequila matured at least 2 months in oak or encino (NOM-006).
Tequila Añejo — Tequila matured at least 1 year in oak or encino containers of up to 600 L (NOM-006).
Tequila Extra Añejo — Tequila matured at least 3 years in oak or encino containers of up to 600 L (NOM-006).
Mezcal (Joven/Reposado/Añejo) — Mexican agave spirit regulated by NOM-070, with classes by aging.
Mezcal Ancestral — Most traditional NOM-070 mezcal category: pit ovens, hand or tahona milling, clay-pot distillation.
Mezcal Artesanal — NOM-070 mezcal category with traditional cooking and milling, allowing copper stills.
Raicilla — Agave spirit from Jalisco, Mexico, with its own denomination of origin.
Sotol (Dasylirion) — Spirit from the desert spoon plant (Dasylirion) of northern Mexico.
Bacanora — Agave spirit from Sonora, Mexico, with its own denomination of origin.
Cognac VS — Cognac whose youngest eau-de-vie is at least 2 years old.
Cognac VSOP — Cognac whose youngest eau-de-vie is at least 4 years old.
Cognac XO — Cognac whose youngest eau-de-vie is at least 10 years old.
Armagnac — Grape brandy from Gascony, traditionally single-distilled in a column still (alambic armagnacais).
Brandy de Jerez — Spanish brandy aged in Sherry casks using the solera system in the Jerez area.
Pisco (Peru/Chile) — Grape brandy from Peru or Chile, each with its own rules.
Calvados — Apple (and pear) brandy from Normandy under AOC rules.
Grappa — Italian spirit distilled from grape pomace.
Eau-de-vie (Kirsch/Poire Williams) — Clear fruit brandy, e.g. Kirsch (cherry) or Poire Williams (pear).
American brandy — Brandy made in the US, mostly from grapes and largely in California.
Grain vodka — Vodka distilled from cereals such as wheat or rye.
Potato vodka — Vodka distilled from potatoes.
Grape vodka — Vodka distilled from grapes.
Flavored vodka — Vodka with added natural or artificial flavors.
Amaro — Italian bittersweet herbal liqueur.
Orange liqueur (Triple sec/Curaçao) — Orange-peel flavored liqueurs.
Herbal (Chartreuse/Bénédictine) — Liqueurs flavored with many herbs, historically made by monks.
Anise (Pastis/Ouzo/Sambuca/Absinthe) — Spirits and liqueurs flavored with anise or star anise; absinthe also contains wormwood.
Coffee liqueur — Sweet liqueur flavored with coffee, e.g. Kahlúa.
Cream liqueur — Liqueur blended with dairy cream, e.g. Irish cream.
Nut liqueur (Amaretto/Frangelico) — Liqueurs flavored with nuts or apricot kernels.
Fruit liqueur (Limoncello/Crème de cassis) — Sweetened spirit flavored with fruit, e.g. lemon zest or blackcurrant.
Baijiu: Strong aroma (nongxiang) — The most widely produced baijiu style, with fruity, pungent character; e.g. Wuliangye.
Baijiu: Light aroma (qingxiang) — Baijiu style with a clean, delicate profile, typified by Fenjiu.
Baijiu: Sauce aroma (jiangxiang) — Baijiu style with savory, soy-like character, typified by Moutai.
Baijiu: Rice aroma (mixiang) — Baijiu style made mainly from rice, with a soft profile, e.g. Guilin Sanhua.
Shochu (honkaku) — Japanese single-distilled spirit from ingredients such as barley, sweet potato or rice.
Awamori — Okinawan distilled spirit made from long-grain rice with black koji (Aspergillus luchuensis).
Soju — Korean distilled spirit, traditionally from rice; mass-market versions are diluted and sweetened.
Arrack — South and Southeast Asian spirits made from palm sap, sugarcane or rice; for example Batavia arrack and Sri Lankan coconut arrack.
#1 char (light) — Lightest standard barrel char level, burned for about 15 seconds by common cooperage convention.
#2 char — Light-to-medium barrel char level.
#3 char (common for bourbon) — Medium-heavy barrel char level, widely used for bourbon.

#4 char (alligator) — Heaviest standard char (about 55 seconds); the charred surface cracks into scales like alligator skin.

Toast + char (two-step) — Barrel heat treatment that toasts the wood first and then chars it.

See Wine Academy: oak, forests, sizes — Cross-reference: oak species, forests and barrel sizes are covered in the Wine Academy.

Ex-bourbon — Used bourbon barrels, the most common cask for maturing Scotch.

Oloroso sherry — Casks seasoned with oxidatively aged Oloroso Sherry, used for maturation or finishing.

Pedro Ximénez (PX) sherry — Casks seasoned with sweet PX Sherry, used for finishing.

Fino/Amontillado sherry — Casks seasoned with dry Sherry, used to finish spirits.

Port (ruby/tawny) — Casks that previously held Port wine, used to finish spirits.

Red wine — Casks that previously held red wine, used to finish spirits.

Rum cask — Casks that previously held rum, used to finish other spirits.

Cognac cask — Casks that previously held Cognac, used to finish other spirits.

Beer/stout cask — Casks that previously held beer, used to finish whisky.

Solera (criaderas y solera) — Fractional blending system where younger wine tops up older barrels, so each bottling is a blend of ages.

Angel's share (evaporation) — Spirit lost to evaporation through the cask during aging.

Dunnage warehouse — Traditional low, earth-floored warehouse with casks stacked a few high.

Rickhouse (rackhouse) — Multi-story warehouse with barrels on wooden racks, typical for bourbon.

Palletized warehouse — Warehouse where casks are stored upright on pallets.

Tropical maturation — Aging in hot climates, where faster evaporation and wood interaction speed up maturation.

Bottled-in-Bond (≥4 years, US) — US designation: one distiller, one season, aged at least 4 years in a bonded warehouse, bottled at 100 proof.

Tequila Reposado (≥2 months in oak) — Tequila matured at least 2 months in oak or encino (NOM-006).

Tequila Añejo (≥1 year, ≤600 L oak) — Tequila matured at least 1 year in oak or encino containers of up to 600 L (NOM-006).

Tequila Extra Añejo (≥3 years, ≤600 L oak) — Tequila matured at least 3 years in oak or encino containers of up to 600 L (NOM-006).

Cristalino (aged, then filtered) — Aged tequila that has been filtered (often through charcoal) to remove color; an industry term, not a NOM class.

Aquavit (akvavit) — Scandinavian spirit flavored mainly with caraway or dill.

Rakı — Turkish anise-flavored grape spirit.

Arak — Anise-flavored grape spirit of the Levant.

Pálinka — Hungarian fruit brandy with protected status.

Slivovitz (šljivovica) — Plum brandy of Central and Eastern Europe.

Singani — Bolivian grape brandy made from Muscat of Alexandria.

Feni — Goan spirit made from cashew apple or coconut palm sap.

Old Fashioned — Cocktail of whiskey, sugar, bitters and a twist of citrus peel.

Manhattan — Cocktail of whiskey, sweet vermouth and bitters.

Dry Martini — Cocktail of gin (or vodka) and dry vermouth.

Negroni — Cocktail of equal parts gin, sweet vermouth and Campari.

Daiquiri — Cocktail of rum, lime juice and sugar.

Whiskey Sour — Cocktail of whiskey, lemon, sugar and optionally egg white.

Sidecar — Cocktail of Cognac, orange liqueur and lemon.

Sazerac — New Orleans cocktail of rye or Cognac, sugar, Peychaud's bitters and an absinthe rinse.

Boulevardier — Cocktail of bourbon or rye, sweet vermouth and Campari.

Martinez — Cocktail of gin, sweet vermouth, maraschino and bitters, a predecessor of the Martini.

Margarita — Cocktail of tequila, orange liqueur and lime juice.

Mojito — Cuban cocktail of white rum, lime, sugar, mint and soda water.

Cosmopolitan — Cocktail of vodka, orange liqueur, cranberry juice and lime.

Moscow Mule — Cocktail of vodka, ginger beer and lime.

Mai Tai — Tiki cocktail of rum, lime, orange curaçao and orgeat.

Piña Colada — Cocktail of rum, pineapple and coconut cream.

Bloody Mary — Cocktail of vodka, tomato juice and savory seasonings.

Caipirinha — Brazilian cocktail of cachaça, lime and sugar.

Mimosa — Drink of sparkling wine and orange juice.

French 75 — Cocktail of gin, lemon, sugar and Champagne.

Espresso Martini — Cocktail of vodka, espresso and coffee liqueur.

Spritz Veneziano — Venetian drink of Prosecco, a bitter aperitif and soda water.

Penicillin — Modern cocktail of blended Scotch, lemon, honey-ginger syrup and a float of peated Scotch.
Paper Plane — Modern cocktail of bourbon, Aperol, Amaro Nonino and lemon in equal parts.
Tommy's Margarita — Margarita variation with agave syrup instead of orange liqueur.
Naked and Famous — Modern cocktail of mezcal, Yellow Chartreuse, Aperol and lime in equal parts.
Virgin cocktails (mocktails) — Mixed drinks made without alcohol.
Non-alcoholic gin alternatives — Alcohol-free botanical distillates or infusions in a gin style.
Non-alcoholic whiskey alternatives — Alcohol-free drinks imitating whiskey flavors.
Non-alcoholic aperitif/bitter alternatives — Alcohol-free drinks that imitate bitter aperitifs.
Shrub-based drinks — Drinks made with shrub, a vinegar-based fruit syrup.
Corn — Main grain of bourbon (at least 51% of the mash) and the base of corn whiskey.
Rye — Spicy grain used in rye whiskey and bourbon mash bills.
Malted barley — Barley that has been germinated and dried; the base of malt whisky.
Wheat — Grain used in wheated bourbon, wheat whiskey and many vodkas.
Sugarcane juice — Fresh cane juice, the base of rhum agricole and cachaça.
Molasses — Sugar-refining by-product and the base of most rum.
Grapes/wine — Raw material for brandies such as Cognac, Armagnac and pisco.
Apples & pears — Fruit raw materials for cider brandies such as Calvados and for pear eaux-de-vie.
Blue agave (A. tequilana Weber) — Agave tequilana Weber var. azul, the only agave permitted for tequila.
Potatoes — Raw material for some vodkas and aquavits.
Sorghum — Main grain of most baijiu.
Rice — Raw material for shochu, awamori and some baijiu.
Bourbon (≥51% corn) — US whiskey made from at least 51% corn and aged in new charred oak containers.
Rye whiskey (≥51% rye) — US whiskey made from at least 51% rye and aged in new charred oak.
High-rye bourbon — Bourbon with a relatively high share of rye in its mash bill, giving spicier flavor.
Wheated bourbon — Bourbon that uses wheat instead of rye as its secondary grain.
Single malt (100% malted barley) — Whisky made from 100% malted barley at one distillery.
Four-grain — Mash bill using corn, rye, wheat and malted barley.
Sweet mash — Mash started fresh, without backset from a previous distillation.
Sour mash (backset) — Adding spent mash from a previous distillation to a new mash for acidity and consistency.
Wash (distiller's beer) — Fermented liquid that goes into the still.
Open vs closed fermenters — Fermenting in open vats, exposed to air and wild microbes, versus closed tanks.
Dunder (Jamaican rum) — Leftover liquid from previous distillations, used in Jamaican rum production to build heavy flavor.
Solid-state fermentation (baijiu) — Fermenting moist grain with qu starter in pits or piles rather than in liquid; characteristic of baijiu.
Pot still — Batch still, usually copper, used for malt whisky, Cognac and many rums.
Column (Coffey) still — Continuous still that can produce high-strength, lighter spirit efficiently.
Hybrid still — Pot still with an attached rectifying column, able to make different spirit styles.
Alembic charentais — Traditional copper pot still used for Cognac's double distillation.
Double distillation — Distilling twice in pot stills, as for most Scotch malt whisky and Cognac.
Triple distillation — Distilling three times, traditional in much Irish whiskey and in some Lowland Scotch.
Doubler/thumper — Secondary pot vessel in American distilling that redistills the spirit vapor from the first still.
Heads (foreshots) — First, most volatile part of a distillation run, usually discarded or recycled.
Hearts — Middle part of a distillation run kept as the spirit.
Tails (feints) — Final part of a distillation run, heavier and oilier, usually recycled.
Reflux — Vapor that condenses and falls back in a still; more reflux gives a lighter, purer spirit.
Proof & ABV — US proof is twice the ABV (100 proof = 50% ABV).
Jimador harvest (coa) — Agave harvest by jimadores, who cut leaves off the agave heart with a sharp tool called a coa.
Piñas — Harvested agave hearts, cooked to convert their inulin into fermentable sugars.
Earthen pit oven (mezcal) — Underground pit lined with stones and fired with wood, used to roast agave; it gives mezcal its smoky character.
Masonry horno — Above-ground masonry oven used to steam-cook agave for tequila.
Autoclave — Pressurized steam oven used by some tequila producers to cook agave quickly.
Diffuser (difusor) — Machine that extracts sugars from raw agave with water and pressure, sometimes with acid.
Tahona (stone wheel) — Large stone wheel used to crush cooked agave.
Roller mill — Mill that crushes malt or grain between rollers.
Copper & clay pot stills — Small stills used for traditional mezcal; clay pots are required for the Ancestral category.
Proofing (dilution) — Adding water to bring spirit down to bottling strength.

Chill filtration — Chilling and filtering whisky to remove compounds that can cause cloudiness when cold.

Non-chill filtered — Whisky bottled without chill filtration, keeping more texture.

Cask strength — Spirit bottled at or near the strength it came out of the cask, without dilution.

Caramel color (E150a) — Plain caramel coloring, permitted in Scotch whisky and many spirits to adjust color.

See Barrel Toasting & Aging — Cross-reference: see this academy's Barrel Toasting & Aging section.

Blanco/Plata · no aging (may rest <2 mo) — Tequila class bottled without abocado (mellowing additives); it may rest under 2 months in oak or encino (NOM-006 §4.36.1). Requirement: no aging (may rest <2 mo).

Joven/Oro · blend or abocado — Tequila class made by blending blanco with reposado, añejo or extra añejo tequila, or by mellowing blanco with permitted additives (abocado) (NOM-006 §4.36.2). Requirement: blend or abocado.

Reposado · 2+ mo oak — Reposado: official/legal aging category. Requirement: 2+ mo oak. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Añejo · 1+ yr oak ≤600 L — Añejo: official/legal aging category. Requirement: 1+ yr oak ≤600 L. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Extra Añejo · 3+ yr oak ≤600 L — Tequila class matured at least 3 years in oak or encino containers of up to 600 L (NOM-006). Requirement: 3+ yr oak ≤600 L.

Scotch · 3 yr oak ≤700 L — Scotch: official/legal aging category. Requirement: 3 yr oak ≤700 L. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Japanese (JSLMA) · 3 yr wood ≤700 L — Japanese (JSLMA): official/legal aging category. Requirement: 3 yr wood ≤700 L. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Irish · 3 yr wood — Irish: official/legal aging category. Requirement: 3 yr wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Canadian · 3 yr small wood — Canadian: official/legal aging category. Requirement: 3 yr small wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

US Straight · 2 yr new charred oak — US Straight: official/legal aging category. Requirement: 2 yr new charred oak. Times are minimums unless stated; see facts for barrel/bottle detail and source.

US age statement · required under 4 yr — US age statement: official/legal aging category. Requirement: required under 4 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Bottled-in-Bond · 4 yr, 100 proof — US designation: one distiller, one season, aged at least 4 years in a bonded warehouse, bottled at 100 proof. Requirement: 4 yr, 100 proof.

Bourbon · no minimum (unless straight) — US whiskey made from at least 51% corn and aged in new charred oak containers. Requirement: no minimum (unless straight).

Cognac VS · 2 yr — Cognac whose youngest eau-de-vie is at least 2 years old. Requirement: 2 yr.

Cognac VSOP · 4 yr — Cognac whose youngest eau-de-vie is at least 4 years old. Requirement: 4 yr.

Cognac Napoléon · 6 yr — Cognac Napoléon: official/legal aging category. Requirement: 6 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Cognac XO · 10 yr — Cognac whose youngest eau-de-vie is at least 10 years old. Requirement: 10 yr.

Cognac XXO · 14 yr — Cognac XXO: official/legal aging category. Requirement: 14 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Armagnac VS · 1 yr — Armagnac VS: official/legal aging category. Requirement: 1 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Armagnac VSOP · 4 yr — Armagnac VSOP: official/legal aging category. Requirement: 4 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Armagnac XO · 10 yr — Armagnac XO: official/legal aging category. Requirement: 10 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Calvados Fine · 2 yr — Calvados Fine: official/legal aging category. Requirement: 2 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Calvados Vieux/Réserve · 3 yr — Calvados Vieux/Réserve: official/legal aging category. Requirement: 3 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Calvados VSOP · 4 yr — Calvados VSOP: official/legal aging category. Requirement: 4 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Calvados XO · 6 yr — Calvados XO: official/legal aging category. Requirement: 6 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Brandy de Jerez Solera · 6+ mo avg — Brandy de Jerez Solera: official/legal aging category. Requirement: 6+ mo avg. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Brandy de Jerez Solera Reserva · 1+ yr avg — Brandy de Jerez Solera Reserva: official/legal aging category. Requirement: 1+ yr avg. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Brandy de Jerez Solera Gran Reserva · 3+ yr avg — Brandy de Jerez Solera Gran Reserva: official/legal aging category. Requirement: 3+ yr avg. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Pisco (Peru) · 3 mo rest, no wood — Grape brandy from Peru or Chile, each with its own rules. Requirement: 3 mo rest, no wood.

Grappa Invecchiata/Vecchia · 12 mo wood — Grappa Invecchiata/Vecchia: official/legal aging category. Requirement: 12 mo wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Grappa Riserva/Stravecchia · 18 mo wood — Grappa Riserva/Stravecchia: official/legal aging category. Requirement: 18 mo wood. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Élevé sous bois · 12 mo oak — Élevé sous bois: official/legal aging category. Requirement: 12 mo oak. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Vieux · 3 yr oak <650 L — Vieux: official/legal aging category. Requirement: 3 yr oak <650 L. Times are minimums unless stated; see facts for barrel/bottle detail and source.

VO · 3 yr — VO: official/legal aging category. Requirement: 3 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

VSOP · 4 yr — VSOP: official/legal aging category. Requirement: 4 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

XO · 6 yr — XO: official/legal aging category. Requirement: 6 yr. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Jamaica Rum GI · no age minimum — Jamaica Rum GI: official/legal aging category. Requirement: no age minimum. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Barbados · no GI age minimum — Barbados: official/legal aging category. Requirement: no GI age minimum. Times are minimums unless stated; see facts for barrel/bottle detail and source.

Arabica (Coffea arabica) — Coffea arabica, the main commercial coffee species, valued for aromatic cup quality.

Robusta (Coffea canephora) — Coffea canephora, a hardier, higher-caffeine coffee species.

Liberica — Coffea liberica, a large-bean coffee species from West Africa.

Excelsa — Coffee now classified as a variety of Coffea liberica (var. dewevrei), with tart, fruity flavor.

Washed (wet) — Processing method where fruit is removed and beans are fermented and washed before drying, giving a clean cup.

Natural (dry) — Processing method where whole coffee cherries are dried with the fruit on.

Honey (pulped natural) — Processing method where skin is removed but some sticky mucilage is left on during drying.

Wet-hulled (Giling Basah) — Indonesian process that removes parchment while the beans are still moist.

Anaerobic fermentation — Processing in which coffee cherries or beans ferment in sealed, low-oxygen tanks, often giving intense, unusual flavors.

Light (cinnamon/New England) — Light roast levels ending near first crack.

Medium (City/American) — Medium roast levels, typically ending shortly after first crack.

Medium-dark (Full City) — Roast level approaching second crack.

Dark (Vienna/French/Italian) — Roast levels beyond second crack, with oily surfaces and roast-dominant flavor.

Espresso — Concentrated coffee made by forcing hot water through finely ground coffee at about 9 bar.

Ristretto — A shorter, more concentrated espresso.

Lungo — A longer espresso pulled with more water.

Americano — Espresso diluted with hot water.

Macchiato — Espresso 'marked' with a small amount of milk foam.

Cortado — Espresso cut with a roughly equal amount of warm milk.

Flat white — Espresso drink with a thin layer of microfoamed milk, smaller than a latte.

Cappuccino — Espresso with steamed milk and a thick layer of milk foam.

Latte — Espresso with a larger amount of steamed milk and a thin foam layer.

Mocha — Espresso with chocolate and steamed milk. The name also refers to the historic Yemeni port of Mocha.

Affogato — Espresso poured over a scoop of ice cream or gelato.

Pour-over (V60/Chemex/Kalita) — Manual filter brewing by pouring water over coffee in a dripper.

French press — Immersion brewer with a metal mesh plunger.

AeroPress — Hand-pressed immersion brewer, invented in 2005, that pushes coffee through a paper or metal filter.

Moka pot — Stovetop brewer using steam pressure to push water up through coffee.

Siphon — Vacuum brewer using vapor pressure and suction.

Drip (batch brew) — Automatic machine brewing that drips hot water over ground coffee in a filter.

Turkish (cezve) — Finely ground coffee simmered in a small pot (cezve) and served unfiltered.

Cold brew — Coffee extracted with cold or room-temperature water over many hours.

Cold drip (Kyoto) — Cold water dripped slowly through coffee over several hours.

Phin (Vietnamese) — Small metal drip filter used for Vietnamese coffee.

Green beans rested in bourbon barrels — Green coffee stored in used bourbon barrels before roasting so it absorbs barrel aromas.

Rum barrel-aged beans — Green coffee aged in used rum barrels before roasting.

Wine barrel-aged beans — Green coffee aged in used wine barrels before roasting.

Whiskey barrel-aged cold brew — Cold brew made from coffee aged in used whiskey barrels.

Swiss Water Process — Chemical-free decaffeination using water and activated carbon to remove caffeine.

CO2 (supercritical) process — Decaffeination using pressurized, supercritical carbon dioxide to dissolve caffeine.

Ethyl acetate (sugarcane) process — Decaffeination with ethyl acetate solvent, often made from sugarcane and marketed as 'natural decaf'.
Methylene chloride (direct/indirect) process — Decaffeination with dichloromethane solvent, either directly on beans or on water used to soak them.
Whole bean — Coffee sold unground.
Ground — Coffee sold pre-ground.
Instant (freeze-dried) — Soluble coffee made by freezing coffee extract and removing the water under vacuum.
Instant (spray-dried) — Soluble coffee made by spraying coffee extract into hot air.
Single-serve pods/capsules — Pre-portioned coffee in capsules or pods for brewing machines.
Coffee concentrate — Strong coffee extract meant to be diluted before drinking.
Drip bags — Single-serve filter pouches of ground coffee that hang over a cup.
Iced coffee — Coffee served cold over ice.
Iced latte — Espresso with cold milk over ice.
Nitro cold brew — Cold brew infused with nitrogen for a creamy texture.
Frappé (Greek) — Shaken iced instant coffee, popular in Greece.
Blended iced coffee (frappuccino-style) — Coffee blended with ice, milk and sweetener into a slush.
Espresso tonic — Espresso poured over tonic water and ice.
Dalgona coffee — Whipped instant coffee, sugar and water spooned over milk.
Shakerato — Espresso shaken with ice and sugar.
Typica — One of the original Arabica varieties spread from Yemen and Java.
Caturra — Compact natural mutation of Bourbon, discovered in Brazil.
Catuaí — Compact Brazilian variety from a Mundo Novo × Caturra cross.
Mundo Novo — Brazilian natural cross between Bourbon and Sumatra (Typica).
Geisha (Gesha) — Arabica variety from Ethiopia, made famous by Panama, known for floral, tea-like flavor.
SL28 — Kenyan variety selected by Scott Laboratories in the 1930s, prized for cup quality.
SL34 — Kenyan variety selected by Scott Laboratories, prized for cup quality.
Pacamara — Large-bean Salvadoran cross of Pacas and Maragogype.
Maragogype — Large-bean Typica mutation discovered in Brazil.
Villa Sarchi — Compact Bourbon mutation from Costa Rica.
Pink Bourbon — Pink-fruited Arabica from Huila, Colombia; its exact lineage is debated.
Timor Hybrid — Natural Arabica × robusta hybrid found in Timor, the source of rust resistance in many varieties.
Catimor — Rust-resistant Arabica group from a Timor Hybrid × Caturra cross.
Sarchimor — Rust-resistant group from a Villa Sarchi × Timor Hybrid cross.
Castillo — Colombian rust-resistant variety released by Cenicafé in 2005, with Timor Hybrid ancestry.
Colombia — Major producer of washed Arabica, with harvests in most months across its regions.
Ruiru 11 — Compact Kenyan hybrid variety resistant to coffee berry disease and leaf rust, released in 1985.
Batian — Kenyan disease-resistant Arabica variety released in 2010, with resistance to coffee leaf rust and coffee berry disease.
Marsellesa — Rust-resistant Sarchimor-type variety.
Obatã — Brazilian rust-resistant Sarchimor variety.
Starmaya (F1 hybrid) — F1 hybrid Arabica that can be propagated from seed.
Ethiopian heirloom landraces — Thousands of genetically diverse local Arabica types grown in Ethiopia.
JARC 74110 — Ethiopian Arabica selection released by the Jimma Agricultural Research Center.
JARC 74112 — Ethiopian Arabica selection released by the Jimma Agricultural Research Center.
Kurume — Ethiopian local landrace name.
Wolisho — Ethiopian local landrace name.
Robusta (C. canephora) clones — Coffea canephora, a hardier, higher-caffeine coffee species.
Conilon (Brazil) — Brazilian name for Coffea canephora grown mainly in Espírito Santo and Rondônia.
Excelsa (C. liberica var. dewevrei) — Coffee now classified as a variety of Coffea liberica (var. dewevrei), with tart, fruity flavor.
Altitude (masl) — Farm elevation in meters above sea level. Higher altitudes generally slow cherry ripening and are associated with denser beans.
Shade-grown — Coffee grown under tree cover.
Full sun — Coffee grown without shade trees, usually giving higher yield at greater ecological cost.
Agroforestry — Growing coffee among trees and other crops, which can support biodiversity and soil health.
Volcanic soils — Fertile, well-draining soils of volcanic origin found in many coffee regions.
Distinct dry season — A clear dry period that synchronizes coffee flowering and harvest.
Coffee belt (tropics) — The band between roughly the Tropics of Cancer and Capricorn where coffee is grown.

Ethiopia (Yirgacheffe, Sidama, Guji) — Birthplace of Arabica, with diverse landraces; Yirgacheffe, Sidama and Guji are famous growing areas.
Kenya (Nyeri, Kirinyaga) — Kenyan coffee regions known for bright, washed SL28 and SL34 coffees.
Rwanda — East African producer of washed Bourbon-type coffees.
Burundi — East African producer of washed Bourbon-type Arabicas.
Uganda — Major African robusta producer, also growing Arabica.
Tanzania — East African producer, including Kilimanjaro coffees.
Yemen — Historic coffee origin with traditional natural-process coffee.
Brazil — The world's largest coffee producer, known especially for natural and pulped-natural Arabicas, plus Conilon robusta.
Guatemala — Central American producer with distinct regions such as Antigua and Huehuetenango.
Costa Rica — Central American producer known for washed and honey coffees; growing only Arabica was long mandated by law.
Honduras — One of Central America's largest coffee producers.
El Salvador — Central American producer known for Bourbon and the Pacas and Pacamara varieties.
Panama — Producer famous for Geisha coffees from Boquete.
Peru — Major producer of Arabica, including much certified organic coffee.
Mexico — Major producer, notable for organic coffee from Chiapas and Oaxaca.
Nicaragua — Central American producer, notably in Jinotega and Matagalpa.
Bolivia — Small Andean coffee producer whose high-altitude farms are mainly in the Yungas.
Sumatra — Indonesian island known for earthy, full-bodied, wet-hulled coffees.
Java — Indonesian island whose name became a byword for coffee; it grows both Arabica and robusta.
Sulawesi — Indonesian island producing Toraja coffees.
Papua New Guinea — Producer of mostly smallholder Arabica.
India (Monsooned Malabar) — Indian coffee exposed to monsoon winds, giving low acidity and an earthy flavor.
Vietnam — World's second-largest coffee producer, mostly robusta.
Yunnan — Chinese province that grows Arabica, mostly Catimor.
Hawaii (Kona) — Coffee grown on the Kona slopes of Hawaii's Big Island.
Selective hand-picking — Hand-harvesting only ripe cherries.
Strip picking — Harvesting all cherries from a branch at once.
Mechanical harvesting — Machine-harvesting coffee from cherries on flat land, common in Brazil.
Ripeness sorting — Separating cherries by ripeness.
Float sorting — Putting cherries in water and removing floaters, which are often defective or underripe.
Pulping — Removing the cherry skin and fruit from coffee seeds.
Fermentation (dry or underwater) — Washed-process stage where microbes break down mucilage, either in dry tanks or under water.
Washing — Rinsing fermented coffee to remove remaining mucilage.
Mechanical demucilaging — Removing mucilage mechanically instead of by fermentation.
Drying — Reducing coffee moisture to a safe level for storage.
White honey — Honey process leaving little mucilage.
Yellow honey — Honey process leaving light-to-moderate mucilage.
Red honey — Honey process leaving moderate mucilage.
Black honey — Honey process leaving the most mucilage and drying slowly, giving the most fruit-forward honey style.
Anaerobic natural — Whole cherries fermented in sealed tanks, then dried as a natural.
Anaerobic washed — Coffee fermented in sealed tanks, then washed and dried.
Lactic process — Fermentation method that encourages lactic acid bacteria to give creamy, yogurt-like notes.
Yeast-inoculated — Fermentation started with selected yeast strains.
Thermal shock — Rapid heat change during roasting or brewing.
Co-fermented (infused) — Coffee fermented with added fruit, spices or other ingredients. These flavors are not intrinsic to the coffee, so labeling transparency is debated.
Double fermentation — Fermenting coffee twice, e.g. Kenya's dry and then wet fermentation.
Patio drying — Drying coffee spread on concrete or brick patios.
Raised (African) beds — Elevated mesh drying tables that improve airflow.
Mechanical dryers (guardiolas) — Rotating drum dryers used to dry coffee.
Target moisture 10–12% — Ideal moisture of dried green coffee for storage.
Resting (reposo) — Letting dried coffee stabilize in parchment before milling.
Hulling (parchment removal) — Removing the parchment layer (or dried husk) from green beans.
Polishing — Removing the silverskin from green beans for appearance.

Density sorting — Separating beans by density, since denser beans are often higher quality.
Optical color sorting — Machines that reject beans by color.
Screen size grading — Grading beans by size using sieves numbered in 64ths of an inch.
SCA specialty grade — Green coffee with zero primary defects, few secondary defects and a cupping score of 80+.
Primary defects (black, sour, fungus) — Serious green-coffee defects counted more heavily in grading.
Secondary defects (broken, insect, quakers) — Less severe green-coffee defects, such as broken beans, insect damage and unripe 'quakers'.
Drying phase — Early roasting stage in which moisture evaporates.
Maillard reactions — Browning reactions between sugars and amino acids that create roasted flavors and color.
Caramelization — Browning of sugars by heat during roasting.
Strecker degradation — Roasting reaction of amino acids that produces aroma compounds.
Chlorogenic acid breakdown — Roasting breaks down chlorogenic acids, reducing their bitter, astringent contribution.
CO2 degassing — Roasted coffee releasing carbon dioxide over the days after roasting.
Charge temperature — Roaster temperature when the green beans are dropped in.
Turning point — Lowest probe temperature after beans are charged into the roaster.
Rate of rise (RoR) — Speed at which bean temperature increases during roasting.
First crack — Audible popping during roasting as moisture and gases escape; marks the start of a light roast.
Development time ratio — Share of total roast time after first crack.
Second crack — Later cracking during roasting, associated with darker roasts.
Agtron color — Roast-color measurement made with Agtron infrared devices; higher numbers mean lighter roasts.
Extraction yield (18–22%) — Share of the dry coffee's mass dissolved into the brew; the SCA ideal range is about 18–22%.
Total dissolved solids (TDS) — Total amount of dissolved minerals and salts in water, usually in mg/L.
SCA brewing control chart — Chart relating extraction yield and brew strength (TDS) to define balanced coffee.
Brew ratio (~1:15–1:18) — Ratio of coffee to water; filter coffee commonly uses about 1 g of coffee per 15–18 g of water.
Refractometer — Instrument that measures dissolved solids (TDS) in brewed coffee.
Grind size — Particle size of ground coffee, matched to the brewing method.
Water temperature (90–96 °C) — Typical brewing water temperature range.
Contact time — How long water and coffee are in contact during brewing.
Agitation — Stirring or turbulence during brewing; more agitation speeds up extraction.
Bypass — Water added to brewed coffee after extraction to dilute it, used in some batch brewers.
Espresso ratio (~1:2) — A common espresso recipe uses about twice as much liquid out as dry coffee in.
Pressure (~9 bar) — Typical espresso brewing pressure.
SCA water standard (TDS ~150 mg/L) — SCA target water chemistry for brewing, with TDS around 150 mg/L.
Calcium hardness — Calcium in brewing water, which affects extraction and scale formation.
Alkalinity (~40 mg/L) — Water's buffering capacity (bicarbonate). SCA guidance targets about 40 mg/L as CaCO3 so acidity is not dulled.
pH ~7 — Neutral pH target for brewing water.
Chlorine-free — Brewing water free of chlorine, which would otherwise cause off-flavors.
SCA cupping form — Specialty Coffee Association scoring sheet for evaluating coffee quality.
Fragrance/aroma — Cupping attribute: smell of the dry grounds (fragrance) and wet coffee (aroma).
Flavor — Cupping attribute: combined taste and retronasal aroma.
Aftertaste — Cupping attribute: the length and quality of the flavors left after swallowing.
Acidity — Cupping attribute for perceived brightness or tartness (e.g. citric, malic), valued in many specialty coffees.
Body — Cupping attribute for the weight and texture of coffee in the mouth.
Balance — Cupping attribute: how well flavor, acidity, body and aftertaste fit together.
Uniformity — Cupping attribute for consistency across cups of the same sample.
Clean cup — Cupping attribute: no taints or defects from first sip to aftertaste.
Sweetness — Cupping attribute for pleasant sweetness.
Overall — Cupping score reflecting the cupper's holistic impression.
Specialty = 80+ points — Under SCA grading, coffee scoring 80 points or above qualifies as specialty grade.
Fruity — Flavor category including berry, citrus and stone-fruit notes.
Floral — Flavor category with notes such as jasmine, rose and other flowers.
Sweet — Flavor category for sugar-like notes.
Nutty/cocoa — Flavor category with nut and chocolate notes.
Spices — Flavor category for spice notes.
Roasted — Coffee after roasting, ready to grind and brew.
Green/vegetative — Flavor category with fresh, herbal or underdeveloped notes.

Sour/fermented — Flavor category for sour or fermented notes.
Other (papery, chemical) — Flavor-wheel category for off-flavors such as papery, chemical or musty.
Silver Needle (Bai Hao Yin Zhen) — Chinese white tea made only from unopened buds.
White Peony (Bai Mu Dan) — White tea made from buds and young leaves.
Shou Mei — Chinese white tea from later, larger leaves.
Darjeeling white — White tea made in Darjeeling, India.
Junshan Yinzhen — Yellow tea from Junshan Island in Hunan.
Meng Ding Huang Ya — Yellow tea from Mount Meng, Sichuan.
Huoshan Huang Ya — Yellow tea from Huoshan, Anhui.
Longjing (Dragon Well) — Flat, pan-fired green tea from Hangzhou, Zhejiang.
Bi Luo Chun — Famous Chinese green tea from the Dongting mountains near Suzhou, Jiangsu, rolled into tight spirals.
Gunpowder — Chinese green tea rolled into small pellets.
Sencha — Steamed Japanese green tea, the most common tea in Japan.
Gyokuro — Japanese green tea shaded for about three weeks before harvest, giving sweet, savory flavor.
Matcha — Finely stone-ground powder of shade-grown Japanese tencha leaf, whisked into water.
Hojicha — Roasted Japanese green tea.
Genmaicha — Japanese green tea blended with roasted rice.
Bancha — Everyday Japanese green tea from later harvests and larger leaves.
Tieguanyin — Famous Chinese oolong from Anxi, Fujian.
Da Hong Pao (Wuyi rock) — Famous Wuyi rock oolong from Fujian.
Dong Ding — Roasted rolled oolong from Lugu, Nantou, Taiwan.
Alishan high-mountain — Taiwanese high-mountain oolong from the Alishan area of Chiayi.
Oriental Beauty — Taiwanese oolong made from leaves bitten by leafhoppers, giving honey-like notes.
Dan Cong — Guangdong oolongs from Phoenix Mountain, known for aromas resembling flowers and fruit.
Assam — Tea from Assam, India, typically strong and malty, from var. assamica plants.
Darjeeling — Tea from the Darjeeling district of West Bengal, India.
Ceylon — Tea from Sri Lanka, named after the island's former name.
Keemun — Chinese black tea from Qimen, Anhui.
Dian Hong (Yunnan) — Yunnan black tea, often rich in golden buds.
Lapsang Souchong — Chinese black tea from Wuyi, often smoked over pinewood.
English Breakfast blend — Robust black tea blend, often of Assam, Ceylon and Kenyan teas.
Earl Grey — Black tea flavored with bergamot oil.
Sheng (raw) pu-erh — Pu-erh tea pressed and aged slowly without accelerated fermentation.
Shou (ripe) pu-erh — Pu-erh tea whose aging is accelerated by wet piling (wo dui).
Liu Bao — Dark tea from Guangxi, China.
Fu Zhuan (Anhua brick) — Dark brick tea from Anhua, Hunan, known for its 'golden flower' fungus.
Rooibos — Caffeine-free South African herbal infusion from Aspalathus linearis.
Honeybush — Caffeine-free South African infusion from Cyclopia species.
Chamomile — Caffeine-free herbal infusion of chamomile flowers.
Peppermint — Caffeine-free mint infusion.
Hibiscus — Tart, red, caffeine-free infusion of hibiscus calyces.
Ginger — Rhizome used for spicy herbal infusions and in chai.
Lemongrass — Citrusy herbal infusion.
Jasmine tea — Tea, usually green, scented with jasmine blossoms.
Earl Grey (bergamot) — Black tea flavored with bergamot oil.
Lychee black — Black tea flavored or scented with lychee.
Rose black — Black tea scented with rose.
Osmanthus oolong — Oolong scented with osmanthus flowers.
Chai spice blend — Spices such as cardamom, ginger, cinnamon, clove and black pepper used in chai.
Iced tea — Brewed tea served chilled over ice.
Sweet tea (US South) — Iced black tea heavily sweetened.
Milk tea — Tea brewed and served with milk.
Chai latte — Spiced tea concentrate mixed with steamed milk.
Matcha latte — Matcha whisked with milk.
London fog — Earl Grey latte with vanilla and steamed milk.
Arnold Palmer (tea + lemonade) — Drink of iced tea mixed with lemonade, named after the golfer.
Loose leaf — Tea sold as unbagged leaves.

Tea bags — Portioned tea in paper or mesh bags.
Pyramid sachets — Tetrahedral tea bags that give leaves more room to expand.
Compressed cakes/bricks — Tea pressed into cakes or bricks, traditional for pu-erh and other dark teas.
Powdered (matcha/instant) — Tea as a fine powder, either ground leaf or soluble.
RTD bottled tea — Ready-to-drink packaged tea.
Camellia sinensis var. sinensis — Small-leaf, cold-tolerant tea plant variety of China and Japan.
Camellia sinensis var. assamica — Large-leaf tea plant variety native to Assam and Yunnan, used for strong black teas and pu-erh.
Cambod (hybrid type) — Cambod-type tea plant, a third main tea plant type with intermediate traits, alongside China and Assam types.
Yabukita — Dominant Japanese tea cultivar.
Okumidori — Japanese late-budding tea cultivar.
Saemidori — Japanese tea cultivar with sweet, vivid-green tea.
Asatsuyu — Japanese tea cultivar known for natural sweetness.
Fuding Da Bai — Tea cultivar from Fuding, Fujian, widely used for white tea.
Jin Xuan (TTES #12) — Taiwanese oolong cultivar known for creamy, 'milky' notes.
Qing Xin — Taiwanese oolong cultivar (Qing Xin Oolong).
Rou Gui — Wuyi rock oolong cultivar with a cinnamon-like aroma.
Shui Xian — Wuyi oolong cultivar.
Longjing #43 — Longjing tea cultivar bred for early budding.
AV2 (Darjeeling clone) — Clonal tea cultivar developed at Ambari Tea Estate and widely planted in Darjeeling.
China (Fujian, Yunnan, Zhejiang, Anhui) — Main Chinese tea provinces, home to many famous teas.
India (Darjeeling, Assam, Nilgiri) — Main Indian tea regions.
Sri Lanka (Nuwara Eliya, Uva, Dimbula) — Main Sri Lankan (Ceylon) tea districts.
Japan (Shizuoka, Uji, Kagoshima) — Main Japanese tea regions; Shizuoka is the largest producer.
Taiwan (Alishan, Nantou) — Main Taiwanese oolong regions.
Kenya — Major black tea producer, mostly CTC.
Nepal (Ilam) — Nepalese tea region bordering Darjeeling.
Elevation — Garden altitude; higher elevations often give slower growth and more aromatic tea.
Shading (kabuse, tencha) — Covering tea plants before harvest; kabuse is shaded sencha, and tencha is shaded leaf for matcha.
Seasonal flushes (first, second, autumn) — Harvest periods of new growth; Darjeeling first and second flushes are famous.
Plucking table pruning — Pruning tea bushes flat for an even plucking surface.
Organic/biodynamic — Tea grown under organic or biodynamic certification.
Old-tree (gushu) gardens — Gardens of old tea trees, prized in Yunnan for pu-erh.
Bud only — Plucking only the unopened bud, as for Silver Needle.
One bud, one leaf — Fine plucking standard: the bud plus the first leaf.
One bud, two leaves — Classic plucking standard: the bud plus two leaves.
One bud, three leaves — Coarser plucking standard: the bud plus three leaves.
Mature leaves (oolong, dark tea) — Larger, more mature leaves used for oolong and dark teas.
Withering — Letting fresh tea leaves lose moisture and soften before rolling.
Bruising/shaking (oolong) — Tossing oolong leaves to bruise their edges and start partial oxidation.
Rolling — Shaping tea leaves and breaking their cells to release juices.
Oxidation — Enzymatic browning of tea leaves after bruising; full oxidation makes black tea.
Kill-green (sha qing) — Heating fresh tea leaves to stop oxidation, used for green and some other teas.
Drying/firing — Final heating that removes moisture and fixes tea's flavor.
Sorting — Separating tea by leaf size and quality.
Roasting — Heating tea to develop toasty flavors.
Pan-firing (wok) — Kill-green by heating leaves in a pan or wok, typical of Chinese green tea.
Steaming (Japan) — Japanese kill-green method using steam.
Baking — Heating tea leaves (for example oolong) to dry them and develop toasty flavor.
Sun-drying (pu-erh maocha) — Sun-drying pu-erh leaves to make maocha (raw material tea).
White: wither + dry — White tea is minimally processed: withered and dried.
Yellow: kill-green + yellowing (men huang) — Yellow tea gets a 'sealed yellowing' step (men huang) after kill-green.
Green: kill-green + roll + dry — Green tea is heated to stop oxidation, then rolled and dried.
Oolong: partial oxidation — Partially oxidized tea, between green and black.
Black: full oxidation — Black tea is fully oxidized after withering and rolling.

Dark: heaping (wo dui) / aging — Dark tea is made by piling damp leaves to ferment microbially (wo dui), or by long aging.
Compression (cakes, bricks) — Steaming and pressing tea into cakes or bricks.
Aging — Storing tea, especially pu-erh, other dark teas, white tea and some oolongs, for months to years so its flavor develops.
Re-roasting — Roasting tea again to refresh it or change its character.
Scenting (jasmine) — Layering tea with fresh flowers so it absorbs their aroma.
Aracha (crude tea) — Japanese green tea after primary processing, before it is sorted and refined.
Asamushi (light steam) — Japanese sencha steamed briefly (lightly), keeping leaves more intact.
Fukamushi (deep steam) — Japanese sencha steamed longer, giving a deeper green, fuller brew.
Tencha (for matcha) — Shaded, steamed and dried tea leaf with stems and veins removed, ground into matcha.
Stone-milling — Grinding tencha in granite mills to make matcha.
Gyokuro shading (~3 weeks) — Shading tea plants for about three weeks before harvest to raise amino acids and sweetness.
Hojicha roasting — Roasting green tea, including stems, at high heat to make hojicha.
Kukicha (stems) — Japanese tea made from stems and twigs.
Shiage (refining) — Japanese finishing step that sorts and fires aracha.
Orthodox rolling — Traditional rolling that keeps leaves whole or broken, rather than CTC.
CTC (crush, tear, curl) — 'Crush, tear, curl' machine processing that produces small granules for strong, fast-brewing tea.
Rotorvane — Machine that cuts withered leaf, used before or instead of CTC.
Fannings — Small broken tea particles, larger than dust, used in tea bags.
Dust — Smallest tea particle grade, used in tea bags.
OP (Orange Pekoe) — Leaf grade term for whole-leaf black tea; it does not refer to orange flavor.
FOP — Flowery Orange Pekoe: whole-leaf grade with some tips.
GFOP — Golden Flowery Orange Pekoe: whole-leaf grade with golden tips.
TGFOP — Tippy Golden Flowery Orange Pekoe: whole-leaf grade with many golden tips.
FTGFOP — Finest Tippy Golden Flowery Orange Pekoe: high whole-leaf grade with many tips, used in Darjeeling and Assam.
SFTGFOP — Special Finest Tippy Golden Flowery Orange Pekoe, a top whole-leaf grade.
BOP (Broken OP) — Leaf grade: broken orange pekoe, smaller leaf pieces than whole-leaf OP.
CTC grades (BP, PD) — Grade names for granular CTC tea, such as Broken Pekoe and Pekoe Dust.
Western teapot — Larger pot with fewer, longer infusions.
Gongfu cha (gaiwan, Yixing) — Chinese brewing style using a high leaf-to-water ratio and many short infusions, in a gaiwan or Yixing clay pot.
Grandpa style — Leaves steeped loose in a glass and topped up with water as you drink.
Kyusu (Japanese) — Japanese teapot, often with a side handle.
Matcha whisking (chasen) — Whisking matcha with a bamboo whisk to make a frothy tea.
White/green ~70–85 °C — Typical water temperature for white and green teas.
Oolong ~85–95 °C — Typical water temperature for oolong.
Black/dark ~95–100 °C — Typical near-boiling water temperature for black and dark teas.
Western ~2–3 g per 250 mL — Typical leaf ratio for Western-style brewing.
Gongfu ~5–7 g per 100 mL — Typical gongfu leaf ratio.
Multiple infusions — Re-steeping the same leaves several times.
Soft water — Low-mineral water, preferred for brewing delicate teas.
SCOBY (bacterial cellulose pellicle) — 'Symbiotic culture of bacteria and yeast', the cellulose mat that ferments kombucha.
Starter liquid (backslopping) — Using mature kombucha from a previous batch to acidify and inoculate a new one.
Primary fermentation (F1) — First open fermentation of sweet tea with the SCOBY and starter liquid.
Secondary fermentation (F2, bottle conditioning) — Sealed fermentation that builds carbonation.
Black tea kombucha — Kombucha brewed on black tea, the traditional base.
Green tea kombucha — Kombucha brewed on green tea.
Oolong kombucha — Kombucha brewed on oolong tea.
White tea kombucha — Kombucha brewed on white tea.
Herbal/rooibos-base kombucha — Kombucha brewed on rooibos or herbal infusions instead of Camellia sinensis tea.
Original/plain — Unflavored kombucha.
Fruit-flavored — Kombucha flavored with fruit.
Botanical/herbal — Kombucha flavored with herbs or botanicals.
Hard kombucha (>0.5% ABV) — Kombucha intentionally fermented to higher alcohol.
Jun (green tea and honey) — Kombucha-like ferment made with green tea and honey.

Kombucha vinegar — Kombucha fermented long enough to become very acidic, like vinegar.

Komagataeibacter xylinus — Bacterium (formerly Acetobacter/Gluconacetobacter xylinus) that produces the cellulose pellicle.

Acetobacter — Genus of acetic acid bacteria that turn ethanol into acetic acid in kombucha and vinegar.

Gluconobacter — Acetic acid bacteria genus often found in kombucha cultures.

Brettanomyces (Dekkera) — Wild yeast genus giving 'funky', earthy or fruity flavors; prized in some beers, a fault in most wines.

Zygosaccharomyces — Acid-tolerant yeast genus common in kombucha.

Saccharomyces — Yeast genus commonly found in kombucha.

Schizosaccharomyces — Fission yeast genus sometimes found in kombucha.

Lactobacillus (variable) — Lactic acid bacteria found in some kombucha cultures, in varying amounts.

Bacterial cellulose pellicle — The rubbery mat formed by bacteria such as Komagataeibacter; often called the SCOBY.

Yeast invertase splits sucrose — Yeast enzymes split sugar into glucose and fructose.

Yeast make ethanol — Yeasts ferment sugars into ethanol and CO2.

Bacteria oxidize ethanol to acetic acid — In kombucha, acetic acid bacteria convert the yeast's ethanol into acetic acid, giving its sourness.

Gluconic & glucuronic acids — Organic acids found in kombucha alongside acetic acid; their levels vary.

Sweet tea base (~50–100 g sugar/L) — Typical sugar range for the kombucha base.

Starter liquid (~10–20%) — Typical share of mature kombucha added to a new batch.

Initial pH ≤4.6 — Adding starter liquid to bring the sweet tea to pH 4.6 or lower to protect against pathogens.

F1: 7–14 days at ~20–29 °C — Typical first-fermentation duration and temperature range.

Finished pH ~2.5–3.5 — Typical acidity of finished kombucha.

F2: flavor & bottle — Second fermentation: flavorings are added and the kombucha is sealed in bottles to carbonate.

Refrigerate — Keeping kombucha cold to slow fermentation and carbonation.

Below 0.5% ABV = non-alcoholic (US TTB) — In the US, drinks with less than 0.5% ABV are not regulated as alcoholic beverages by the TTB.

Hard kombucha ≥0.5% (TTB-regulated) — At 0.5% ABV or more, kombucha is an alcoholic beverage under US federal rules.

ABV lab testing — Lab measurement of alcohol content, used to confirm kombucha stays under legal non-alcoholic limits.

Cold chain — Keeping kombucha refrigerated from production to sale to limit continued fermentation.

Yeast management — Controlling the yeast population to manage alcohol and flavor.

Fruit juice — Juice added in F2 for flavor and extra sugar.

Whole fruit — Pieces of fruit added during F2.

Herbs & botanicals — Plant flavorings used in kombucha.

Bottle conditioning — Carbonating beer (or other drinks) by refermentation in the sealed bottle.

Forced carbonation (kegging) — Carbonating kombucha by adding CO2 in kegs instead of bottle conditioning.

Mold (fuzzy, dry spots) — Fuzzy, dry, colored growth on kombucha that means the batch should be discarded.

Kahm yeast — Harmless but off-flavored film yeast that can form on ferments; flat and wrinkly, unlike fuzzy mold.

Fruit flies — Insects attracted to fermenting liquid; vessels are covered to keep them out.

Vinegar eels — Tiny nematodes (Turbatrix aceti) that can live in vinegar and kombucha.

Over-acidification — Fermenting too long, making kombucha very sour.

Food-safe vessels (no leaded glaze) — Kombucha's acidity can leach lead from some ceramic glazes, so glass or food-grade vessels are recommended.

Natural spring — Water from an underground source that flows naturally to the surface.

Artesian spring — Spring fed by a confined aquifer under pressure.

Glacier/icecap water — Bottled water sourced from glaciers or ice caps.

Low-mineral (<500 mg/L TDS) — In EU labeling, waters at or below 500 mg/L of dissolved solids may be called 'low mineral content'.

Medium-mineral — Mineral water with moderate dissolved solids, roughly between low-mineral and high-mineral levels.

High-mineral (>1500 mg/L TDS) — In EU labeling, waters with over 1,500 mg/L of dissolved solids may be called 'rich in mineral salts'.

Naturally carbonated mineral — Mineral water with CO2 from its own source.

Carbonated (added CO2) — Water with carbon dioxide added.

Seltzer — Plain water carbonated with CO2.

Distilled — Water boiled and recondensed, leaving minerals behind.

Reverse osmosis — Pushing water through a semi-permeable membrane to remove most dissolved solids.

Deionized — Water with ions removed by ion-exchange resins.

Alkaline (ionized) — Water with a raised pH, made by electrolysis or by adding minerals; its health claims are not well established.
Electrolyte-enhanced — Water with added minerals such as potassium and magnesium, often for taste.
Flavored/infused — Water with added flavors or fruit infusions.
Hydrogen water — Water infused with dissolved hydrogen gas; its health benefits are not well established.
Municipal tap water — Water from public supplies, treated to drinking standards.
Private well water — Household wells, which in the US are not regulated by the EPA and are the owner's responsibility to test.
Carbon-filtered — Water passed through activated carbon.
Boiled (point-of-use) — Boiling water at home to kill pathogens, e.g. under a boil-water advisory.
UV-treated — Water disinfected with UV light.
Confined aquifers — Groundwater layers sealed between impermeable rock or clay.
Unconfined aquifers — Groundwater layers open to recharge from the surface above.
Springs — Places where groundwater naturally emerges.
Artesian wells — Wells tapping a confined aquifer where water rises under its own pressure.
Surface water (lakes, rivers) — Water sources open to the air, needing more treatment than groundwater.
Glacial melt — Water from melting glaciers.
Desalination — Removing salt from seawater or brackish water, usually by reverse osmosis or distillation.
Coagulation & flocculation — Treatment steps that clump fine particles so they can settle or be filtered out.
Sedimentation — Letting particles settle out of water.
Sand filtration — Filtering water through sand beds to remove particles.
Activated carbon — Porous carbon that adsorbs chlorine, organic compounds and off-tastes from water.
Ion exchange (softening) — Swapping calcium and magnesium ions for sodium or potassium to soften water.
UV disinfection — Inactivating microbes with ultraviolet light.
Ozonation — Disinfecting water with ozone, common for bottled water.
Chlorination/chloramination — Disinfecting water with chlorine or chloramine, which persists longer.
Remineralization — Adding minerals back to purified water for taste and stability.
TDS (mg/L) — Total dissolved solids, measured in milligrams per liter.
Hardness (Ca, Mg) — Mainly calcium and magnesium content of water.
Alkalinity (bicarbonate) — Water's capacity to neutralize acid, mainly from bicarbonate.
pH — Measure of acidity or alkalinity; drinking water is usually around 6.5–8.5.
Sodium — Mineral in water that adds salty taste at higher levels.
Silica — Dissolved silicon dioxide, naturally present in many waters.
Nitrate — Water contaminant, often from fertilizer; the US EPA limit is 10 mg/L as nitrogen.
Conductivity — Electrical conductivity of water, a proxy for dissolved minerals.
US EPA (Safe Drinking Water Act) — US law under which the EPA sets standards for public drinking water.
US FDA bottled water (21 CFR 165.110) — FDA standard of identity and quality for bottled water, defining terms like spring, mineral and purified.
EU Natural Mineral Water Directive — EU rules (Directive 2009/54/EC) on recognizing, treating and labeling natural mineral waters.
WHO drinking-water guidelines — World Health Organization guidance on drinking-water safety.
SCA coffee water standard — Specialty Coffee Association water targets for brewing.
Tea (soft, low-mineral) — Soft, low-mineral water, generally preferred for brewing tea.
Brewing water profiles (see Beer Academy) — Cross-reference: city water profiles for brewing are covered in the Beer Academy.
Ice quality — Clarity, purity and density of ice, which affect drink dilution and taste.
100% juice — Product made only of juice (single- or from-concentrate), labeled 100% under FDA rules.
Juice from concentrate — Concentrate reconstituted with water to single strength.
Nectar — Juice beverage diluted with water and often sweetened, below 100% juice.
Juice drink/cocktail — Beverage containing some juice but less than 100%.
Smoothie — Blended whole fruit and/or vegetables, often with dairy or ice.
Lemonade — Lemon juice diluted with water and sweetened.
Limeade — Lime juice diluted with water and sweetened.
Fruit punch — Sweet mixed-fruit drink, often with little actual juice.
Not-from-concentrate (NFC) — Juice pasteurized and packed without being concentrated and reconstituted.
Fresh-squeezed (unpasteurized, warning label) — Untreated juice; in the US, packaged untreated juice must carry a warning label.
Flash-pasteurized — Juice heated briefly at high temperature, then cooled quickly.
Cold-pressed (HPP) — Cold-pressed juice treated with high pressure for safety and shelf life.

Frozen concentrate — Concentrated juice sold frozen and reconstituted with water at home.
Orange — The world's most consumed fruit juice.
Grapefruit — Bitter-sweet citrus juice; it interacts with some medications.
Lemon — Sour citrus juice used mainly as an ingredient.
Lime — Sour citrus juice.
Tangerine/mandarin — Sweet, easy-peeling citrus juice.
Blood orange — Orange with red flesh from anthocyanins, e.g. Moro and Tarocco.
Apple (cloudy/clear) — Apple juice sold either unfiltered (cloudy) or filtered and fined (clear).
Pear — Pear juice or nectar.
Tart cherry — Montmorency-type sour cherry juice.
Peach nectar — Peach purée diluted with water and sweetened.
Apricot nectar — Apricot purée diluted with water and sweetened.
Concord grape — American labrusca grape, the classic US grape-juice variety.
Cranberry — Very tart berry juice, usually sweetened or blended.
Pomegranate — Tart red juice from pomegranate arils.
Blueberry — Berry juice, usually blended or made from concentrate.
Açaí — Amazonian palm berry sold mainly as frozen pulp or blended drinks.
Elderberry — Dark berry juice; raw elderberries must be cooked before use.
Pineapple — Sweet tropical juice.
Mango — Tropical fruit, usually juiced as nectar or purée.
Passion fruit — Aromatic, tart tropical fruit juice.
Guava — Tropical fruit, usually made as nectar or purée.
Papaya — Tropical fruit, made as nectar or purée.
Coconut water — Clear liquid from young green coconuts.
Tomato — Juice of pressed or puréed tomatoes, often salted.
Carrot — Sweet vegetable juice rich in beta-carotene.
Beet — Earthy, deep-red root vegetable juice.
Celery — Vegetable juice pressed from celery stalks.
Green juice (kale/spinach/cucumber) — Juice of leafy greens and vegetables.
Mixed vegetable juice — Blend of vegetable juices, often tomato-based.
Valencia orange — Late-season juice orange and a top processing variety.
Hamlin orange — Early-season juice orange.
Pera orange (Brazil) — Main Brazilian juice orange variety.
Gala apple — Sweet apple cultivar from New Zealand.
Fuji apple — Sweet Japanese apple cultivar.
Honeycrisp apple — Crisp apple cultivar from the University of Minnesota.
Niagara grape — White labrusca grape used for white grape juice.
Wonderful pomegranate — Dominant US pomegranate cultivar.
Kent mango — Large, fiberless mango cultivar.
Alphonso mango — Prized Indian mango cultivar, much of it from Maharashtra, used for pulp and juice.
MD2 pineapple — Sweet, low-acid pineapple cultivar that dominates the fresh market.
Washing & sorting — Cleaning produce and removing damaged fruit before juicing.
Citrus extractors (JBT/FMC, Brown) — Industrial machines that extract citrus juice and peel oil.
Hydraulic press — Press that squeezes ground produce in bags or cloths under high pressure.
Belt press — Continuous press that squeezes fruit mash between moving belts.
Rack-and-cloth press — Traditional press with ground fruit wrapped in cloths and stacked on racks.
Decanter centrifuge — Horizontal centrifuge that separates juice from pulp.
Enzymatic maceration (pectinase) — Using pectinase enzymes to break down fruit pulp and increase juice yield.
Cold-press — Pressing juice from crushed produce without heat, typically with a hydraulic press.
Clarification & fining — Removing haze and solids from juice using enzymes, fining agents or filtration.
Deaeration — Removing dissolved oxygen from juice to limit oxidation.
HTST pasteurization — High-temperature short-time heat treatment of juice.
Hot-fill — Filling containers with hot juice to sterilize the package.
HPP (~600 MPa) — High-pressure processing: pressurizing packaged juice (about 600 MPa) to kill microbes without heat.
Evaporation (concentrate) — Removing water from juice by evaporation to make concentrate.
Aroma recovery — Capturing volatile aromas during concentration and adding them back later.
Aseptic storage — Sterile storage and packaging of heat-treated juice so it keeps without refrigeration.

Brix — Measure of dissolved sugar content, as percent sucrose by weight.

Brix/acid ratio — Ratio of sugar to acid, used as a ripeness and quality index, especially for citrus.

FDA Juice HACCP (5-log reduction) — FDA rule (21 CFR 120) requiring juice processors to achieve a 100,000-fold (5-log) reduction of the target pathogen.

Unpasteurized warning label — US-required warning on juice that hasn't been treated to kill pathogens.

Patulin limits (apple) — Patulin is a mold toxin in damaged apples. The FDA action level and the EU limit for apple juice are both 50 µg/kg.

% juice labeling (21 CFR 101.30) — US rule requiring beverages that claim to contain juice to state the percentage of juice on the label.

Whole milk (≥3.25% milkfat) — US whole milk must contain at least 3.25% milkfat.

Reduced-fat milk (2%) — Milk with 2% milkfat.

Low-fat milk (1%) — Milk with about 1% milkfat.

Fat-free/skim milk (<0.5%) — Milk with nearly all the fat removed.

Half-and-half (10.5–18% fat) — US cream product of 10.5–18% milkfat (21 CFR 131.180).

Light (coffee) cream (18–30%) — US cream with 18–30% milkfat.

Light whipping cream (30–36%) — US cream with 30–36% milkfat (21 CFR 131.157).

Heavy cream (≥36%) — US cream with at least 36% milkfat (21 CFR 131.150).

Whipping cream (30–36%, not std.) — Common label term for cream of about 30–36% fat.

Whipped cream (aerosol) — Cream dispensed from a can with nitrous oxide.

Sour cream — Cream cultured with lactic acid bacteria, at least 18% milkfat in the US.

Acidified sour cream — Sour-cream-like product made by acidifying cream instead of culturing it (21 CFR 131.162).

Sour half-and-half — Cultured half-and-half.

Acidified sour half-and-half — Half-and-half soured by adding acid instead of culturing it.

Crème fraîche — Cultured cream, thicker and less sour than sour cream.

Single cream (UK, ≥18%) — UK cream with at least 18% fat.

Double cream (UK, ≥48%) — UK cream with at least 48% fat.

Clotted cream (UK, ≥55%) — Thick cream made by gently heating cream and letting it cool slowly; at least 55% fat in the UK.

Dry cream — Powdered cream.

Evaporated milk — Milk with about 60% of its water removed, then canned and sterilized.

Sweetened condensed milk — Concentrated milk with added sugar.

Concentrated milk — Milk with water partly removed.

Nonfat dry milk — Powdered skim milk.

Dry whole milk — Powdered whole milk.

Cultured buttermilk — Low-fat or skim milk fermented with lactic cultures.

Acidified milk — Milk soured by adding food-grade acids instead of bacterial cultures.

Drinkable yogurt (yogurt base) — Thin, pourable yogurt.

See Fermented Academy: kefir, kumis — Cross-reference: kefir and kumis are covered in the Fermented Academy.

See Regional Academy: lassi, ayran, doogh — Cross-reference: lassi, ayran and doogh are covered in the Regional Academy.

Chocolate milk — Milk flavored with cocoa and sweetener.

Strawberry milk — Strawberry-flavored milk.

Vanilla milk — Vanilla-flavored milk.

Banana milk — Banana-flavored milk drink, popular in South Korea.

Coffee milk — Coffee-flavored milk drink, the state drink of Rhode Island.

Eggnog — Sweet drink of milk, cream, eggs and spices, sometimes with spirits.

Milkshake — Blended drink of milk and ice cream.

Raw (unpasteurized) — Milk not heat-treated; its sale is restricted or banned in many jurisdictions.

Pasteurized (HTST) — Milk heated to at least 72 °C for 15 seconds.

Vat (low-temperature) pasteurized — Batch pasteurization at 63 °C for 30 minutes.

Ultra-pasteurized — Milk heated to at least 138 °C for at least 2 seconds (US definition); still needs refrigeration.

UHT (aseptic, shelf-stable) — Ultra-high-temperature treatment, about 135–150 °C for a few seconds, packaged aseptically for shelf stability.

Homogenized — Milk whose fat globules have been reduced in size so the cream doesn't separate.

Non-homogenized (cream-top) — Milk with natural cream separation.

Lactose-free — Milk treated with lactase enzyme so its lactose is broken down.

A2 milk — Milk from cows producing only the A2 type of β-casein protein.

Ultra-filtered (high-protein) — Milk concentrated by membrane filtration for more protein and less sugar.

Organic (USDA NOP) — Milk certified under the USDA National Organic Program.

Grass-fed — Animals fed mainly on grass and forage; label standards vary.
Vitamin A & D fortified — Milk with added vitamins A and D.
Cow — Cow's milk, the dominant dairy milk worldwide.
Goat — Goat's milk, with smaller fat globules than cow's milk.
Sheep — Sheep's milk, rich in fat and protein.
Water buffalo — Buffalo milk, high in fat and used for mozzarella.
Camel — Camel milk, traditional in arid regions.
Yak — Yak milk, rich in fat and traditional in the Himalayas.
Donkey — Donkey milk, low in fat and close to human milk in composition.
Mare — Horse milk, traditionally fermented into kumis.
Oat — Plant milk made from oats.
Almond — Plant milk made from ground almonds and water.
Soy — Plant milk made from soybeans.
Coconut — Plant milk from coconut flesh and water.
Cashew — Creamy plant milk made from cashews.
Pea — Plant milk made from pea protein.
Hemp — Plant milk made from hemp seeds.
Macadamia — Plant milk made from macadamia nuts.
Flax — Plant milk made from flaxseed.
Hazelnut — Plant milk made from hazelnuts.
Pistachio — Plant milk made from pistachios.
Dairy coffee creamer (half-and-half based) — Flavored creamer made with milk and cream.
Non-dairy creamer (liquid) — Liquid coffee whitener made from oil, sugar and emulsifiers, often containing sodium caseinate.
Non-dairy creamer (powder) — Powdered coffee whitener made from oil, sugar and emulsifiers.
Oat creamer — Oat-based coffee creamer.
Almond creamer — Almond-based non-dairy coffee creamer.
Coconut creamer — Coconut-based coffee creamer.
Holstein-Friesian — Black-and-white dairy cow breed with the highest milk volume.
Jersey — Small dairy cow breed giving milk high in fat and protein.
Guernsey — Channel Islands cow breed with golden, high-fat milk.
Brown Swiss — Alpine-origin dairy cow breed whose milk is valued for cheesemaking.
Ayrshire — Scottish dairy cow breed, red and white.
Milking Shorthorn — Dual-purpose dairy cow breed.
Normande — French dual-purpose dairy cow breed.
Montbéliarde — French dairy cow breed used for Comté cheese.
Gir — Indian zebu dairy breed, heat-tolerant.
Sahiwal — Pakistani-Indian zebu dairy breed.
Saanen — Swiss dairy goat breed, the highest milk producer among goats.
Alpine — French-origin dairy goat breed, hardy and high-producing.
Nubian — Dairy goat breed with long, floppy ears and high-butterfat milk.
LaMancha — US dairy goat breed with very short ears.
Nigerian Dwarf — Small dairy goat breed with high-butterfat milk.
East Friesian (sheep) — German dairy sheep breed known for high milk yield.
Lacaune (sheep) — French dairy sheep breed whose milk is used for Roquefort.
Awassi (sheep) — Middle Eastern fat-tailed dairy sheep breed.
Pasture-based (grass-fed) — Dairy systems built around grazing.
Total mixed ration (TMR) — Blended complete feed for dairy cows.
Silage — Fermented, preserved forage feed.
Hay — Dried forage fed to dairy animals.
Free-stall housing — Barns where cows move freely between stalls, feed and water.
USDA organic (≥120 grazing days) — USDA organic rules require at least 120 days of grazing per year.
Herringbone parlor — Milking parlor where cows stand angled side by side.
Parallel parlor — Milking parlor where cows stand side by side and are milked from behind.
Rotary parlor — Rotating platform for milking many cows.
Robotic milking (AMS) — Automatic milking systems that cows visit voluntarily.
Teat dipping — Applying disinfectant to teats to prevent mastitis.
Somatic cell count (SCC) — Count of white blood cells in milk, an indicator of udder health.

Bulk tank cooling (≤7 °C / 45 °F) — Rapidly chilling raw milk in the farm tank, as required for Grade A milk.

Water (~87%) — Water makes up about 87% of cow's milk.

Fat (~3.5–4%) — Typical milkfat content of whole cow's milk.

Protein (~3.3%) — Typical protein content of cow's milk.

Casein (~80% of protein) — The main protein group in milk, about 80% of milk protein.

Whey proteins (~20%) — About 20% of milk protein is whey protein.

Lactose (~4.8%) — Typical lactose content of cow's milk.

Minerals (Ca, P) — Milk is a major dietary source of calcium and phosphorus.

A1 vs A2 β-casein — Two common variants of the milk protein β-casein. Some people report digesting A2 milk more comfortably; the evidence is still debated.

Fat globules — Microscopic droplets of milkfat surrounded by membranes.

Receiving & testing — Checking incoming milk for temperature, residues and quality.

Clarification — Centrifuging milk to remove sediment and some cells.

Separation (cream/skim) — Centrifugally separating cream from skim milk.

Standardization — Adjusting milkfat to a target level.

Homogenization — Forcing milk through small openings under pressure to shrink fat globules so cream does not separate.

HTST (72 °C / 15 s) — High-temperature short-time pasteurization: at least 72 °C for 15 seconds.

Ultra-pasteurization (≥138 °C / 2 s) — US ultra-pasteurization: heating to at least 138 °C for at least 2 seconds.

UHT aseptic — Milk treated at ultra-high temperature and packed sterile so it is shelf-stable.

ESL (extended shelf life) — Refrigerated milk processed with higher heat or microfiltration to last weeks longer than standard pasteurized milk.

Microfiltration — Membrane filtration that removes bacteria and extends shelf life.

Grade A (Pasteurized Milk Ordinance) — US standard for fluid milk under the FDA's Pasteurized Milk Ordinance (PMO).

Manufacturing grade (Grade B) — Milk for cheese, butter and powders rather than fluid sale.

Antibiotic residue testing — Required testing of milk, e.g. tanker loads, for drug residues before it is accepted.

Bacteria count limits — Maximum bacterial counts for raw and pasteurized milk set by standards such as the US Pasteurized Milk Ordinance.

Raw milk sales (state law) — In the US, raw-milk retail sales are set by each state; interstate sale for direct consumption is banned federally.

Soaking — Hydrating nuts, seeds or grains before milling them into plant milk.

Wet milling — Grinding soaked ingredients with water for plant milk.

Enzymatic hydrolysis (oat) — Using enzymes to break oat starch into sugars, making oat milk naturally sweet and smooth.

Filtering/decanting — Separating plant-milk liquid from the solid pulp.

Fortification (Ca, D, B12) — Adding nutrients such as calcium, vitamin D and vitamin B12, common in plant milks.

UHT — Ultra-high-temperature treatment, about 135–150 °C for a few seconds, packaged aseptically for shelf stability.

Oral rehydration solution (WHO ORS) — WHO formula of glucose and salts that uses sodium-glucose co-transport to rehydrate.

Isotonic sports drinks — Drinks with concentration similar to body fluids (about 6–8% carbohydrate), supplying fluid, sugar and electrolytes.

Hypotonic electrolyte drinks — Drinks less concentrated than body fluids, designed for fast fluid absorption.

Electrolyte powders/tablets — Mixes of sodium, potassium and other salts dissolved in water for hydration.

Probiotic shots — Small drinks containing live microorganisms; effects are strain-specific.

Prebiotic/fiber drinks — Drinks with added prebiotic fiber.

Apple cider vinegar drinks — Diluted apple cider vinegar drinks. Evidence for health effects is limited, and undiluted vinegar can harm tooth enamel.

Vitamin-enhanced water — Water with added vitamins and often sugar or sweeteners.

Collagen drinks — Drinks containing hydrolyzed collagen peptides, mostly marketed for skin and joints; the evidence is still emerging.

Ginger/turmeric shots — Small concentrated juice shots of ginger and turmeric.

Golden milk (turmeric latte) — Milk drink spiced with turmeric and other spices.

Mushroom elixirs (reishi/chaga) — Drinks made with medicinal-mushroom extracts; human evidence is limited.

Magnesium drinks — Drinks with added magnesium, often marketed for relaxation.

L-theanine drinks — Drinks containing L-theanine, an amino acid found in tea.

Melatonin drinks — Drinks containing the sleep hormone melatonin; their legal status differs by country.

Adaptogenic drinks (ashwagandha) — Drinks containing herbs marketed as 'adaptogens'. The term is not a recognized scientific or regulatory category, and the evidence varies by ingredient.

Oral nutritional supplements — Nutrient-dense drinks for people at risk of malnutrition.

Diabetes-specific formulas — Nutritional drinks formulated for blood-glucose management.

Infant formula — Breast-milk substitute regulated under strict nutrient requirements (e.g. 21 CFR 107 in the US).

Thickened liquids (IDDSI levels 1–4) — Drinks thickened to IDDSI levels (slightly to extremely thick) for people with swallowing difficulties.

Potassium — Electrolyte lost in sweat, included in rehydration drinks.

Chloride — Electrolyte that pairs with sodium in rehydration drinks.

Magnesium — Mineral involved in muscle and nerve function.

Calcium — Mineral essential for bones and muscle function, sometimes added to drinks.

Osmolality (hypo/iso/hypertonic) — Concentration of dissolved particles compared with body fluids.

Glucose-sodium co-transport (SGLT1) — Intestinal transporter that absorbs sodium together with glucose, pulling water along. This is the basis of oral rehydration therapy.

Probiotic strains (Lactobacillus, Bifidobacterium) — Common probiotic genera; benefits depend on the specific strain and dose.

Prebiotic fibers (inulin, FOS) — Fermentable fibers that feed beneficial gut bacteria.

Collagen peptides — Hydrolyzed collagen protein. It is low in some essential amino acids, so it is an incomplete protein.

Ashwagandha — Herb (Withania somnifera) from Ayurvedic tradition, studied for stress and sleep with mixed-quality evidence.

Curcumin (turmeric) — Main colored compound in turmeric. It is poorly absorbed on its own, and its health effects are still under study.

Acetic acid (vinegar) — The main acid in vinegar and the active component in vinegar drinks.

Conventional food vs dietary supplement (DSHEA) — The US Dietary Supplement Health and Education Act (1994) separates supplements from conventional foods, with different labeling and ingredient rules.

Structure/function claims — US claims about effects on the body's structure or function (not disease); supplements must carry a disclaimer.

FDA health claims — FDA-authorized claims linking a food substance to reduced disease risk, which require significant scientific agreement or qualified wording.

Supplement Facts vs Nutrition Facts — US supplements use a Supplement Facts panel, while foods and beverages use Nutrition Facts.

Medical foods — US category of foods for the dietary management of a disease, used under medical supervision.

Meta-analyses & systematic reviews — Studies that pool and evaluate many trials; usually the highest tier of evidence.

Randomized controlled trials — Experiments with random assignment to groups, giving strong evidence of cause and effect.

Observational studies — Studies that track people without intervening; they show associations, not causation.

Mechanistic & animal studies — Lab and animal research that suggests how something might work but doesn't prove effects in humans.

Expert opinion — The lowest tier of the evidence hierarchy.

Whey protein concentrate — Whey with roughly 34–80% protein.

Whey protein isolate — Whey processed to at least 90% protein, with most lactose and fat removed.

Hydrolyzed whey — Whey pre-digested into peptides for faster absorption; it tastes more bitter.

Micellar casein — Slow-digesting casein protein in its natural micelle form.

Milk protein isolate — Milk protein containing both casein and whey.

Soy isolate — Soy protein concentrated to about 90% protein; a complete protein.

Brown rice — Plant protein made from brown rice, often blended with pea.

Pumpkin seed — Protein made from pumpkin seed.

Blended plant protein — Mixes of plant proteins, such as pea and rice, that complement each other's amino acids.

Egg white protein — Protein powder made from dried egg whites.

Beef protein isolate — Protein powder made from hydrolyzed beef protein.

Powder (mix-in) — Protein sold as powder to mix into liquids.

Ready-to-drink (RTD) shake — Pre-made, shelf-stable protein drink.

Clear whey isolate drinks — Acidified, juice-like drinks made with whey isolate.

Protein coffee — Coffee drinks with added protein.

High-protein ultra-filtered milk — Milk concentrated by ultrafiltration so it has more protein and less lactose.

Meal replacement shake — Nutritionally complete shake designed to replace a meal.

Post-workout recovery — Protein and carbohydrate taken after exercise to support recovery.

Mass gainer — High-calorie protein and carbohydrate shake.

Weight management — Products marketed for satiety or calorie control.

Overnight (casein) — Casein taken before sleep for slow amino acid release.

Ultrafiltration — Membrane filtration that concentrates proteins.

Ion exchange — Whey isolate process that separates proteins by charge.

Enzymatic hydrolysis — Using enzymes to break proteins into smaller peptides.
Spray drying — Drying liquid protein into powder with hot air.
Instantizing (lecithin) — Coating powders with lecithin so they mix easily.
Concentrate (WPC 34–80%) — Whey protein concentrate containing about 34–80% protein.
Isolate (≥90% protein) — Protein ingredient containing at least about 90% protein.
PDCAAS — Protein Digestibility-Corrected Amino Acid Score, a protein-quality measure capped at 1.0.
DIAAS — Digestible Indispensable Amino Acid Score, a newer FAO-recommended protein-quality measure.
Leucine content — Leucine is an amino acid that triggers muscle protein synthesis; whey is rich in it.
Essential amino acids — The nine amino acids the body cannot make and must get from food.
Fast (whey) vs slow (casein) digestion — Whey is absorbed quickly, while casein clots in the stomach and digests slowly.
Branched-chain amino acids — Leucine, isoleucine and valine; essential amino acids marketed for muscle.
Heat stability (UHT RTD) — A protein's ability to survive UHT processing without gelling or settling.
Emulsifiers & stabilizers — Ingredients such as lecithin and gums that keep protein drinks smooth and stable.
Sweeteners — Sugars or non-nutritive sweeteners used in protein drinks.
Flavor masking — Hiding off-flavors of proteins with flavors and sweeteners.
Protein per serving — Grams of protein in one serving.
FDA protein claims (good/excellent source) — US labels: 'good source' means 10–19% of the Daily Value per serving, 'excellent source' means 20% or more.
Supplement vs conventional food — US regulatory distinction between supplements and ordinary foods or drinks, affecting labels and allowed ingredients.
NSF Certified for Sport — NSF program that tests supplements for contaminants and banned substances.
Informed Sport — Third-party testing program that screens supplements for banned substances.
Standard energy drink — Caffeinated carbonated drink, often with taurine and B vitamins.
Sugar-free/zero — Energy drinks sweetened with non-nutritive sweeteners.
Energy shots — Small, concentrated caffeine drinks.
Fitness/performance energy — Energy drinks marketed for exercise.
Natural/organic energy — Energy drinks using natural caffeine sources such as tea or guayusa.
Caffeine anhydrous — Dehydrated, purified caffeine powder used in drinks and supplements.
Guarana — Amazonian plant whose seeds are a natural caffeine source.
Green coffee extract — Caffeine source from unroasted coffee.
Green tea extract — Caffeine and catechin source from green tea.
Guayusa — Caffeinated holly leaf (Ilex guayusa) from Ecuador.
Kola nut — Caffeine-containing nut from West Africa.
Stimulant pre-workout — Pre-workout with caffeine and other stimulants.
Stim-free (pump) pre-workout — Pre-workout without stimulants, focused on blood flow.
Beta-alanine — Amino acid that raises muscle carnosine; it causes a harmless tingling (paresthesia).
Creatine monohydrate — Well-researched supplement that improves high-intensity exercise performance.
L-citrulline — Amino acid in pre-workouts, studied for blood flow.
Canned cold brew — Ready-to-drink cold brew coffee in cans.
Nitro coffee — Coffee infused with nitrogen.
RTD tea — Ready-to-drink tea.
Caffeinated sparkling water — Sparkling water with added caffeine.
Caffeine + L-theanine — Combination studied for focus; theanine may soften caffeine's jitteriness.
Citicoline/Alpha-GPC drinks — Drinks with choline compounds marketed for cognition; the evidence is limited.
Lion's mane drinks — Drinks with Hericium erinaceus mushroom extract; human evidence is limited.
Adenosine receptor antagonism — Caffeine blocks adenosine receptors in the brain, reducing feelings of tiredness.
Half-life (~3–7 h) — Typical caffeine half-life in healthy adults; it varies widely.
~80 mg per 250 mL can — Typical caffeine in a standard 250 mL energy drink.
FDA: ~400 mg/day healthy adults — The FDA cites 400 mg of caffeine a day as an amount not generally associated with negative effects in healthy adults.
EFSA: 200 mg single dose — EFSA concluded that single caffeine doses up to 200 mg are of no safety concern for healthy adults.
CYP1A2 metabolism — Liver enzyme that metabolizes most caffeine; genetic variation affects how fast caffeine is cleared.
Taurine — Amino sulfonic acid commonly added to energy drinks.
B vitamins — Vitamins involved in energy metabolism; they are not stimulants.
Glucuronolactone — Naturally occurring compound added to energy drinks.
Ginseng — Panax root extract, common in energy drinks.

L-carnitine — Compound involved in fat transport into cells, often added to energy drinks.
Sugar vs non-nutritive sweeteners — Choice between caloric sugar and zero-calorie sweeteners.
Electrolytes — Minerals added to some energy and fitness drinks.
Beverage vs supplement labeling — In the US, energy products can be sold as beverages (Nutrition Facts) or as supplements (Supplement Facts).
Caffeine disclosure — Stating caffeine content on labels, required in some markets and voluntary in others.
EU 'high caffeine content' label (>150 mg/L) — EU rule requiring a high-caffeine warning on drinks with more than 150 mg/L of caffeine, with tea and coffee exempt.
Restrictions on sales to minors (some countries) — Some countries, such as the UK in England and Latvia, restrict energy-drink sales to minors.
Cola — Soft drink originally flavored with kola nut, now typically vanilla, citrus and spice.
Lemon-lime — Citrus soda style, e.g. Sprite or 7 Up.
Root beer — North American soda traditionally flavored with sassafras root bark; commercial versions use safrole-free flavoring.
Ginger ale (dry/golden) — Ginger-flavored carbonated soft drink; dry (Canadian) and golden styles.
Cream soda — Vanilla-flavored soft drink.
Orange soda — Orange-flavored soft drink.
Grape soda — Grape-flavored soft drink.
Pepper-style soda — Soda style in the Dr Pepper family.
Birch beer — Soda flavored with birch bark or oil, related to root beer.
Sarsaparilla — Soda traditionally flavored with sarsaparilla root.
Tonic water — Carbonated soft drink flavored with quinine.
Club soda — Carbonated water with added minerals.
Bitter lemon — Lemon-flavored tonic-style soda containing quinine.
Ginger beer (soft) — Spicy, non-alcoholic ginger soda.
Prebiotic soda — Soda with added prebiotic fiber.
Probiotic soda — Soda with added live cultures.
Craft cane-sugar soda — Small-batch sodas sweetened with cane sugar.
Diet/zero-sugar soda — Soda sweetened with non-nutritive sweeteners.
Italian soda — Flavored syrup mixed with sparkling water.
Sparkling juice — Carbonated fruit juice.
Squash (UK fruit concentrate) — Concentrated fruit drink diluted with water.
Cordial — Concentrated sweetened fruit syrup; in some countries the word also means a liqueur.
Drinking vinegar (shrub syrup) — Fruit-and-vinegar syrup diluted into drinks.
Soda syrup — Concentrated flavored syrup for making soda.
Forced carbonation (CO_2) — Dissolving CO_2 into liquid under pressure.
Natural carbonation (bottle-conditioned) — CO_2 produced by fermentation inside the sealed bottle.
Nitrogenation (nitro) — Infusing drinks with nitrogen for small bubbles and a creamy texture.
Post-mix (fountain) — Syrup and carbonated water mixed when served.
Pre-mix (bottle/can) — Soda fully mixed and carbonated before packaging.
CO_2 solubility (Henry's law) — More CO_2 dissolves in colder liquid and under higher pressure.
Volumes of CO_2 — Measure of carbonation: liters of CO_2 dissolved per liter of liquid.
Soda ~2.5–4 volumes — Typical carbonation level of soft drinks.
Temperature & pressure — Key variables that control carbonation.
Carbonic acid — Weak acid formed when CO_2 dissolves in water, adding bite.
Nucleation & bubble retention — Bubbles form at nucleation sites; temperature and surface affect how long fizz lasts.
Simple syrup — Sugar dissolved in water, often 1:1.
Flavor concentrates & emulsions — Concentrated flavorings; emulsions disperse oil-based flavors such as citrus oils in water.
Throw ratio (e.g. 1:5) — Ratio of syrup to water in finished soda.
Brix targets — Target sugar levels in syrup or finished soda.
Batch mixing — Combining syrup ingredients in batches before filling.
Bag-in-box (post-mix) — Syrup packed in bags inside boxes for fountain systems.
Sucrose (cane sugar) — Table sugar from sugarcane or sugar beet.
HFCS 55 — High-fructose corn syrup with about 55% fructose, the common US soda sweetener.
Aspartame — Low-calorie sweetener about 200 times sweeter than sugar. People with phenylketonuria (PKU) must avoid it.
Sucralose — Zero-calorie sweetener about 600 times sweeter than sugar.
Acesulfame K — Zero-calorie sweetener about 200 times sweeter than sugar, often paired with others.

Stevia (Reb M) — Sweetener from the stevia leaf; Reb M is a better-tasting steviol glycoside.
Monk fruit — Zero-calorie sweetener from luo han guo fruit extract (mogrosides).
Erythritol — Sugar alcohol with nearly zero calories.
Allulose — Rare sugar with very few calories; it is about 70% as sweet as sugar.
Phosphoric acid (colas) — Acid that gives colas their sharp tang.
Citric acid — Common soda acidulant that gives citrus-like sourness.
Malic acid — Acid found naturally in apples, used in sodas.
Tartaric acid — Grape-derived acid sometimes used in drinks.
Sodium benzoate — Preservative effective in acidic drinks.
Potassium sorbate — Preservative that inhibits mold and yeast.
Glass bottle — Inert, reusable or recyclable soda container.
Aluminum can — Lightweight, recyclable can that blocks light and oxygen.
PET bottle — Plastic soda bottle; it is slightly CO2-permeable, so it has a shorter carbonation shelf life.
Fountain (post-mix) — Soda mixed from syrup and carbonated water at the point of service.
Keg — Pressurized container for draft drinks.
Junmai Daiginjo — Pure-rice sake with rice polished to 50% or less.
Daiginjo — Premium sake grade with rice polished to 50% or less.
Junmai Ginjo — Pure-rice sake with rice polished to 60% or less.
Ginjo — Premium sake grade with rice polished to 60% or less of its original size.
Tokubetsu Junmai — 'Special' junmai sake made with extra polishing or a special method.
Tokubetsu Honjozo — 'Special' honjozo sake made with extra polishing or a special method.
Junmai — Sake made only from rice, koji, water and yeast, with no added distilled alcohol.
Honjozo — Sake with a small permitted addition of distilled alcohol and rice polished to 70% or less.
Futsushu (table sake) — Ordinary sake outside the premium designations.
Nigori — Coarsely filtered, cloudy sake.
Namazake — Unpasteurized sake.
Genshu — Undiluted sake.
Taruzake — Sake aged in cedar casks.
Sparkling sake — Carbonated sake.
Kimoto — Traditional labor-intensive sake yeast-starter method relying on natural lactic acid bacteria.
Yamahai — Sake starter method like kimoto but without pole-ramming the mash.
Modern/standard cider — Cider from dessert apples or concentrate, often filtered and carbonated.
Heritage cider — Cider from traditional or heirloom apple varieties.
English cider — Cider tradition of western England, using bittersweet apples.
French cidre (Normandy/Brittany) — French cider, often made by keeving.
Spanish sidra (Asturias/Basque) — Tart, still cider from northern Spain, poured from a height.
Ice cider (cidre de glace) — Quebec dessert cider made from concentrated frozen apples or juice.
Hopped cider — Cider dry-hopped for aroma.
Modern perry — Pear cider made from dessert or culinary pears.
Traditional perry (perry-pear varieties) — Perry made from tannic perry-pear varieties.
Traditional mead (dry/semi-sweet/sweet) — Mead made from honey, water and yeast only.
Melomel (fruit) — Mead made with fruit.
Cyser (apple) — Mead made with apples or apple juice.
Pyment (grape) — Mead made with grapes or grape juice.
Metheglin (spice) — Mead made with spices.
Braggot (malt) — Mead made with malt, a mead–beer hybrid.
Sack mead — Strong, sweet mead.
Hydromel (session) — Light, low-alcohol mead.
Taruzake (Japanese cedar, sugi) — Sake aged in Japanese cedar casks.
Barrel-aged cider (ex-bourbon/rum) — Cider matured in used spirit barrels.
Normandy/Asturian cider in oak vats — Traditional cider fermented or matured in old oak vats.
Barrel-aged mead — Mead matured in barrels.
Milk kefir — Fermented milk made with kefir grains, a mix of bacteria and yeasts in a kefiran matrix.
Kumis (mare's milk) — Fermented mare's milk, traditional in Central Asia.
Drinkable yogurt — Pourable fermented milk.
Lactobacillus fermented milk drink — Milk fermented with Lactobacillus strains, e.g. Yakult-style drinks.
Kvass — Eastern European low-alcohol fermented drink, traditionally from rye bread.

Boza — Thick, low-alcohol fermented grain drink of Turkey and the Balkans.
Amazake — Sweet, low- or non-alcoholic Japanese drink made from rice koji, or from sake lees.
Makgeolli — Korean milky rice wine.
Chicha de jora — Andean fermented drink of malted corn.
Water kefir (tibicos) — Fermented sugar-water drink made with water kefir grains.
Tepache — Mexican drink fermented from pineapple peels.
Pulque — Mexican fermented drink of agave sap (aguamiel).
Ginger beer (ginger bug) — Fermented ginger drink started with a 'ginger bug' culture.
Palm wine — Fermented palm sap, drunk across Africa and Asia.
Kefir grains (kefiran matrix) — Gelatinous clusters of bacteria and yeasts held together by the polysaccharide kefiran.
Lactobacillus kefiranofaciens — Bacterium that produces kefiran in kefir grains.
Lactococcus — Lactic acid bacteria used in dairy fermentation.
Leuconostoc — Lactic acid bacteria found in kefir and vegetable ferments.
Yeasts (Saccharomyces, Kluyveromyces) — Yeasts found in kefir and other fermented milks.
Water kefir grains (dextran) — Crystal-like cultures held together by dextran.
Aspergillus oryzae (yellow koji) — Yellow koji mold used for sake, miso and soy sauce.
Aspergillus luchuensis (black koji, awamori) — Black koji mold that produces citric acid, used for awamori and much shochu.
Aspergillus sojae — Koji mold used for soy sauce.
Koji making (seikiku) — Growing Aspergillus oryzae mold on steamed rice to produce enzymes that convert starch to sugar.
Saccharification — Converting starch into fermentable sugars.
Yamada Nishiki — The most famous sake rice, from Hyōgo.
Omachi — Heirloom sake rice from Okayama.
Gohyakumangoku — Major Japanese sake rice from Niigata.
Miyama Nishiki — Cold-tolerant sake rice from northern Japan.
Seimaibuai (polishing ratio) — Rice polishing ratio: the percentage of the rice grain remaining after milling.
Daiginjo ≤50% — Daiginjo sake uses rice polished to 50% or less.
Ginjo ≤60% — Ginjo sake uses rice polished to 60% or less.
Shinpaku (starchy heart) — Opaque, starchy core of sake rice grains.
Washing & soaking — Washing polished rice and soaking it before steaming.
Steaming — Cooking rice by steaming.
Koji making — Growing Aspergillus oryzae mold on steamed rice to produce enzymes that convert starch to sugar.
Shubo/moto (yeast starter) — Small, concentrated yeast starter for sake.
Sandan shikomi (3-stage addition) — Adding rice, koji and water to the sake mash in three stages over four days.
Moromi (main mash) — Main sake fermentation mash.
Multiple parallel fermentation — Sake fermentation in which koji converts starch to sugar while yeast ferments it, in the same tank.
Pressing (jōsō) — Separating sake from its lees.
Hi-ire (pasteurization) — Gentle pasteurization of sake, usually done twice.
Sokujō-moto — Modern quick sake starter that uses added lactic acid.
Yamahai-moto — Yamahai yeast starter.
Bodaimoto — Ancient sake yeast-starter method from Nara using lactic-fermented rice water.
Sweet apples — Low-tannin, low-acid apples.
Sharp apples — Cider apples high in acid and low in tannin.
Bittersweet apples — Cider apples high in tannin and low in acid.
Bittersharp apples — Cider apples high in both tannin and acid.
Milling & pressing — Grinding fruit and pressing out juice.
Wild vs cultured yeast — Spontaneous fermentation versus inoculated fermentation.
Keeving — Traditional cider method that removes pectin and nutrients to leave a naturally sweet cider.
Malolactic fermentation — Bacterial conversion of sharp malic acid into softer lactic acid, usually after alcoholic fermentation.
Traditional method (cider) — Sparkling method in which the second fermentation happens in the bottle sold (as in Champagne and Cava).
Back-sweetening — Adding sweetness after fermentation is finished.
Honey varietals — Single-flower honeys such as orange blossom, which shape a mead's flavor.
Must preparation — Mixing honey and water, often with nutrients, to make mead must.
Staggered nutrient additions (SNA) — Adding yeast nutrients in steps during mead fermentation.

Yeast selection — Choosing yeast strains for flavor and alcohol tolerance.
Degassing — Releasing CO2 from fermenting mead or wine.
Stabilize & back-sweeten — Stopping yeast activity, then sweetening.
Sake · no legal aging minimum — Sake: official/legal aging category. Requirement: no legal aging minimum. Times are minimums unless stated; see facts for barrel/bottle detail and source.
Koshu (aged sake) · informal/trade term — Koshu (aged sake): official/legal aging category. Requirement: informal/trade term. Times are minimums unless stated; see facts for barrel/bottle detail and source.
Cider & perry · no legal aging minimum — Cider & perry: official/legal aging category. Requirement: no legal aging minimum. Times are minimums unless stated; see facts for barrel/bottle detail and source.
Horchata (Mexican rice) — Mexican drink of soaked, blended rice with cinnamon.
Agua fresca — Mexican drink of fruit, grains or flowers blended with water and sugar.
Chicha morada — Peruvian drink of purple corn boiled with fruit and spices.
Yerba mate — South American infusion of dried Ilex paraguariensis leaves, traditionally drunk from a gourd.
Tereré — Paraguayan cold-brewed yerba mate.
Champurrado — Chocolate atole.
Atole — Mexican hot drink of corn masa, water or milk, and sweetener.
Tejate — Oaxacan drink of corn and cacao.
Aguapanela — Colombian drink of panela (unrefined cane sugar) dissolved in water.
Bubble tea (boba) — Taiwanese tea drink with tapioca pearls.
Masala chai — Indian tea simmered with milk, sugar and spices.
Lassi — Indian yogurt-based drink, sweet or salty.
Thai iced tea — Spiced black tea with condensed milk over ice.
Vietnamese iced coffee (cà phê sữa đá) — Phin-dripped coffee with condensed milk over ice.
Hong Kong milk tea — Strong black tea strained through cloth, served with evaporated or condensed milk.
Teh tarik — Malaysian 'pulled' milk tea.
Sikhye — Korean sweet rice drink made with malted barley.
Barley tea (mugicha/boricha) — Roasted barley infusion, popular in Japan and Korea.
Ayran — Salted yogurt drink of Turkey and nearby regions.
Doogh — Iranian savory yogurt drink, often carbonated and with mint.
Jallab — Levantine drink of grape molasses, dates and rose water.
Sahlab — Hot milk drink thickened with orchid-tuber flour or starch.
Moroccan mint tea — Green tea with fresh mint and sugar.
Qahwa (Arabic coffee) — Light-roast coffee spiced with cardamom.
Bissap/karkadé (hibiscus) — Hibiscus drink of West Africa (bissap) and Egypt and Sudan (karkadé).
Sobia — Saudi Ramadan drink, often of fermented bread or barley.
Tamarind drink — Sweet-sour drink made from tamarind pulp.
Horchata de chufa (Valencia) — Valencian drink of tiger nuts soaked and pressed with water and sugar.
Kompot — Eastern European drink of fruit boiled in sweetened water.
Sbiten — Russian hot honey-spice drink.
Elderflower cordial — Syrup made by steeping elderflowers in sugar syrup.
Mulled wine (Glühwein) — Hot spiced wine.
Egg cream (New York) — Drink of milk, seltzer and chocolate syrup; it contains no egg.
Switchel (New England) — Drink of water, vinegar, ginger and a sweetener.
Sweet apple cider (unfiltered) — US non-alcoholic unfiltered apple juice.
Root beer float — Root beer with vanilla ice cream.
Hot chocolate — Hot drink of cocoa or chocolate with milk or water.
Sorrel (Jamaica) — Caribbean Christmas drink of hibiscus (sorrel) with ginger and spices.
Mauby — Caribbean bittersweet drink made from mauby tree bark.
Sea moss drink — Caribbean drink of sea moss (seaweed), milk and spices.
Peanut punch — Caribbean peanut and milk drink.
Kava (Fiji/Vanuatu/Tonga) — Pacific drink of ground kava root mixed with water, with mildly sedative effects.
Mate: gourd & bombilla — Preparation: yerba mate in a gourd, sipped through a filtered straw (bombilla).
Tereré: cold water/juice infusion — Preparation: yerba mate infused with cold water or juice.
Horchata: soaked rice & cinnamon — Preparation: rice soaked with cinnamon, blended and strained.
Chicha de jora: malted corn ferment — Andean fermented drink of malted corn.
Chicha morada: purple corn boil — Peruvian drink of purple corn boiled with fruit and spices.
Atole: masa cooked in water/milk — Preparation: corn masa simmered with water or milk until thick.
Boba: tapioca pearls boiled & sugared — Preparation: tapioca pearls boiled, then soaked in syrup.

Masala chai: tea simmered with milk & spices — Indian tea simmered with milk, sugar and spices.

Teh tarik: 'pulled' between vessels — Preparation: tea poured repeatedly between vessels to froth and cool it.

Thai tea: cloth-filter brew — Preparation: tea brewed through a cloth filter.

Cà phê sữa đá: phin drip on condensed milk — Preparation: strong phin-dripped coffee over sweetened condensed milk and ice.

Horchata de chufa: tiger nuts macerated — Valencian drink of tiger nuts soaked and pressed with water and sugar.
